General Comment

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It would make the world a more dangerous place and increase the number of firearms thereby increasing crime and adding to the unsafe conditions that can cause increased migration.

General Comment

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose the rule change.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

To keep ALL Americans safe, this MUST never be allowed to happen!! Thank you!

I am writing to express concern with the proposal to change the regulation of arms exportation from the State Dept to the Commerce Dept. I have always felt shame that the US is responsible for more exportation of weapons to all parts of the world than any other country. Many times it is clear we have actually armed both sides of a disagreement and we have armed our own enemies. We should promote conflict resolution and not violence. Moving control of munitions export to Commerce just makes it abundantly clear that our own motivations are profit and not safety, diplomacy or democracy. Please oppose this proposed rule.

I oppose this rule change switching the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Such a switch would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms exports should remain under the regulation of the U.S. State Department. Thank you.

I vehemently DO NOT agree with the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This is a dangerous proposal, as It would eliminate the State Departments Blue Lantern program on inspections and reports. It would also remove licensing requirements for brokers, increasing the risk of trafficking tremendously. DO NOT CHANGE THE RULE.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It's quite obvious that this rule change is simply a blind to bring more firearms into the U.S., and we definitely do not need more assault type weapons in the hands of civilians. There have been enough deaths and misery caused by assault weapons and the mentally ill or terrorists who were able to buy them. Please do not allow this rule change to go through.

We should not have the NRA, and U.S. gun manufacturers, selling guns outside this country. Too often, these guns end up being used in wars around the world. You think fireworks on the 4th of July are dangerous? They are nothing compared to the killing and destruction of wars, which are aided when the NRA, and U.S. gun manufacturers are selling guns to foreign governments and private individuals in other countries.

Moving the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business) would open new floodgates for arms sales internationally, with serious implications for our national security.
Please do not make this change!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S.

Commerce Department. Congress would no longer be automatically informed about sizable weapons sales that it could

stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of

Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist

organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

We would be fools to allow weapons to be sold on the international markets. This could be used by terrorist organizations as a means to arm large numbers of combatants hell bent to create havoc and kill innocent people.

This is another NRA scheme to increase the sales of weapons by the gun manufacturers.

The NRA is a disreputable advocacy organization and is responsible for the gun violence in our country and should not be curried any favors.

General Comment

As a citizen of the United States, I am very concerned about gun violence and our exporting of this violence by selling guns to other countries. I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government -- i.e., taxpayers -- will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking.
5. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-

shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

6. The Commerce Department does not have resources to enforce export controls, even before the addition of 30,000 firearms export licenses as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

7. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

General Comment

I am writing to strongly oppose this rule change that would switch the regulation of firearms exports from the U.S. State Department to the U.S. Commerce Department.

This rule change has the potential to harm both national security and international human rights. For example, with the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department simply does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large quantities of American guns and ammunition.

Thus, switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would be dangerous and irresponsible, and must not go forward.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer. It seems your department is forgetting that immigrants are entering America through its southern border requesting asylum from their home countries due to gang violence. Remember these gangs and other violent people are receiving their guns from America more often than from any other country. Hence, the only reason for more easily allowing guns made in America to be shipped across its border is because there is no perceived threat to America's border security by your department. If that is so then I fully expect your department to declare that there is no increased security threat to America's southern border and to vigorously denounce any actions to increase funding for border security, including for more personal or for building more walls on America's southern border.

I oppose the change from State Dept to Commerce Dept.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them

It would remove licensing requirements for brokers, increasing the risk of trafficking

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

I am writing to express my opposition to switching the regulation of firearms exports from the State Department to the Commerce Department. I believe this would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I think this change would make the world a far more dangerous place and here are my reasons why:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

1. It would remove licensing requirements for brokers, increasing the risk of trafficking.

3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not make this change.

Thank you,

Valerie Leonard

General Comment

I live in Lebanon, Oregon and am a member of the United Church of Christ, which is active in peace and justice issues. I have gone on several trips to Latin America, and this past April I was part of a Witness for Peace delegation that traveled to Mexico and spent 10 days in Oaxaca and Mexico City. We talked to several people representing indigenous groups and others who face violence and repression on a regular basis. One common theme we heard was that the perpetrators of violence are using weapons obtained from the U.S., either legally through the Merida Initiative, or illegally by smuggling arms across the border. Arms used in crimes have been traced back to U.S. manufacturers through their serial numbers. Once the arms reach Mexico there is little oversight of their distribution, and they wind up in the hands of armed militias, secret security forces and cartels. The result is that Mexico has one of the highest homicide rates in the world. For the safety and security of the Mexican people, Mexico needs fewer arms, not more, and more control on the guns sent there, not less control.

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. Regarding wide retail availability of firearms, about which comment has been requested, many countries, including Mexico, prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Treating semi-automatic assault rifles as non-military would only increase the number of these deadly arms reaching local police forces, who are supposed to protect civilians, not assault them. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. Human rights abuses in Mexico are not well-known outside the country and eliminating Congressional oversight would make it more difficult to identify the abusers. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items

moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

3. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

4. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. Knowing the total amount of firearms deliveries is important in examining the relationship between the number of guns and the amount of violence in a country.

5. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Leave the regulation of firearms and ammunition under the State Department.

Sincerely,

Kenneth Crouse

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

Dear sir or madame:

I want to protest vigorously any plans to switch the regulation of firearms exports away from the State Department to the Commerce Department. The latter is clearly not equipped to assess the potential impacts of firearms sales to nations where there are rampant civil rights abuses, drug cartel operations, political violence, or just plain high rates of violence. State is much better equipped and focussed to concentrate on our security and the reduction of violence fueling the high rates of mass immigration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Thank you for considering my thoughts about this!

Sincerely,

Lewise Busch

Switching regulations of firearms export from US State Dept to US Commerce Dept is a terrible idea. After all the gun tragedies, how can this even be considered. It would increase arms sales internationally and impact national security.

Please do not turn over the regulation of firearms exports to the Commerce department; let the State dept.continue to handle it.

Letting Commerce do this could lead to huge quantities of firearms winding up in the hands of countries which constantly violate human rights.

Sincerely,

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

I object to the international trade in firearms shifting from the Department of State to the Commerce Department. We need to keep control of where the arms and what type of arms are going, what they will be used for, and whether the use is consistent with US values. The Commerce Department is charged with selling the US commerce, not in making value judgements on our exports. Do not transfer our arms sales to the Commerce Department.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

The public comment period for this rule change ends on July 9.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

HERES THE LOW DOWN: Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations, and suicides. They should be subject to more controls, not less!

Here is how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Please reject this terrible change

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls.

Its Bureau of Industry and Security does not have staff everywhere.

This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous.

They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

They should be subject to more controls, not less!

A July 5, 2017, article in the Proceedings of the National Academy of Sciences identifies that Earth is in the midst of its sixth mass extinction episode: Biological annihilation via the ongoing sixth mass extinction signaled by vertebrate population losses and declines.

The article concludes: "...Earth's sixth mass extinction episode has proceeded further than most assume. ... (T)he proximate causes of population extinctions (are): habitat conversion, climate disruption, overexploitation, toxification, species invasion, disease, and (potentially) large-scale nuclear war ... (T)he ultimate drivers of those immediate causes of biotic destruction (are), namely, human overpopulation and continued population growth, and overconsumption, especially by the rich. ... (T)he sixth mass extinction is already here and the window for effective action is very short, probably two or three decades at most. All signs point to ever more powerful assaults on biodiversity in the next two decades, painting a dismal picture of the future of life, including human life."

<https://www.pnas.org/cgi/doi/10.1073/pnas.1704949114>

Fascism, a governmental system run by a dictator, exalts the state and race above the individual.

Fascism enforces severe economic and social regimentation.

Fascism enables mega-businesses / wealthy economic predators who support the dictator to profit from exploiting / harming / enslaving / killing scapegoats -- the "other."

Fascism creates special privileges for its wealthy supporters -- in this case weapons dealers and the NRA, both of whom contribute inordinate dark money to the Republican majority in Congress and the current occupant of the White House.

Does the U.S. Department of State want to accelerate Earth's sixth mass extinction episode with a world-wide blood bath that enriches U.S. arms dealers and the NRA?

I STRONGLY OPPOSE Trump's proposal to move export license oversight for firearms from the Department of State to the Department of Commerce THAT WOULD PROMOTE TERRORISM by making firearms seem like just another commercial commodity for the Dept. of Commerce to rubber-stamp.

The Dept. of State knows what's going on in other countries, so the Dept. of State should continue its oversight power.

Trump's proposed rule change treats semiautomatic assault rifles as non-military. WHAT BALONEY!!!!
U.S. troops routinely use their military rifles in semiautomatic mode.
Foreign militaries and TERRORISTS use them.
TRUMP WANTS FOREIGN DICTATORS AND TERRORISTS TO GET EASIER ACCESS TO GUNS!!!!!!!!!!!!!!!!!!!!

The proposed rule also eliminates Congressional oversight for important gun export deals. WE NEED OVERSIGHT!

The rule IMPOSES COSTS UPON TAXPAYERS that gun manufacturers should pay (costs of processing licenses).

The rule allows unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

PROTECT HUMAN RIGHTS!!!! PREVENT TRUMP FROM ARMING TERRORISTS!!!!

STOP THIS INCREDIBLY RECKLESS AND STUPID RULE!!!!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Dept. to the U.S. Commerce Dept. because it would undermine the safety of the United States and its citizens. The Commerce Dept. cannot appropriately keep guns out of the hands of gun traffickers, terrorists, or human rights abusers, among others.

General Comment

I am writing against the proposed rule change to switch the regulation of firearms exports from the State Department to the Commerce Department. This change would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

More specifically, the rule change would weaken the control of arms shipments by doing the following:

- 1) eliminating the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them;
- 2) removing licensing requirements for brokers, increasing the risk of trafficking; and
- 3) removing the State Departments block on the 3D printing of firearms.

General Comment

I am writing to strongly and vehemently oppose the proposed rule change.

Switching the regulation of firearms exports from the State Department to the Commerce Department facilitates firearms exports to oppressive regimes, removes safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuels violence that destabilizes countries and causes mass migration.

This rule change eliminates the Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It removes licensing requirements for brokers, increasing the risk of trafficking.

It removes the block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Do not make this change. It opens the door to more violence and death worldwide.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I oppose the transfer of regulatory power over automatic weapons from the State Department to the Commerce Department. Such a change will reduce the check on the sale of dangerous weapons to the hands of authoritarian regimes and criminals. The State Department has a better ability to take into account interests of the United States foreign policy and values than the Commerce Department does.

General Comment

This is one of the worst ideas that the government has ever come up with. Selling semi-automatics to other countries just encourages despots and dictators to use violence to take away rights of those people who are trying to gain freedoms that we have in the united states. This proves how influential the NRA is by using money to influence politicians that are in congress. This is not what the united states is about. The united states is supposed to encourage other countries to set up democracies throughout the world.

I can think of no greater danger to the world and its peace than for the United States to treat the world as simply one gigantic single-person gun market. Somebody apparently thinks that an armed society is a polite society, and has forgotten South Sudan and Ethiopia.

I am entirely opposed to any rule change that would declassify firearms as military and/or that would result in a change of the regulation of firearms exports from the U.S. Department of State to the U.S. Commerce Department. This proposed change would dramatically endanger our national and international security.

The safeguards that are in place, including the Blue Lantern program, licensing and inspection policies, a block on the 3D printing of firearms, along with congressional and public oversight that exists because the U.S. Department of State oversees the export of firearms cannot be underestimated in our global security.

It is important to keep the regulations of firearms within the jurisdiction of the U.S. Department of State.

General Comment

I strongly oppose the proposed rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

At present, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security, and for the security of numerous nations around the world.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This would be an extremely wrong-minded and harmful change.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Thank you for taking action to help make our country and our world a safer place. Vote against the proposed new rule!

Bad idea!

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose switching the review of arms sales from the State Department to the Department of Commerce.

Congress would lose the ability to block sizable weapons sales, which means that countries with serious human rights violations could import weapons unimpeded.

Additionally, the Commerce Department does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

America has a gun problem; let's not export that problem to other nations.

General Comment

I oppose switching the regulation of firearms exports from the State Department to the Department of Commerce. I fear that doing so would make it easier for weapons to get into the hands of organized crime and terrorist organizations around the world and would remove congressional oversight from the practice of selling weaponry. Decisions about weapons sales need to take into account issues of human rights violations, as well as problems of uncontrolled violence in countries where peaceful civilian life has broken down. These are matters for the State Department and Congress to investigate and assess, and are not mere business concerns.

Keep firearms classified as "military." There is no reason (except for the push of the NRA for sales) to move this category to the Dept. of Commerce. America needs more gun control than it has now. Innocent citizens have been gunned down on our streets; children sleeping in beds with drive-by shootings in their neighborhoods. The world does not need more of the same in their areas. We need to provide safety in our schools and neighborhoods keeping guns with the military classification. We need better firearms training of our police officers to head off needless shootings by them also.

General Comment

Please act to prevent the sale of semi-automatic and similar guns to foreign bodies. The U.S. needs to stop being an exporter of violence and these guns do just that. As the overseeing body, you have the opportunity to block the transfer of the oversight of selling arms to the U.S. Commerce Department. As you know, the Commerce Department applies the lens of business development. This approach will work to boost the sales of guns and not regulate them, ultimately putting U.S. citizens in more danger. Creating an environment where people around the world can gain access to these weapons puts more people at risk, including Americans. We're seeing this across the United States with mass shootings happening every day -- so prevalent that they're not making national news anymore. Making more money at the expense of peoples lives and our national security is wrong. Let the State Department continue to do their job of limiting access to these dangerous weapons.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Moving the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This will make the world and the United States less safe.

General Comment

Right now, firearms exports are classified as military, and it is in the best interest of our country's security that it stay that way! This is why firearms are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place in the following ways:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you kindly for leaving the current rule in place!

I think transferring oversight of foreign arms sales to the Department of Commerce is a bad idea, because it would probably make it easier for people in other countries to get dangerous weapons and lead to a more violent world. I hope supervision of such sales would remain with the Department of State.

I oppose a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. At this time firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Deadly firearms should not be sold to whoever can pay for them. Our country's priority needs to be human safety, not profitability for firearms manufacturers.

Please keep the State Department regulating weapons/arms/guns.

The State Department must keep the "Blue Lantern" program, in place since 1940, which carries out hundreds of pre-license

and post-shipment inspections and publicly reports on these weapons.

It should NOT remove licensing requirements for brokers, which could increase the risk of trafficking.

It should NOT remove the State Departments BLOCK on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department

successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with

access to a 3D printer, anywhere, to produce a lethal weapon. Changing this rule switch OUT of the State Department's

hands would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe which would

be a VERY frightening prospect.

You must make it HARDER to sell/produce weapons/arms/guns, because America and other countries need LESS

weapons/arms/guns, NOT more! Keep the State Department IN CHARGE OF these DANGEROUS weapons/arms/guns,

and do NOT let the Commerce Department regulate weapons/arms/guns, something it does NOT have the staff/knowledge/

training or manpower to enforce! Let the State Department do its job and HIGHLY regulate ALL weapons/arms/guns NOW!

I want to urge the State Department to maintain control of U.S. munitions. The State Department has the manpower, checks and balances that make sure the U.S does not supply arms to countries where human rights issues are not respected.

It is essential that our country do all we can to promote safety and security here and around the world. There is potential for

The Commerce Dept. in promoting business to increase arms sales to unruly nations and proliferation of guns is not an avenue to peace.

PLEASE keep control of U.S. munitions in The State Department.
Keep up the good work!

It is very important that the State Department continue to handle export licenses for semi automatic assault weapons and other weapons of war to protect our national security. It must not be made easier for criminals and terrorists to obtain American guns and ammo.

Allowing the Department of Commerce to handle these licenses is a dangerous idea driven by the NRA's desire to increase their profits. The NRA cares nothing for the safety or security of our country. We must.

General Comment

I am writing to you today to express my strong opposition to the proposed rule to transfer oversight of small arms exports from the State Department to the Commerce Department. The Commerce Department prioritizes doing business over safeguarding national security which would make this change far more dangerous for Americans.

We know the US gun industry is faring poorly in today's domestic market, which is why the NRA and the National Shooting Sports Foundation has been lobbying hard to remove congressional oversight of commercial weapon sales of \$1 million or more. No one else asked for it or wanted it.

The NSSF, a gun industry trade group, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobby's influence in the rule's description of semiautomatic assault rifles like the AR-15 as "civilian" products. These weapons were not designed for household use, the were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters.

If you go forwar with this disastrous policy, I will do everything in my power-peacefully and democratically- to hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and drain the swamp.

I strongly oppose a rule change switching the regulation of firearms exports from the U.S. Department of State to the U.S. Department of Commerce. This would adversely affect our national security and destabilize countries around the globe. It would enrich the U.S. gun manufacturing industry at the expense of public safety. There is good reason to leave the regulation of firearms exports at State and maintaining the classification of firearms exports as "military." Congress should be able to block sales of firearms to foreign countries; particularly those with serious human rights violations. With this rule change, Congress would no longer be automatically informed of sizable sales that it could stop in the name of national security.

General Comment

I oppose the proposed rule change to switch regulation of firearms exports from the US State Dept to US Commerce Dept. Such a change would facilitate arms exports to oppressive regimes, open the doors to organized crime and terrorist organizations, and further fuel the violence that is causing mass migrations. It will enable 3-D printing of lethal weapons with impunity. We need more controls on firearms not less.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department

Firearms exports are classified as military" and they are under the regulation of the State Department, and it's why Congress can block sales of large batches of firearms to foreign countries.[1] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[2]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[3]

Here are more details on how the rule change would make the world a far more dangerous place:

- * It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[4]

- * It would remove licensing requirements for brokers, increasing the risk of trafficking.[5]

- * It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the

globe.[6]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I oppose additional expansion of anything leading to sale of guns in this country. They are readily available but the NRA wants to promote a variety of tactics designed to make them even more available. Legitimate purposes such as REGULATED hunting have a long history. However, the expansion of gun availability and variety is unconscionable. Additional REGULATION is highly preferable to additional deregulation. Armor piercing bullets, loopholes for background checks, selling of guns with no legitimate, hunting (Other than hunting for humans) purposes are reasonable restrictions. When the NRA proposes something, it is certain to be focused on additional accessibility to guns in private and public places. Please do not support this change.

I am vehemently opposed to the proposed transfer of authority for regulating firearms exports from the State Department to the Commerce Department. The sale of weapons has national security and human rights implications that Commerce CANNOT manage, and Congress MUST be informed of and have the ability to block such sales, as they do in the current structure.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

Please do not change the regulatory restrictions on how firearms may be exported from the United States. During these days of too many mass shootings and times when angry people too often turn to guns first, thoughts next, we cannot add to this ease. When many in our government are working to tighten our borders concerning who or what is coming in, why would we loosen our borders concerning what is going out? Please do not allow big business to over rule our moral obligations and to change our regulatory systems.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I volunteer regularly working with refugees. I am aware of how many countries have human rights violations. I am concerned that if we send these firearms to other countries, they may be used against innocent civilians. These are military-style weapons, and their sale should be regulated by the State Department.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

I strongly urge you not to implement this new rule.

General Comment

I am a parent and active member in the early childhood education community in Chicago. I am opposed to amending the International Traffic in Arms Regulations (ITAR) to revise Categories I (firearms, close assault weapons and combat shotguns), II (guns and armament) and III (ammunition and ordnance) of the U.S. Munitions List (USML) to describe more precisely the articles warranting export and temporary import control on the USML. Items removed from the USML would become subject to the Export Administration Regulations (EAR).

The firearms industry is hurting financially - revising these rules to benefit the fire arms industry's bottom line is NOT in the best interest of Americans or any global citizens.

We do not need more guns in the hands of those that wish to cause us harm. These high powered weapons belong in the hands of our military and not civilians.

Also, the amendments proposed would limit Congressional oversight on important gun export deals and drastically increases the possibility for gun trafficking. This is unacceptable.

I respectfully ask that the Department of State does not amend the International Traffic in Arms Regulations (ITAR).

Regards,

Aisha Noble

General Comment

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose the proposed rule change that would take firearm sales away from the state department and move it to the commerce department. We should not encourage the exportation of firearms. Most countries have fewer firearms deaths than the United States. We should not encourage firearms deaths in foreign countries.

General Comment

I strongly oppose the rule change which would move the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Congress no longer being automatically informed about sizable weapons sales so that it could monitor or stop them in the name of national security, (especially in the case of sales to countries where there are serious human rights concerns, such as the Philippines and Turkey), is unconscionable, short-sighted, and greedy, at the expense of the security for future generations.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I oppose this Proposed Rule, and any rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The handling of export licenses of semiautomatic assault weapons and other powerful firearms must remain with the U.S. State Department, which is charged with safeguarding our nation, not the U.S. Commerce Department, which promotes American business. The transfer of authority as proposed would open new floodgates for arms sales internationally, with serious implications for our national security. Because firearms are weapons for killing, firearms exports are rightly classified as military, and fall under the regulation of the State Department, where Congress can block sales of large batches of firearms to foreign countries. Under this proposed rule change, Congress would no longer automatically be informed about sizable weapons sales that could be prevented in the name of national security. In addition, the Commerce Department does not have the resources to adequately enforce export controls, nor does its Bureau of Industry and Security have staff everywhere. Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would find it easier to obtain large caches of American guns and ammunition. Do not jeopardize our national security with this change.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This rule change will make the U.S. and the World a MUCH more dangerous place.

As a new mother, I do not want my child growing up in fear. I currently have faith in the State Departments Blue Lantern program that carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. This new rule will remove those licensing requirements for brokers, increasing the risk of trafficking.

It is also frightening that it will remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please DO NOT change this rule. The current rules keep us safe in this already very dangerous world of guns and firearms.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I strongly protest against switching the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department does not have the resources to effectively enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face fewer hurdles to getting large quantities of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Changing oversight and regulation of firearms would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D-printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D-print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This is a dangerous, ill-considered, profit-driven move that produces revenues for the NRA and increases the likelihood of injuries and deaths.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Here is how the rule change would make the world and the USA a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose the rule change

I oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department which is focused on safeguarding our nation to the U.S. Commerce Department which is focused on promoting American business. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Detailed concerns are that the rule change would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them; would remove licensing requirements for brokers, increasing the risk of trafficking; and would remove the State Department's block on the 3D printing of firearms. Promoting American business at the risk of further destabilizing the world is a bad deal.

General Comment

Right now, firearms exports are classified as military, putting them under the regulation of the State Department and allowing Congress to block large sales of firearms to foreign countries. Under the Department of State's (DOS's) proposed rule change, the handling of export licenses of semiautomatic assault weapons and other powerful firearms would shift from the DOS (focused on safeguarding our nation) to the Commerce Department (focused on promoting American business). This means Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey, which would open new floodgates for arms sales internationally with serious implications for our national security.

The Commerce Department simply does not have the resources to adequately enforce export controls. The Bureau of Industry and Security does not have appropriate staffing levels to monitor and regulate firearms exports on the level that they deserve, given their import to our national security. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The bottom line is that switching the regulation of firearms exports from DOS to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

I oppose the regulation of firearms by the U.S. Commerce Department for these reasons:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose the rule that would switch the regulation of firearms exports from the U.S. State Department to the U.S. Commerce Department.

Currently firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I believe that the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Our safety should never be for sale. Our State Department has information not accessible to the Commerce Department that make them the appropriate agency for this role. The Commerce Department cannot be expected to weigh the proper considerations when making these decisions. We shall be watching these proceedings closely. Please do not move these responsibilities.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The rule change to switch control of firearms from the State Department to the Commerce Department would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the world. The rule change would make the world a far more dangerous place.

Moving control of firearms to the Commerce Department would make legitimate efforts by the government and law enforcement agencies of every country vastly more difficult and dangerous... and that includes America.

We strongly oppose this rule change.

General Comment

It is unconscionable and immoral to consider moving international arms sales from the State Department to the Commerce Department. America has one of the best reputations, internationally, for being a good global citizen, defending human rights and peace in the world. Moving regulation of international arms sales from the State Department to the Commerce Department is based only on the immoral considerations of greed and promoting violence. Please reject any changes to International Traffic in Arms Regulations.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense

Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose strongly this rule change, which would (I believe most intentionally!) weaken US regulation of firearm exports. Weapons of war are far from just an issue to be monitored weakly by a Commerce Department uninformed of what international impacts arms sale overseas will have. Is the world no longer dangerous...just a fertile sales ground for the arms industry? Do we want the NRA setting policy for where we ship arms? Do we want a department without strong arms enforcement capabilities to be the only agency watching for arms traffickers? Leave arms classified as such--"military"--so that the State Department and Congress will retain oversight!!

General Comment

I strongly oppose the proposed rule to move regulation and oversight of firearms (small arms) exports from the State Department to the Commerce Department. An agency that prioritizes doing business over safeguarding national security has no business controlling the sale of small arms. In addition, it's truly crazy to eliminate congressional oversight of commercial weapons sales of \$1 million or less. The obvious intent here is to increase sales for the faltering U.S. gun industry, at the expense of our national security. This is completely unacceptable. If this dangerous policy is implemented, U.S. national security is in jeopardy, as well as the safety of people around the world. Please think through the long-term implications of this change, none of which are good.

Thank you for your time and attention.

The NRA is a corporate organization focused on one thing only: How much profit they can make from the sale of weapons. As it happens, I spent part of my career working in the ordnance world at DoD. I also live on the southern border.

The notion that ANY foreign military sales should be released to the Dept of Commerce is ludicrous. Much of the gun violence we deal with is a direct result of US weapons going over the border, to arm the drug cartels, who then create the violence in our cities associated with the drug trade. No sane person would want to increase that.

Weapons sales of any sort need to be housed in the State Dept. To do otherwise is self-defeating.

To Whom it May Concern at the DOS:

I'm deeply concerned about the Proposed Rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department.

While the current administration has made it abundantly clear that US exports, and supporting large business is a TOP priority, the same administration is also name national security as a TOP priority, making major changes to immigration and imports/tariffs under that guise. I fail to see how reducing regulations on exporting firearms DOESN'T affect national security.

The State Department's focus is safeguarding our nation
The Commerce Department's focus is on promoting American business

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security: facilitate firearms exports to oppressive regimes, remove safeguards that help keep organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. How are any of those things in the best interest of our country? And doesn't nation security always come first? For example, the Defense Department has the largest slice of the US budget! And the president has tremendous powers to act in the name of national security (e.g., current travel ban), that are not available to promote business for a reason. So again, I fail to see how this proposed rule protects the national interests of this country. PLEASE STOP caving to NRA special interests, and continue to safeguard our nation.

With respect,
D

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. We need safe guards in place to ensure that large quantities of weapons are not being shipped to countries with dangerous regimes. Congress must continue to be notified when large quantities of weapons are sold and shipped and where they are going. The Commerce Department lacks the controls necessary to ensure that the United States remains a conscientious global citizen.

I strongly oppose switching the regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It would remove the State Department ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally.

It would remove licensing requirements for brokers.

Would stop the program that inspects pre-license guns and issues reports.

Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and fuel increased organized crime and terrorism.

There is NO need switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move.

This rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, INcreasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

PLEASE don't let this happen

I am against the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers organized crime, terrorist organizations and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Is the Trump Administration ready to support terrorist and organized crime in this manner? Is Trump ready to see more people die to serve his NRA masters? The world needs less guns not more and much, much stricter regulations and safety laws.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Exporting military grade weapons without congressional or diplomatic review opens the door to allowing US companies to provide arms to authoritarian governments, terrorists and other unethical entities. The sale of semi-automatic weapons of war is not simply a business decision, it is 100% an ethical and diplomatic decision that requires oversight from US government - and not just the commerce department, which does not have the expertise or resources to adequately evaluate these sales. The United States absolutely should not be selling weapons of war without substantial oversight from elected officials and staff with the expertise to evaluate the human rights and diplomatic implications of these sales.

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3] Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The NRA is pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security and those of other nations.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. This is why it is so dangerous.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. THERE IS NO JUSTIFICATION OR REASON FOR THIS CHANGE.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. THIS NEW TECHNOLOGY ALONE MAKES THIS CHANGE EXTREMELY DANGEROUS.

PLEASE DO NOT ALLOW THIS PROPOSED CHANGE. IT IS DANGEROUS FOR THE US - AND THE WORLD. Thank you.

General Comment

I oppose switching the regulation of firearms exports from the U. S. Department of State to the U. S. Department of Commerce.

There are many good reasons why firearms exports are classified as military and are closely regulated under the Department of State, with Congress given notifications of sizable weapons sales to foreign countries and the ability to block these sales for national security.

The Department of State provides needed gun export oversight, which the Department of Commerce does not have the resources to do. Enforcing the current regulations prevents firearms traffickers, terrorist groups, organized crime, and oppressive regimes from obtaining large caches of American guns and ammunition.

However, if gun export licensing is moved to the Department of Commerce, Congress would not be informed automatically of notable arms sales, and safeguards would be removed so that dangerous agents could more easily obtain semiautomatic assault weapons and other powerful firearms, and this opens the floodgates for destabilizing violence around the world.

The handling of export licenses of assault weapons is properly under the Department of State, which is focused on safeguarding our nation. The Department of Commerce, with its focus on promoting American business, is not the suitable agency for regulating arms exports.

I read somewhere Those who live by the sword, die by the sword. Exporting weapons around the world is not an ordinary business like exporting food or solar technology. For the sake of children everywhere, lets do all we can to prevent violence and the suffering it causes.

I can't even believe you are considering something as bone headed as switching the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The goals of those two departments are completely opposite - from one that would restrict weapons sales in the interest of national security, to one that would promote it to benefit U.S. businesses. To be perfectly clear, I oppose this rule change that would make our country and the world drastically less safe.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

So it now appears that national security takes a back seat to profit. Please keep the regulation of exported gun sales where it belongs...in the State Department, or face the possibility of another 9/11 type attack.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. There is no good reason to make it easier for manufacturers to export firearms to other countries, to remove licensing requirements for brokers or to remove the block on the 3D printing of firearms. This is a dangerous rule change and it should be rejected.

Hello,

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department! It is bad enough this country leads the way in allowing "poison for profit" in so many of our consumer goods. All in the name of capitalism, greed, ignorance, arrogance. Now we want to add firearms world wide?! This is pure insanity! Just look at how sick the domestic terrorist murders are in the states today. This will open the door for ALL countries to "enjoy" the murders while the "good, rich, white, conservative christians" roll in more profits! Pro-life? I think not! Pro CULT is all they really are! Studying the ORIGINS of their cult PROVES they are the ones we need to STOP! NOW! So, PLEASE! Do NOT allow these regulation changes!!

Regards,
Bill

General Comment

I STRONGLY oppose this rule change that would shift the the handling and regulation of firearms export from the U.S. State Department to the U.S. Commerce Department. This is entirely inappropriate and unsafe. This responsibility needs to remain with the U.S. State Department, because its focus is national security. The U.S. Commerce Department is completely inappropriate because its focus is on promoting American businesses, and in this case, it would be weapons sales. Its focus would be money and not national security. This is dangerous.

Further, it is my understanding that firearms exports are all classified as military. This is critical because, under the authority of the State Department, Congress is now able to block sales of large batches of firearms to foreign countries. If the authority is shifted to the U.S. Commerce Dept, Congress would be utterly uninformed about sizable weapons sales that it could (and should) stop in the name of national security. Congress would similarly be uninformed about weapons sales to countries where there are serious human rights concerns, as in the case of he Philippines and Turkey.

Again, this change would be a HUGE MISTAKE, and one that I adamantly OPPOSE. It is NOT in The United States best interest. It would be in the NRA's best interest. That is wrong.

I am writing to oppose the move of weapons sales and licensing from the State Department to the Department of Commerce.

Here are several reasons:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

In addition, the commerce department does not have adequate resources to enforce export controls.

This transfer is bad for the U.S. and is bad for the world.

Thank you,

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

And please remember that the majority of military-grade weapons used by the Mexican drug cartels are obtained from the US!

I strongly OPPOSE changing regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It could result in more weapons on the street - certainly we have enough illicit use guns. I believe it would result in increased weapons at home and abroad and restrict The State Department's oversight of many current activities. more weapons domestically and internationally.

It would remove licensing requirements for brokers.

It stops the program that inspects pre-license guns and issues reports.

We do not see the need switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move

General Comment

Switching regulation of firearms exports from the State Department to the Commerce Department is a dangerous, short-sighted idea. It will facilitate exports of weapons to oppressive regimes, and remove the safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and it will further fuel violence that destabilizes countries and leads to mass migrations of refugees.

If you switch regulation of firearms exports to the Commerce Dept., it will eliminate the State Department's Blue Lantern program, in place since 1940. Blue Lantern carries out hundreds of pre-license and post-shipment inspections and publicly reports on the results of their inspections.

This change will also remove licensing requirements for brokers, which will instantly encourage trafficking. Worst of all, the change to the less well-staffed and more porous Dept. of Commerce will remove the State Department's current block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Dept. successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer--anywhere in the world--to produce lethal weapons. The rule switch you are proposing will remove this block, and enable 3D printing of firearms in our home-grown terrorist organizations--as well as all over the world.

This will contribute to instability and violence all over the world and lead to yet more blood on the hands of our country. Our own nation is already dangerously divided; the rule of law is derided by men who think they are above the law. Allowing the unchecked flow of assault and other large caliber weapons will lead to yet more gun violence, more mass shootings of helpless and harmless civilians and children, and at last to the kind of sectarian bloodshed such as we have seen in countries all over the world--only this time, it could happen right here, in America.

General Comment

I am registering my dismay at any efforts to increase export of munitions, especially to Mexico, Central America and to any nation that is at all politically unstable. Mexico is the country that I know most about because I volunteer with Greater Boston Trade Justice, a group of citizens in eastern MA working to improve NAFTA. However the dynamics in all these countries are similar.

Access to weapons is critical to the survival of drug cartels, so they love America's current lax gun laws. 70% of guns recovered in crimes in Mexico can be traced to the USA. High caliber rifles are preferred.

At present guns and cash are transported illegally overland along the same routes that drugs are transported north. How much easier would it be if the money obtained from drug sales were to be spent on guns legally imported into their own country? Given the cartels' level of infiltration into local and even federal government, laws regulating legal sales are very weak.

Violence related to drug trafficking is currently a huge cause of fear for life in Mexico and Central America. Thus the problem of aliens illegally crossing the border into USA is exacerbated.

Given these facts, how does increasing firearms exports even make sense if you at the same time want to decrease illegal immigration?

In addition, how is this deregulation different than the Fast and Furious program, in which Border Patrol Agent Brian Terry was killed in December 2010? That program was rightly criticized, especially by politicians on the right side of the aisle. But that program at least tried to actually fight criminal activity. Deregulating gun exports would only increase it.

Please reconsider this deregulation.

Sincerely,

Elisabeth King

General Comment

Automatic and Semi-Automatic Weapons whether currently available in the U.S. from commercial dealers are primarily weapons of war designed to kill people with maximum efficiency. Reclassifying these exports as non-military and subjecting them to less scrutiny when sold outside the U.S. is dangerous both to human life and the U.S. foreign policy interests. Imagine the outrage that will be levied at the U.S. by allies and/or others if such weapons become as easily and inexpensively available abroad as they are presently in the U.S. where they have been shown to encourage gun violence and even mass murder in schools, shopping centers, concert venues, etc. Continuing to apply more scrutiny and higher export registration fees will discourage U.S. manufacturers of such weapons from offering them commercially abroad.

General Comment

Firearms exports must continue to be classified as military so that they are under the regulation of the State Department, and so that Congress can block sales of large batches of firearms to foreign countries. If firearms are not classified as "military", Congress would no longer be automatically informed about sizable weapons sales and could not stop them in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This would be dangerous to the US and to the world.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to

The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

General Comment

Dear Sir or Madam:

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

As you likely know, this rule change would, among other things:

(a) eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

(b) remove licensing requirements for brokers, increasing the risk of trafficking.

(c) remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not move forward with this rule change.

Sincerely,

Mark and Candace Anderson

General Comment

I oppose the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Currently, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! As a public health nurse and a citizen concerned about human rights and global health, I strongly oppose the proposed rule change.

General Comment

Why would we change how guns are handled by our government? We need to keep the U.S. State Department in charge of the selling and exporting of dangerous things like guns and weapons because it is the job of the U.S. State Department to safeguard our country! Changing the department that safeguards our country to the U.S. Commerce Department would be outrageous and unsafe!

Firearms are dangerous!! They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They are used to kill U. S. citizens daily. We need MORE controls on how these weapons are acquired!

They should be subject to far more controls, not less!

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Do not change how guns and weapons are classified! They are classified as "military" because that is how we keep our country safe! This is why they are under the regulation of the State Department!!

Please keep us safe. Don't let big business control how many of our enemies have weapons because they don't care about our lives!!

Please do not enact this rule. Anything that increases traffic in arms should be examined carefully. There isn't enough justification for this if you remove the profit motive. We don't need the industry taking over. The profit motive should not outweigh international concerns, and control should remain with the State Department.

The State Department must continue to regulate the export of firearms. The role of the State Department is to interact with other countries in a way that protect American interests and the interests of other nations. As possible agents of death, firearms can compromise both American and foreign security. The State Department has a compelling interest in preventing, or at the very least overseeing, the sale of firearms. Please do not relinquish this authority.

To the U.S. State Department,

I am writing to express my opposition to any rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I believe such a rule change would be extremely unwise because the State Department has the facilities needed to prevent guns from falling into the hands of organized criminals, political extremists, terrorists and human rights violators around the world. The Commerce Department is much less well equipped to do this.

Sincerely,
Darien Gardner

Hi!

Oppose giving this authority to Commerce.

We need less guns here in US and around the world.

Guns are for murdering humans.

I oppose transferring arms regulation to the Dept. of Commerce. This would open the door to even more arms trafficking than we already have. I find it stupefying that POTUS Trump, who spends most of his time complaining about arms trafficking across the border, would support such a move. It must be stopped!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This change in the administration of gun sales will create a fundamentally more violent and unsafe world both inside and outside of the U.S.

This change would:

1. eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them
2. remove licensing requirements for brokers, increasing the risk of trafficking
3. remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

For these reasons I strongly oppose this regulatory change in arms sales.

General Comment

As a very concerned U.S. citizen and taxpayer I appreciate your carefully considering my comments!

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

More reasons that the proposed rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please cancel this proposed rule change!

I strongly oppose the proposed rule to allow international traffic in arms regulations from the State Dept to Dept. of Commerce.

Really, are guns just a commodity now? It would remove the State Departments ability to restrict 3D printing. Is this the best way to govern? Appauling.

It would also remove licensing requirement for brokers and stop the program that inspects prelicenses.

We CANNOT let this happen in our country and our place in the world. Seems like we've given up being civil!.

I understand there are regulations being explored to move the regulations of the sale of guns from the State Department to the Commerce Department.

I do NOT support this move. The State Department is doing a good job and understands the myriad geopolitical issues with selling weapons to different countries. This context should remain when looking at the sale of weapons. We have seen too much instability in the world from our sale of weapons to varying governments, rebel groups and others. We must look at the bigger picture of weapons sales and not just look at profit.

Please do NOT move this oversight capacity from the State Department to the Commerce Department.

Thank you.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. This cannot be allowed to happen! The NRA may be the most dangerous, destructive, immoral and criminal "terrorist" organization in the world today, and I do not use the word terrorist lightly. We MUST retain control and knowledge of all gun sales and we cannot create new systems that would give the NRA and gun manufacturers free rein.

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose changing rules that would increase International sale of arms. Keep the State Departments Blue Lantern Program. Keep the State Departments blocking of 3D printing of weapons. Why are we trying to arm the world. This is foolish!!!

The sale of fire arms and weapons should stay under the State Department to ensure that weapons do not get into the hands of terrorist or enemies of this country. The State Department has been doing a good job of monitoring the sales so they can be stopped before it is to late. The Commerce Department does not have the personnel or experience to monitor the sales of weapons. This change will seriously jeopardize our national security . I ask that there be no rule change regarding the sales of weapons.

The argument of cost savings is false and deceptive. This move to the Dept of Commerce would cause many small conflicts throughout the world to be exacerbated as conflicts would likely worsen, with potential detriment to our national security. This move also affects our immigration policy as many of the immigrants to the US are seeking asylum from severe conflicts and violence in their home countries. The only entities to benefit from this are gun manufacturers. This change needs to be halted now for humanitarian and national security reasons.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

A rule change to move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department is a dangerous idea to all Americans, since it has serious implications for our national security.

Currently, firearms exports are classified as military, so the State Department can regulate their sale and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The current administration talks endlessly about national security, but if this rule change goes through, we will all see that their real top priority is allowing the gun manufacturers to make more money and they really don't care about Americans security at all.

General Comment

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Right now, firearms exports are under the regulation of the State Department and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This is crazy and dangerous. Do NOT make this rule change and endanger our country further.

General Comment

I oppose the proposed rule because the regulation of weapons, and especially assault style weapons, should be with the State Department, not the Commerce Department. If the intention of this regulation is to prevent trafficking, then this responsibility should rest with the State Department, as the Commerce Department does not have the resources to properly enforce this. The Commerce Department's aim is to increase trade, and while that is fine if we are talking about strawberries or salt, this is a dangerous precedent to set for a product that is lethal - gun exports and manufacturing should require extra scrutiny and regulation, and I strongly oppose this rule change.

General Comment

I am an an ordained Deacon in the Episcopal Church and I am very concerned about this rule change. I was in Newtown Connecticut at the time of the Sandy Hook tragedy. I am very concerned that this proposed change will impact the lives of so many living under gun violence. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for

brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

Please continue to handle export licensing of semiautomatic assault weapons and other powerful firearms within the U.S. State Department (focused on safeguarding our nation). Do NOT move it to the purview of the U.S. Commerce Department because this transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

If the U.S. Commerce Department is given this responsibility, it would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you.

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

I am deeply concerned with the proposed plan to switch regulation of firearms exports from the State Department to the Commerce Department. Anything that can make it easier to sell more guns overseas compromises United States security. Please take whatever steps are necessary to tightly regulate overseas firearms sales in order to keep people in America, and around the world, safer.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Opposed to shifting regulation of firearms export to U.S. Commerce Department.

Would stop Congress being automatically informed of weapons sales it could stop in the name of national security, especially to countries with serious human rights abuses, such as the Philippines and Turkey.

Commerce Department lacks resources to enforce export controls: Bureau of Industry and Security does not have staff everywhere. Hence, firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

It would eliminate:

- ..the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- ..licensing requirements for brokers, increasing the risk of trafficking.
- ..State Departments block on 3D printing of firearms.

I am a gun owner and former hunter and strongly OPPOSE switching the regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It would remove the State Department ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally.

It would remove licensing requirements for brokers.

Would stop the program that inspects pre-license guns and issues reports.

Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and fuel increased organized crime and terrorism.

There is NO need to switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This is a dangerous and irresponsible action that must be stopped. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They have been pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department, which its primary focus is on promoting American business. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Firearms exports are classified as military under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With having firearms sales regulated by the U.S. Commerce Department, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

The reality is - this is not only dangerous for other countries, but our country as well. This is truly an insane proposition that would turn ugly and deadly fast. The NRA has already proven that they don't care about anyone's life and that they will go to great lengths to get what they want. This must be stopped because they don't care how many people will die in other countries or this one as long as they make their billions. They just don't care.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Arms are not just another US export to promote and arms sales should be subject to review for non-commercial implications such as use in human rights violations. These are foreign policy issues and should be treated accordingly.

For Gods sake, do NOT allow the switching of the regulation of firearms exports from the State Department to the Commerce Department!

Without question, it would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel the violence that destabilizes countries and causes mass migration.

Although Putin would like the way it would further undermine the reputation of standing for world peace that the USA has nurtured since its foundation, even he wouldnt approve of this if it meant his citizens could buy the guns.

Please, please do not let the NRA get away with this dangerous, greedy, thoughtless move. Keep gun control and the control of export licenses of semiautomatic assault weapons and other powerful firearms within the State Department!!

Our national security and, to a large extent, that of the world, depends upon it!

I would ordinarily leave my contact info but I'm afraid of NRA repercussions.

Dear sir

I am writing to oppose the proposed changes to the regulation of domestic Firearm sales to foreign purchasers.

The United States has supplied weapons to foreign groups in the past only to have those same weapons used against

our own military personnel. Mistakes were made in the past but I would rather arms sales were regulated by the

State Department whose aim is to protect the safety of our nation. The Commerce Department has a goal of increasing

our sales and isn't tasked with determining whether those sales constitute a future danger to our country.

Therefore, I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

General Comment

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

Please put people over profits.

Thank you.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Please do

not eliminate the State Department Blue Lantern Program in force since 1940.

which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

I usually try to avoid using comments that are written for masses because I worry they won't be taken seriously. I am disappointed that just about anybody in the United States can legally buy a gun that can kill multiple civilians or LEO in a matter of minutes. The idea that a rule is being considered to spread this irresponsible behavior to other countries over which we have no control and no ability to change laws is appalling. I am attaching a letter that I think should be taken very seriously because I agree with it and want to keep the world safer even as our own country goes up in flames: I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. As an American citizen, I find it appalling that the government would consider moving this rule to the DOC. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. [2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3] This is highly concerning as we have already seen our current President has no consideration for human rights concerns and will happily give stuff to anyone if they pay the right amount of money.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Some other details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7] The answer is not more guns when we already have significant issues with gun violence in this country.

The proposed ITAR revision for firearms and ammunition promises little, and risks much. As an analyst of the global arms trade and weapons proliferation for thirty years, I recognize the transformative power of regulatory reform. But this is something else. The proposed revisions promise short-term benefits, which seem unlikely to amount to much in an already competitive global market. That makes this deregulation for the sake of deregulation itself. Meanwhile, the change unleashes three forces certain to accelerate long term American industrial decline and loss of influence over global consequences.

First, they show that the United States no longer will set global normative standards for all form of arms transfers and non-proliferation. Previously the United States Government has shown it will not further tighten restrictions. As the first outright relaxation of oversight standards in arms exports in over fifty years, the change marks a switch in policy dating from the Kennedy Administration.

Second, as the dominant player in global small arms trade, the United States has the most to lose from further loosening. As other countries emulate Americas relaxation of restrictions, not only will there be more firearms reaching more hotspots, but we can be certain the United States will see its share of a more competitive market decline. Other manufacturing countries, with lower wages and more aggressive export subsidies, are more likely to reap the seeds sown here.

Third, the change marks a fundamental shift in the nature of arms export oversight. By reducing the role of the US Government, it leaves regulation exclusively to the recipient government. This shifts the burden of proof in international human rights and state oppression, from outside powers with no direct interest in the outcome, to the recipient governments, governments that are often guilty of using imported weapons in appalling or frightful ways, ways that would be completely illegal in the United States.

I wonder when we're going to wake up and realize we're all connected...that we all come from Source. When are we going to stop killing each other? Is money really the only thing on Earth we care about? Is living in fear the only way we know? Now, we have to export all of that as well? What possible justification could there be for shipping out more guns other than greed? One day, our future ancestors will look back on us and think we were utterly barbaric. So very sad that we don't have the courage to have a better legacy than this.

I'm opposed to the rule change that would switch the regulations of firearms exports from the State Dept to the Commerce Dept for the following reasons:

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

There is no reason to change the rule to permit free sales of arms to foreign countries except to further enrich gun sellers. In the current system there is sufficient oversight; the Commerce Department doesn't have the means or the natural purpose to monitor and restrict sales to prevent sales to enemies of the U.S. and allies, including terrorists.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security. The Commerce Department does not have the resources to adequately enforce export controls, therefore, firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Please deny the rule change (that the NRA is pushing) that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

I am opposed to this rule change! Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Seriously? The very idea of loosening any export provision on guns is absurd. This country already has a problem of too many guns, resulting in too many deaths. Do not weaken any export rules or laws. It will harm everyone involved.

General Comment

This proposed rule is one of the most wrongheaded and misguided to emerge from the Department under the present administration.

The sale of arms abroad is far more than a business concern. Munitions exports are a matter that profoundly affects the national security of the United States and its relationships with other powers. Those concerns can and should often outweigh the commercial interests of arms manufacturers, and therefore clearly fall within the purview of the Department of State. Our international relations and relationships should not be dictated by gun manufacturers and the NRA, which would be precisely the result of the enactment of the rule.

This proposed rule is a mistake and the Department should immediately abandon it.

As a 25-year veteran of the U.S. Commercial Service, charged with promoting the export of U.S. products & services, I strongly PROTEST against this change in the approval of the export of U.S. munitions.
from

It is absolutely critical the the U.S. Department of State retain this authority, in order to balance the financial gain from export sales against our other important foreign policy concerns, such as a country's treatment of its own citizens, its commitment to human rights, rule of law, and basic, fundamental democratic principles.

Any short-term gain in export sales is not worth the wholesale abrogation of the very principles which America -- the shining city on the hill and the world's beacon of democracy -- represents to the world and for which Americans have died.

RE: Comments on Proposed Rule – International Traffic in Arms Regulations: U.S.
Munitions List Categories I, II, and III, 83 FR 24198 (May 24, 2018).

Dear Mr. Monjay:

The National Shooting Sports Foundation (NSSF) respectfully submits the following comments to the above-referenced Federal Register Notice. NSSF is the trade association for America's firearm and ammunition industry.¹ Formed in 1961, NSSF membership includes more than 12,000 manufacturers, distributors, firearms retailers, shooting ranges, sportsmen's organizations, and publishers. We seek to promote, protect, and preserve hunting and the shooting sports, and we offer the following public comments.

Summary of High-Level Comments

The policy justifications for the proposed rule and the corresponding proposed rule by the Commerce Department are described well on Commerce and State Department web pages at: <https://www.bis.doc.gov/index.php/forms-documents/federal-register-notice-1/2220-cats-i-iii-myths-v-facts-posted-5-24-18/file> and <https://www.state.gov/t/pm/rls/fs/2018/282485.htm>

¹ For additional information on NSSF, please see www.nssf.org.

We encourage all those reviewing the proposed rules and the public comments to read these fact sheets to learn what the proposed regulatory rationalizations of U.S. controls on the export of commercial firearms and related ammunition are and, as importantly, are not. So that the policy objectives behind the proposed changes, as well as the “myths” associated with them, are knowable to all those reviewing the proposed rules, we ask the State Department to republish their essential content in the preamble to its final rule. In this way, they will be part of the official record and help inform comments on final agency decisions made regarding the proposed rules.

As better described by these fact sheets and in the preambles to the proposed rules, commercial firearms and related items that are widely available in retail outlets that are now subject to the export control licensing jurisdiction of the State Department under the International Traffic in Arms Regulations (ITAR) on its U.S. Munitions List (USML) Categories I, II, and III would be transferred to the licensing jurisdiction of the Commerce Department’s Export Administration Regulations (EAR) in a series of new and coherently organized Export Control Classification Numbers (ECCNs). These proposed rules are the logical continuation of an effort began in 2010 under the Obama Administration to modernize the administration of U.S. export control regulations “to create a simpler, more robust system that eases industry compliance, improves enforceability, and better protect America’s most sensitive technologies.” We agree with the objectives of these bipartisan and widely supported changes. The proposed changes merely align the regulations with the nature of the items at issue, thus more efficiently accomplishing the national security and foreign policy objectives of the controls. Such changes reduce unnecessary burdens for both the U.S. Government and U.S. industry.

We have reviewed the proposed rule thoroughly with our membership. Except with respect to several of our comments set forth below, most members have told us that the final versions of the rules would eventually be beneficial because they would significantly reduce the overall burden and cost of complying with controls on the export of commercial firearms and ammunition. All who responded told us that there would be an initial short-term increase in burden and cost because of the need to re-classify thousands of commodity, software, and technology line items and SKUs affected by the new rules, but that the long-term regulatory burden reduction would significantly outweigh the short-term need to adjust internal compliance programs and practices. There would also be significant short-term costs and burdens associated with the need to become familiar with the nuances of the EAR and new BIS licensing officers. However, this burden, we believe, would be largely addressed by BIS’s long-standing commitment of industry outreach and training resources, which we appreciate. We also believe that DDTC staff will continue their robust outreach and training efforts as well.

Our members understand that there would be no change to the licensing policies for end item firearms and related ammunition. If a gun required a license to export when it was regulated by the State Department then it would require a license to export when it is regulated by the Commerce Department. If an export to a particular destination or end user would have been denied or approved before, it would be denied or approved in the same manner under the new rules. Applications would go through the same interagency review process, including by the Defense Department and also the State Department’s human rights and other experts. Under the new rules, no approvals would be converted to denials or denials to approvals.

Nonetheless, most of our members, particularly the small- and medium-sized companies, believe that the changes will be economically beneficial for them because the eventual regulatory simplification and cost reductions will allow them to consider exporting when they might not have otherwise. Those that already export believe they will be able to expand sales of exports that would have otherwise been approved. They hold these views because BIS and the EAR are simply better able to regulate commercial items than are DDTC and the ITAR. This is not meant to be a slur of DDTC staff, which is excellent. It is merely a reflection of the fact that the ITAR exists to regulate the export of defense articles that provide a significant military or intelligence advantage in a “one size fits all” type approach with regulatory requirements that are more relevant to the export of a fighter aircraft than something that can be purchased at a retail outlet. The EAR exists to regulate dual-use, commercial, and less sensitive military items that warrant control, but in more tailored ways to fit the specific national security and foreign policy, including human rights, issues posed by the items.

These conclusions have been proven thousands of times through the application of similar export control reforms for other sensitive commercial or less sensitive military items that have been transferred to Commerce’s jurisdiction over the course of the last eight years. For example, under the Commerce system, there are no fees to apply for licenses. There are no redundant registration requirements for domestic manufacturers. There are no fees for registration. Such fees are bearable for large companies, but often not for small- and medium-sized companies. The license application forms are vastly simpler. Controls on less sensitive and widely available and basic parts, components, and technology are more tailored and allow for less burdensome trade with close allies through license exceptions. Sales with regular customers can be combined in to fewer license applications, thus reducing overall paperwork to achieve the same policy objectives. **There are many other benefits to the proposed changes as well described in the proposed rules’ preambles, but our essential conclusion is that, particularly with the changes recommended below, they will lead to growth for U.S. companies, more jobs in the United States, and related economic benefits for the cities and states where the members reside while accomplishing the same national security and foreign policy objectives they have always had.**

Notwithstanding our overall approval of the proposed rules, we have the following comments and suggested edits that would make the rules even more efficient and consistent with the overall objectives of the effort.

Specific Comments

I. Proposed Changes to Brokering Provisions in ITAR Part 129

The proposed rule would add “a new paragraph (b)(2)(vii) to §129.2 to update the enumerated list of actions that are not considered brokering [activities]. This change is a conforming change and is needed to address the movement of items from the USML to the CCL that will be subject to the brokering controls, to ensure that the U.S. government **does not impose a double licensing requirement** on the export, reexport or retransfer of such items.” (emphasis supplied). The text of the proposed exception is: “(vii) Activities by persons to facilitate the export,

reexport, or transfer of an item subject to the EAR that has been approved pursuant to a license or license exception under the EAR or a license or other approval under this subchapter.”

The policy goal of not imposing double licensing obligations – i.e., the need to get a license from both State and from Commerce for the same essential transaction – is perfect. The rationalization benefits of the reform effort and the proposed rule would, of course, be ruined if, after the regulatory change, the parties involved in the same essential transaction would need authorizations from two agencies instead of one without the reform. Indeed, State created the entire paragraph (x) concept for each of its USML categories to avoid the need to get a license from State and a license from Commerce for exports that had EAR-controlled items for use in or with ITAR-controlled items in the same shipment.

The proposed (b)(2)(vii) exception text, however, would, in most cases, not eliminate the creation of a double licensing requirement because the scope of “brokering activities” requiring registration, fee payments, and licensing under part 129 includes many types of activities that occur *before* Commerce (or State under a paragraph (x) authority) would issue a license. Such activities include, with respect to the export, reexport, or retransfer of defense services, U.S.- and foreign-origin defense articles, (i) facilitating their manufacture, (ii) financing, (iii) or insuring. With respect to their purchase, sale, transfer, loan, or lease, pre-license brokering activities include (i) soliciting, (ii) promoting, (iii) negotiating, (iv) contracting for, (v) arranging, or (vi) otherwise assisting.

Thus, for example, one wanting to *promote* or *negotiate* the possible sale of a U.S.-origin firearm that transitioned to the EAR (but which would also be identified in USMIL category I(a)) would need to go through the process of registering as a broker with DDTC, pay a registration fee, and get approval from DDTC to do so. This would be a time-consuming and expensive process – and an effort that would become completely moot under the new (b)(2)(vii) exception if and when Commerce later issued a license to the exporter to allow the export of the firearm being promoted or subject to the negotiations.

We can infer why DDTC proposed this provision, which is to ensure that it is able to review and approve brokering activities before an application is submitted because it will not necessarily know then that the license would be approved later. We recognize that brokering activities are separate controlled events from the act of exporting, reexporting, or retransferring an article. Nonetheless, we respectfully submit that for items that would become subject to the EAR (and also identified on the relevant USMIL categories), maintaining this distinction is over-cautious, creates unnecessary regulatory redundancies, and does not advance the policy objectives of the control.

First, the vast majority of licenses for the export of commercial firearms and related items are and would likely continue to be approved without issue. With respect to those licenses that are not approved, the U.S. Government would still get the final say in the act that really matters from a policy and control point of view, which is the actual shipment of the firearm or other controlled item. Thus, the double burden the proposed approach would impose does not seem warranted because the U.S. government will be able to accomplish its ultimate policy objectives at the end of the day by approving, denying, or approving with conditions the actual movement of the

firearm or related item. This would not be the case for items that would not be subject to the EAR.

RECOMMENDATION I: Thus, to accomplish DDTC's policy objectives without creating the possibility of authorization requirements from two agencies, we suggest that the scope of the brokering obligations over items no longer described on the USML but still described on the relevant USMIL categories (i.e., I(a)-(c), II(a), and III(a)) apply only to such items that are not "subject to the EAR." In this way, DDTC would have control over brokering activities over such items in situations where the U.S. Government would not otherwise have jurisdiction over their later reexport or transfer, such as non-U.S. origin items meeting the description of items proposed to move from USML Categories I-III that would also meet the description of items currently on the USMIL's Category I-III. (Again, for all items that are "subject to the EAR," the US government will still be able to regulate the transaction.) To accomplish this relatively simple solution, a suggested edit to the proposed exception paragraph (b)(2)(vii) is:

"(vii) Activities that would or could result in the export, reexport, or transfer of an item 'subject to the EAR.'"

An even simpler approach would be:

"(vii) Activities that involve items 'subject to the EAR.'"

If there were a violation of the EAR later, such as a violation of the terms of a license, then that would be prosecuted in the ordinary course. If DDTC also wanted enforcement authority over brokering violations in connection with a later export in violation of the EAR, it could insert at note along the lines of the following:

"Note to paragraph (b)(2)(vii): This exclusion from brokering activities for items subject to the EAR does not apply if the activities were part of a conspiracy to violate of the EAR."

We are confident that DDTC and the other agencies reviewing this comment may come up with other ideas. We would be open to them so long as they would eliminate the need for parties to get both a State and a Commerce authorization for the same basic transaction. Otherwise, the new rules would largely defeat one of the primary benefits of the proposed regulatory change, which is the consolidation within the Commerce system of control over the commercial firearms and related items that no longer warrant control on the USML.

II. USML Category III Ammunition – Projectiles – Pyrotechnic and Steel Tipped

The revised Category III enumerates pyrotechnic material in several subparagraphs. Subparagraph (a)(1) controls "Ammunition that **incorporates a projectile controlled in paragraph (d)(1) or (3) of this category,**" and subparagraph (d)(1) controls "Projectiles that use **pyrotechnic tracer materials** that incorporate any material having peak radiance above 710 nm or are incendiary, explosive, steel tipped, or contain a core or solid projectile produced from one

or a combination of the following: tungsten, steel, or beryllium copper alloys.” (emphasis supplied).

The revised category is specific in that it only controls ammunition or projectiles with pyrotechnic material “having peak radiance above 710 nm”. This indicates that the control is limited to tracer compositions meant for use with night vision optics rather than controlling all tracers. We agree with this approach. Bright tracers have been used for sporting purposes for years to assist shooters in targeting and marksmanship, and therefore as a dual use item are more correctly controlled on the CCL.

However, there is confusion and possible overlap of controls with regard to subparagraph (a)(6), which controls “**Ammunition employing pyrotechnic material in the projectile base and any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm and designed to be observed primarily with night vision optical systems.**” (emphasis supplied).

The first half of this sentence does not include reference to the radiance parameter of “above 710 nm” and indicates control of **any** ammunition with pyrotechnic material in the base. Since all tracer ammunition is manufactured with “pyrotechnic material in the projectile base,” it is not necessary to designate a separate control for ammunition with pyrotechnic material in the base. And, subparagraphs (a)(1) and (d)(1) already control these articles and include the radiance parameter of “above 710 nm.”

The second half of the sentence articulates controls on “any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm and designed to be observed primarily with night vision optical systems.” Since peak radiance above 710 nm is required for tracer ammunition to be suitable for use in night vision devices, having another control separately enumerated in (a)(6) seems redundant.

RECOMMENDATION II.A.: We request DDTC to review subparagraph (a)(6) for possible deletion for the reasons stated above.

Subparagraph (a)(3) controls “Shotgun ammunition that **incorporates a projectile controlled in paragraph (d)(2)** of this category, and subparagraph (d)(2) controls “Shotgun projectiles that are flechettes, incendiary, tracer, or explosive.”

Subparagraph (d)(2) does not include any reference to the parameters included in (a)(6) and (d)(1) i.e. “pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm”. Shotgun ammunition with tracer material is being produced for sporting use by a Sporting Arms and Ammunition Manufacturers’ Institute member company.

RECOMMENDATION II.B.: We recommend that subparagraph (d)(2) be revised to delete the word “tracer” and replace it with the phrase “that use pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm” for the reasons explained above and to make subparagraph (d)(2) consistent with the parameters in subparagraph (d)(1).

Subparagraph (d)(1) also controls “Projectiles that are incendiary, explosive, steel tipped, or contain a core or solid projectile produced from one or a combination of the following: tungsten, steel, or beryllium copper alloys.” (emphasis supplied).

Steel tipped projectiles are used in armor piercing ammunition. Unlike the federal definition of “armor piercing ammunition,” the revised Category III does not exempt ammunition that the ATF has found is primarily intended to be used for “sporting purposes” per the below definition:

In 18 USC 918(a)(17)(A), the term “ammunition” means ammunition or cartridge cases, primers, bullets, or propellant powder designed for use in any firearm.

(B) The term “armor piercing ammunition” means—

(i) a projectile or projectile core which may be used in a handgun and which is constructed entirely (excluding the presence of traces of other substances) from one or a combination of tungsten alloys, steel, iron, brass, bronze, beryllium copper, or depleted uranium; or (ii) a full jacketed projectile larger than .22 caliber designed and intended for use in a handgun and whose jacket has a weight of more than 25 percent of the total weight of the projectile.

(C) The term “armor piercing ammunition” does not include shotgun shot required by Federal or State environmental or game regulations for hunting purposes, a frangible projectile designed for target shooting, a projectile which the Attorney General finds is primarily intended to be used for sporting purposes, or any other projectile or projectile core which the Attorney General finds is intended to be used for industrial purposes, including a charge used in an oil and gas well perforating device.

RECOMMENDATION II.C.: We recommend that subparagraph (d)(1) be revised to delete the term “steel tipped.” Export controls of articles enumerated in the revised Category III should be consistent with definitions in other parts of federal law. Therefore control of steel tipped projectiles which have been determined to be intended for sporting purposes correctly belongs under the EAR.

III. Recommendations for Effective Date of Final Rule and Allowance for Manufacturing Registrations

RECOMMENDATION III.A. NSSF recommends a 180-day effective date for the final rule. Throughout the Export Control Reform initiative and during transition from the USML to the CCL, the final rule for many other categories had an effective date of 180 days after publication. This gave exporters of those commodities sufficient time to reclassify their products and implement changes in their enterprise systems to become compliant with the EAR. The later effective date also allowed those companies to continue to obtain export licenses from DDTC without loss of business in the interim. The regulatory change for firearms and ammunition will impact many exporters and involve a significant number of export licenses. Most of these companies have had no exposure to the EAR and will require significant training and outreach to understand the new regulations. The extended effective date will allow these firearm and

ammunition exporters sufficient time to learn and implement EAR-centric processes and procedures while still continuing to do business.

RECOMMENDATION III.B. Although the extended period will be beneficial to exporters, it may present issues for small manufacturers and gunsmiths that do not export but are nonetheless required to register with DDTC. Some of these companies may have registration expiration dates within the period prior to the effective date, forcing them to renew a registration which would no longer be required a short time later. Therefore, we also request DDTC make allowance for registration renewal during the 180-day period by extending the expiration dates until after the effective date of the final rule.

IV. Recommendation for Transition of Sound Suppressors to the CCL

NSSF respectfully requests DDTC consider transitioning control of sound suppressors from the USML to the CCL. At a minimum, NSSF requests DDTC to reconsider the current restrictive policy and allow for commercial exports of these items. The proposed rule retains control of silencers, mufflers, and sound suppressors under USML Category I(e). The current DDTC policy restricts exports of these articles to government and law enforcement agencies only. This policy has been in place for more than 15 years, and is largely out of date with the current worldwide sale and use of suppressors for commercial, sporting and hunting purposes.

Suppressors are a simple design consisting of a casing which contains material to absorb some of the gases from escaping from behind the projectile once it leaves the barrel. Suppressors have only a very limited and specialized military utility. The benefit of a suppressor is that it muffles the sound of the shot to a certain extent. The detriment of using a suppressor is that the projectiles lose both range and penetration. And the more effective the sound suppression is, then the less effective the projectile. In fact, government and law enforcement usage of suppressors is limited to special operating units and such.

However, sporting and hunting use of suppressors has been growing for many years. The largest international commercial suppressor markets are the United Kingdom and New Zealand, with smaller markets throughout Europe. In these countries, there are restrictions on how suppressors can be used. For example, in Norway suppressors can be used for hunting only when hunters are a certain distance away from residential areas. In the UK, suppressors are used with 99% of rifles and are considered a good solution to the problem of noise pollution. There were 154,958 firearm certificates on issue by the end of March 2017, representing a total of 559,302 firearms, which is an increase of 4% compared with the previous year. In New Zealand, suppressor ownership and use is legal with no special permit required. Most .22LR rimfire rifles are sold with threaded muzzles for suppressor use. The majority of rimfire suppressors are sourced from China which sells these items for approximately US\$6.00 with an estimated landed cost of US\$10 each. Suppressors for centerfire rifles are gaining in popularity, and local production in NZ is increasing with one-third of NZ produced suppressors being exported to the UK and Europe. The average price for these centerfire suppressors is approx. US\$360.

Within the US, the sporting and hunting use of suppressors has kept to the same trend as the international markets. There are 1.4 million suppressors registered in the U.S. as of April 2017. Our source is the ATF's annual Firearms Commerce in the U.S. publication exhibit 8, page 15: <https://www.atf.gov/resource-center/docs/undefined/firearms-commerce-united-states-annual-statistical-update-2017/download> The 2017 figure is triple the number of registered suppressors as of April of 2013 which was 494,452 units. And the movement of suppressors from the USML to the CCL will have no effect on domestic registration which will still be required.

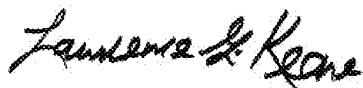

Based on the above data regarding the predominant commercial use of suppressors both in the US and overseas, and in comparison to the limited use of suppressors by select groups in the military or LE, we estimate that there are more suppressors being used now for hunting and sporting purposes than for military or law enforcement purposes. These articles can no longer be considered as having a critical military advantage with such widespread foreign availability. The only effect of restricting U.S. exports of suppressors to government or law enforcement agencies is to block U.S. manufacturers and exporters from participating in these legal and growing foreign markets. This is unfair for U.S. manufacturers who are not allowed to compete with foreign producers. If these articles are legal to own and to use commercially in the foreign country, then DDTC should allow for their export from the U.S.

In addition, there is no technology required or in use that warrants the stricter protections of the AECA. Because of the growing dual-use nature of these articles, export controls more correctly belong under the CCL. Controls on suppressors on the EAR would include both "NS" (national security) and "CC" (crime control), and licensing would still be required, but with allowance for exports intended for sporting and hunting purposes.

Firearms are dangerous. They are used to kill people everyday around the world. They should be subjected to more controls not less. The proposed change in regulations will make the world a far more dangerous place. The proposed rules look to be a for profit act for arms dealers and will do nothing for humanity nor the planet. The bottom line is that switching the regulations of firearms from the State Department to the Commerce Department will facilitate exports to oppressive regimes removing safe guards that keep these crime infested terrorist organizations from obtaining weapons which destabilize countries and cause mass migrations.

I am writing in opposition to the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Currently, firearms exports are classified as military. For this reason, they are under the regulation of the State Department, and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would have the following negative consequences:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms.

Firearms are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I OPPOSE any legislation that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. In addition, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. DO NOT ALLOW THIS TO HAPPEN.

I oppose the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and powerful firearms from the U.S. State Department to the U.S. Commerce Department

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

I write to express strong opposition to a proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This rule change would endanger our national security and set a dangerous precedent.

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would also remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I look forward to seeing this proposed change scrapped.

I am writing to OPPOSE the transfer of authority over arms exports to the Department of Commerce from the State Department. As a resident of the District of Columbia, I have no voting representative in the Congress, so I am making my voice heard directly, here and now.

Firearms are the instrumentalities of war: war is evil, and the best way to avoid it is to undertake to understand and combat the sources of war. Treating the export of firearms as a mere form of commerce is shortsighted, stupid and vile. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I have seen war in Vietnam as a journalist; I have tried to combat its aftereffects in the Balkans. Particularly in the latter, control of arms would have limited, to some extent, the predations on the civilian populations. I am utterly opposed to this change: keep firearms export controls in the hands of diplomats, not salesmen.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

DDTC Letter Docket DOS-2017-0046 6 July 2018

SPORTING ARMS AND AMMUNITION MANUFACTURERS' INSTITUTE, INC.
SINCE 1926

July 6, 2018

By E-mail: DDTCPublicComments@state.gov subject line, "ITAR Amendment – Categories I, II, and III"

By Internet: Federal eRulemaking Portal: www.regulations.gov - Docket DOS-2017-0046

Directorate of Defense Trade Controls
U.S. Department of State
2401 E. Street, N.W.
Washington, DC 20226

REFERENCE: Proposed Rule – International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III,

Dear Sir:

The Sporting Arms and Ammunition Manufacturers' Institute (SAAMI) respectfully submits the following comments to the above referenced Federal Register notice of proposed rulemaking 83 FR 24198, dated May 24, 2018. SAAMI is an association of the nation's leading manufacturers of firearms, ammunition and components, and an American National Standards Institute (ANSI) accredited standards developer. SAAMI was founded in 1926 at the request of the federal government and tasked with creating and publishing industry standards for safety, interchangeability, reliability and quality, coordinating technical data and promoting safe and responsible firearms use.

As the organization responsible for creating manufacturing standards for the firearm and ammunition industry, SAAMI is uniquely qualified to provide technical expertise on this matter. We have reviewed the proposed rule, and agree in general with the transition of the majority of firearms and ammunition to the Commerce Control List. Export controls of commercial firearms and ammunition which are not inherently military, have no critical military or intelligence advantage, and have predominant commercial applications correctly belong under the Export Administration Regulations (EAR).

We would like to raise the following points regarding several items enumerated in the revised Category III — Ammunition and Ordnance and ask for revision or reconsideration.

Pyrotechnic Tracer Materials

1. Subparagraph (a)(1) controls "Ammunition that incorporates a projectile controlled in paragraph (d)(1) or (3) of this category," and subparagraph (d)(1) controls "Projectiles that use pyrotechnic tracer materials that incorporate any material having peak radiance

above 710 nm or are incendiary, explosive, steel tipped, or contain a core or solid projectile produced from one or a combination of the following: tungsten, steel, or beryllium copper alloys.”

Subparagraph (a)(6) controls “**Ammunition employing pyrotechnic material in the projectile base** and any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm and designed to be observed primarily with night vision optical systems”.

By including the peak radiance parameter of “above 710 nm”, we note DDTC’s intention to control only tracer compositions that emit primarily in infrared which are for use with night vision devices. Such dim tracers, with infrared wavelengths from 710 nm to 1 millimeter, burn very dimly but are clearly visible through night vision equipment. This differentiates from bright tracers, which are the most common type of tracer, or subdued tracers, both of which can overwhelm night vision devices, rendering them useless.

Small arms tracer ammunition that includes pyrotechnic material below peak radiance of 710 nm has been sold commercially for sporting purposes for many years. For example, it is used as a training aid for marksmanship proficiency. We agree with the proposed rule which would maintain control on the USML of dim tracer ammunition with peak radiance above 710nm.

However, we wish to comment on the following:

- a. In subparagraph (a)(6) the radiance parameter of “above 710 nm” is not applied to the first part of the control sentence. As currently written, the phrase “ammunition employing pyrotechnic material in the projectile base” would be interpreted to include all tracer ammunition because the radiance parameter “above 710 nm” is not present in the phrase. Also, pyrotechnic tracer material is only employed in the projectile base, and therefore it is not necessary to enumerate a separate control specifying “pyrotechnic material in the projectile base”.
- b. We note some overlap in controls in subparagraphs (a)(1) and (a)(6). Subparagraph (a)(1) controls ammunition with projectiles controlled in subparagraph (d)(1) which includes “projectiles that use pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm”, i.e. tracer projectiles. Subparagraph (a)(6) controls “...any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm” which is already controlled in (a)(1) with reference to (d)(1). The only differentiation we note would be reference to ammunition “designed to be observed primarily with night vision optical systems”.

RECOMMENDATION: We recommend subparagraph (a)(6) be revised to delete the phrase “ammunition employing pyrotechnic material in the projectile base”. First, it is not necessary to articulate pyrotechnic material in the projectile base, and deletion of this phrase would remove the confusion that (a)(6) controls all ammunition with pyrotechnic

material including that with peak radiance below 710 nm. Second, the phrase is redundant since such ammunition with pyrotechnic material is controlled under (a)(1). We also request DDTC to provide clarification on which articles would be individually controlled under subparagraphs (a)(1) and (a)(6) since both control ammunition with pyrotechnic/tracer projectiles with a radiance parameter intended for use with night vision devices.

2. Subparagraph (a)(3) controls “Shotgun ammunition that incorporates a projectile controlled in paragraph (d)(2) of this category”, and subparagraph (d)(2) controls “Shotgun projectiles that are flechettes, incendiary, tracer, or explosive.”

We note that this paragraph does not include the parameter “pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm”. A SAAMI member company is currently producing shotgun ammunition with tracer projectiles for commercial use.

RECOMMENDATION: We reiterate our comments above regarding tracer ammunition, and recommend subparagraph (d)(2) be revised as follows: “Shotgun projectiles that are flechettes, incendiary, explosive, or that use pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm.” This change would make subparagraph (d)(2) consistent with the parameters in subparagraph (d)(1).

Non-metallic Cases

Subparagraph (a)(5) lists “Ammunition, except shotgun ammunition, based on non-metallic cases, or non-metallic cases that have only a metallic base, which result in a total cartridge mass 80% or less than the mass of a brass- or steel-cased cartridge that provides comparable ballistic performance.” Subparagraph (d)(8) controls “Non-metallic cases, including cases that have only a metallic base, for the ammunition controlled in paragraph (a)(5) of this category.”

This control would include plastic cartridge cases that fit the mass parameters shown. Polymer-cased ammunition (PCA) is currently sold to consumers in the commercial market, and is increasing in popularity. It is considered an alternative to reduce cost and weight in ammunition. This type of ammunition has a significant benefit to the environment and to firearm ranges by reducing both waste and the environmental impact and footprint of hunters and shooters. Controlling PCA under the ITAR would hinder further technological development in this area.

We recommend that control for non-metallic ammunition be removed from the USML and transitioned to the CCL to be controlled with similar metallic cartridge ammunition. Non-metallic cased ammunition is in development by several SAAMI members for sporting and hunting purposes. PCA meets SAAMI specifications for ballistic performance. Revised Category III should only include articles which are inherently military, and PCA does not meet that definition. New ECCN 0A505 on the CCL will control metallic cartridge ammunition (e.g. .308 Winchester) regardless of whether it is used in semi-automatic rifles for sporting use, or in

full-automatic rifles for military use. Therefore, controls for non-metallic cartridges should be the same. To effect this change, we recommend deletion of subparagraphs (a)(5) and (d)(8).

Primers

Subparagraph (d)(10) controls "Primers other than Boxer, Berdan, or shotshell types."

This description appears to except all primers used by SAAMI members. We believe DDTC's intent here is to control tubular primers used in medium or large caliber ammunition, which SAAMI members do not use in the manufacture of ammunition for sporting arms. We suggest that the designation of primer types could be simplified. Boxer, Berdan, shotshell and muzzleloading percussion caps are all called "cap type" primers by the Department of Transportation, and are classified as UN 0044, "Primers, cap type." We recommend DDTC consider using this description to define primers which would not be controlled on the USML.

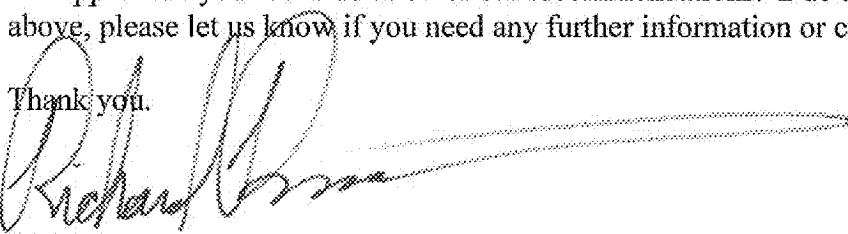

Technical Data

Subparagraph (e) controls technical data and defense services directly related to the defense articles enumerated in paragraphs (a), (b), and (d) of this category.

This exemplifies the need to make the changes we recommend above regarding pyrotechnic tracer material and non-metallic cases. Technical data related to these items is already in the public domain and well-known. Therefore, it should not be controlled on the USML.

We appreciate your consideration of our recommendations. Due to the technical nature of the above, please let us know if you need any further information or clarification for your review.

Thank you.

Richard Patterson
Executive Director

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

Firearms are military, and their export and oversight should be governed by the State Department, which has the knowledge and expertise to know when and where exports are acceptable.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

This comment is strong opposition to the proposed rule to transfer oversight of non-military firearms exports from the State Department to the Commerce Department. All we need is for the guns to easily get into the hands of people who are violent and want to hurt other people and Americans. The Commerce Department is not in the business of National Security and all sales should be questioned.

First let me say that this is a totally crazy idea that's proposed. I personally like the fact that with the State Department in control of the the semi-automatic assault and other powerful weapons export licenses that Congress is always notified of sales of large numbers of these types of weapons to foreign countries and can override the sale if needed.

Here are 3 ways that I see this rule change as being harmful to the welfare of all US citizens:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

The proposed rule change does the following and is unacceptable:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Please reject this change.

General Comment

I oppose the DOS proposed rule on international traffic in arms regulations for US munitions list categories I, II & III. On May 24, the Trump administration proposed to make it easier to export U.S. guns and ammunition globally, even though U.S.- exported firearms are already used in many crimes, attacks and human rights violations in many other nations. Action under the rule if it is enacted will endanger lives merely to enrich munitions dealers. The Trump administration proposal applies to assault weapons and other powerful firearms, moving export licenses from the State Department to the Commerce Department. The U.S. gun lobby has advocated for these policies. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually, but the Commerce Department does not have the resources to enforce export controls, even now.

The proposed rule change:

1. Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
2. Eliminates Congressional oversight for important gun export deals.
3. Transfers the cost of processing licenses from gun manufacturers to taxpayers.
4. Removes statutory license requirements for brokers, increasing risk of trafficking.
5. Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
6. Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
7. Reduces transparency and reporting on gun exports.
8. Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I strenuously object to any action of my government that makes the distribution of military style weapons - or for that matter ANY weapons - easier than it currently is. Our nation does not need to be exporting the violence that our gun culture causes here to infest other nations. The current proposal to shift control to the Commerce Department blatantly prioritizes gun dealer and manufacturer profit over civilization and safety.

The current proposal:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I do not want my country to stand before the world as preferring money to human rights!

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

We do not want to make it easier for terrorists to purchase US firearms and use them against their own people or the United States.

Beth Katz Public Comment on State Dept ITAR USML Cat I-III

July 6, 2018

To: Office of Defense Trade Controls Policy, U.S. Department of State
Regulatory Policy Division, Bureau of Industry and Security, U.S. Department of Commerce

In Reference to **FRN 2018-10366** (State) and **83 FR 24166** (Commerce).

I am writing to express my opposition to the proposed regulatory changes published in the Federal Register on May 24, 2018, as "International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III" (DOS_FRDOC_0001-4527) and "Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML)" (83 FR 24166). The proposed changes raise significant concerns for me as a parent, as an American citizen and taxpayer, and as someone who has studied and wrote my graduate thesis on the international small arms trade.

As a parent of a young child, I am deeply concerned about the impact that these changes will have on both global and domestic security for the foreseeable future. The proposed changes would greatly diminish oversight of the export of semi-automatic assault weapons, high capacity ammunition clips and training on such military equipment. The suggested changes would make it more likely that these dangerous weapons will end up in the hands of traffickers, terrorists or cartels and used against US service members. This increases the likelihood for greater destabilization and conflict worldwide as well as for these weapons to be trafficked back into the U.S. for nefarious uses here. The new rule also removes the block on 3D printing of firearms. This will facilitate unregulated gun production in the U.S. and abroad by making it possible for anyone, anywhere, with access to a 3D printer to produce a lethal weapon. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, these changes could generate many preventable tragedies. These proposed changes will create a world that is less safe for my son and other children to grow up in and to live; and therefore should not be adopted.

As an American citizen, I believe that these proposed changes diminish U.S. credibility in the eyes of the international community and compromise our global leadership. The proposed changes call for transferring gun export licensing from the State Department, an agency with a mission to promote stability, conflict reduction, and human rights, to the Commerce Department, an agency with mission to promote trade. In doing this, we are retreating on our global commitment to human rights and acting as though the export of firearms is just another commodity when the impact of these weapons is far more consequential and deadly. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research shows that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are sought out weapons used by criminal organizations in Mexico and other Latin American countries to perpetrate most of the increasing and record levels of homicides in those countries. The U.S. should not be adopting policies like the proposed changes which amplify this. Rather, we should be working collaboratively, as we have under previous administrations, to find ways to prevent and reduce firearms from being used to carry out human rights violations and crime.

As a U.S. taxpayer, I also find these proposed changes to be fiscally irresponsible. The new rule would transfer the cost of processing licenses from gun manufacturers to U.S. taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of

tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and the Commerce Department does not charge any fee for licensing. This means that U.S. taxpayers, such as me, will absorb the cost of reviewing applications and processing licenses rather than the gun exporters that benefit from these sales. In addition, U.S. taxpayers also will need to shoulder the costs of having to build the capacity and expertise of the Commerce Department to properly administer the proposed changes. The Commerce Department currently does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce (see Department of Commerce Budget in Brief FY2017, p. 57, <http://www.osec.doc.gov/bmi/budget/FY17BIB/AllFilesWithCharts2.pdf>). The Commerce Department's Bureau of Industry and Security's enforcement office, who would be charged to oversee the new changes, does not have staff in Latin America, Africa, or many other parts of the world and is not equipped to take the same level of preventive measures for end-use controls. In stark contrast, the State Department, who oversees these items while they reside on the USML, has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. The Commerce Department does not have these resources and developing them will come at a substantial cost to U.S. taxpayers.

Finally, as someone who has studied and researched the international small arms trade, I can confidently say that greater regulation, not less as the proposed rule would enable, is needed to curb the disproportionate impact that these weapons have on fueling conflict, terrorism, and crime around the world. One particularly troubling part of the new rule is its reduction of end-use controls for gun exports. It would eradicate the State Department's Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department within State that compiles the U.S. Government's information on human rights violations, decreasing the ability to effectively stop weapons licenses from going to international human rights violators. End-use controls also are weakened by removing the registration of firearms exporters, a requirement since the 1940s. Under the current rules, registration of exporters lets the State Department check an exporter's history whenever a manufacturer or broker requests a license for a particular gun export sale. Migrating the licensing to the Commerce Department will remove new exporters and brokers of these firearms from the State Department database, losing an important part of the evidentiary trail that enables the prosecution of arms traffickers.

It is for all the reasons listed above that I urge you to reject the proposed changes and to keep the items currently listed on the State Department-administered US Munitions List (USML) intact.

Thank you for your time and consideration.

Sincerely,

Beth Katz
Omaha, Nebraska

General Comment

The proposed change from the State Department to the Commerce Department overseeing the exports of firearms is a change from a department that has the necessary staff, knowledge and experience to properly handle such exports to an department which has neither the necessary staff, knowledge and experience and the consequences will be fraught with problems.

In addition as the NRA is in favor of this proposed change it should be a concern the prime motivation is for further accelerated proliferation of guns and greater profits for gun manufacturers, along with increased violence and mayhem in the rest of the world.

Thus, this change has no merit and must be summarily rejected.

General Comment

I strongly oppose the proposed rule change. It treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. In addition, it eliminates Congressional oversight for important gun export deals and transfers the cost of processing licenses from gun manufacturers to taxpayers.

The Commerce Department does not have the resources to enforce export controls, even now, and this proposed rule change would transfer gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade. (!)

Please do not approve this rule change. Thank you.

General Comment

American has seen the bloody and horrifying cost of unregulated guns in our country. The rest of the world must not suffer needless injuries and death from gunshot wounds simply so American gun manufacturers can make more money.

I oppose moving export license oversight for firearms from the Department of State to the Department of Commerce. The proposed rule change eliminates necessary Congressional oversight for important gun export deals; places the cost for processing licenses on the taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change benefits the profits of American gun makers at the cost of lives around the world.

I object to the proposed rules:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I could not be more vehemently opposed to this!! Making it easier for people around the world to have dangerous weapons is, at the least, counterintuitive!! We are already suffering from our mistakes with guns being trafficked to Mexico and Latin America, resulting in the migration of those seeking asylum in the U.S. to escape the violence of gangs and cartels. Let's learn from these and other mistakes, such as arming the Afghans many years ago!

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I am against any and all changes, moves from one agency, that is for the protection of citizens, to another agency that only wants to give extreme monetary gain to gun makers and sellers, with no thought of the possible threat to thousands of innocent peoples lives! Also, the dropping of non- automatic ASSAULT-RIFLES and the LARGER SIZED CLIPS, by their names alone point to their military use, and not to their use for hunting, unless you want to add that hunting and killing whole herds of deer, elk, mountain goats, moose, bears etc. is what you call hunting! There has always been a limit to the number of animals hunted by individual hunters. The word, Assault, used with any guns, has the meaning of attacks upon groups, or masses of individual beings, and those beings are most likely to be humans, there-fore, it is a weapon of mass killing, or murder, if used with regular citizens, as the perpetrator. The complete, Trump Proposal, should be dropped in the nearest trash bin!

I am very concerned about the proposed change to easier to spread murder weapons legally across the world, just because the gun industry wants to make more profit. This is not in our interest as a nation, to be complicit in increasing homicide rates abroad. Some of the reasons to not approve this proposed rule change are:

- 1) Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- 2) Eliminates Congressional oversight for important gun export deals.
- 3) Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- 4) Removes statutory license requirements for brokers, increasing risk of trafficking.
- 5) Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- 6) Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- 7) The Commerce Department does not have the resources to enforce export controls, even now.
- 8) Reduces transparency and reporting on gun exports.
- 9) Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Thanks for this opportunity to share my views as a citizen and voter, and to allow me to express my desire to make the world a safer place, not one where firearms end the lives of thousands every year.

General Comment

In a free capitalist society companies have and do lobby aggressively for total unregulated ability to sell their wares inside and outside the country. Most products that are likely to cause danger to others or to consumers are highly regulated and rightly so like automobiles, medicines and even foods. This protection of the American and world consumer is inherent to the U. S. capitalist core. One exception is guns. Why?

Reasons abound. The point though is about the legality and morality of both selling internally and exporting to the world without logical restrictions of highly dangerous guns and war-caliber weapons to regular citizens in the name of a companys right. What about the right to protect consumers, families and communities? The government has both the economic and moral obligation to protect consumers and all citizens. The recent past legislation expired in the late 1980s that prohibited the sale of automatic and other war-calibre weapons to regular citizens inside and outside the U. S. was a bi-partisan agreement, totally in line with the U. S. Constitution. It is not a coincidence that violence in the last 20+ years has dramatically increased both in the U. S. and is currently ravaging neighboring countries. Unfortunately, this tragedy is largely caused by U. S. supplied and free-flowing arms that have no reason to be in the hands of law abiding citizens and even less accessible to dubious groups. Governments law enforcing forces are overextended and often are part of the many victims high-powered guns enable. A safety-driven and regulated gun industry is otherwise feasible.

Exporting the U. S. phoneme of mass shootings (it does not happen around the world; only with recent terrorist groups), increased violence facilitated by easy availability of guns that should only be allowed in case of war, higher risks of gun-assisted suicide and young violence are against every Americans safety. Similarly, expanding a market of death and violence by U. S. companies does not make any sense.

Restate previous limits for starters. Show what American capitalism is really all about, growing wealth and prosperity peacefully. Regulation of danger is part of this.

General Comment

I strongly OPPOSE switching the regulation of firearms exports from the State Department to the Department of Commerce. It would remove the State Department's ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally; It would remove licensing requirements for brokers; and it would stop the program that inspects pre-license guns and issues reports. Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and contribute to organized crime and terrorism.

There is NO need to switch control of the export of firearms unless it is to pay for firearms lobbyists.

This is just another ruse by the NRA to gain more control and

have less oversight into their actions. PLEASE DO NOT APPROVE THIS MOVE.

Sincerely, a concerned citizen

Judith Weeks

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am extremely concerned about these proposed rule changes. Overseas weapons sales are not just simple financial transactions with little or no consequences if goods are ultimately resold or otherwise passed along to third parties. Allowing weapons to leave these borders should require extra oversight to make sure that we do not inadvertently cause problems diplomatically or allow our troops do not find themselves under attack from our own weapons. These are complex matters that require a careful weighing of many interests. The system currently in place, with the State Department providing oversight, is better able to address the myriad of concerns. The Commerce Department simply is incapable of bringing the same degree of insight to these matters as their focus is only on the monetary, rather than the practical implications for foreign policy and national security. The president and those in his administration like to talk about their concern for national security, but these proposed changes suggest otherwise. I trust actions, not empty words. These changes should not be adopted.

Name: Neta Jackson

General Comment

My name is Neta Jackson, and I live in the Chicago area. I am very concerned about having common sense gun control and oversight of the gun industry, which in no way robs our citizens of their rights under the Second Amendment.

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce

Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

Thank you!

Neta Jackson

I am strongly opposed to this rule change and ask that regulations of firearms remain under the jurisdiction of the State Department. The sale of firearms to other countries is a matter of national security, and it is not only inappropriate but dangerous for these sales to be regulated by the Commerce Department. The dangers this rule change pose include firearms reaching oppressive regimes, organized crime, and terrorists, as well as 3-D printing of firearms. There is no justification for this rule change - the profits of gun manufacturers and their lobbyists do not justify the increased danger to Americans and our national security that this proposed rule change poses.

I am deeply concerned by the proposal to move firearms from ITAR to EAR.

I work in the space industry, where we must be exceptionally careful in our handling not only of materials but of knowledge concerning anything that could be used in a weapons system. We are taught that a rocket, even one designed for peaceful purposes, is to be treated as a potential missile.

If ITAR regulates potential weapons, it ought to regulate actual weapons. If it doesn't, perhaps we should be looking at sharing more of our space technologies (which aren't weapons) with the rest of the world.

Moreover, the State Department not Commerce ought to have the final say on where weapons are exported and by whom, as weapon export has an obvious effect on our ability to participate in diplomacy.

General Comment

I am opposed to the proposed rule change being sought by the State Department. This is a dangerous move by the State Department which will create more gun violence for other countries involved in the sale of US made firearms and munitions. Semi automatic assault rifles should not be reclassified by the Dept. of State as "non-military" type arms. Members of the US military, as well as groups engaged in armed conflict around the world. The proposal to essentially transfer the cost of processing licensing fees from gun manufacturers to taxpayers is unacceptable. Taxpayers should not have to bear the financial cost of the transactions which companies that sell guns engage in. The removal of statutory license requirements for brokers increases risk of trafficking of these firearms. Businesses in the United States should be able to sell guns to foreign governments, but under the assurance that the weapons sold will not fall risk to trafficking. This proposal enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. I am firmly opposed to removing this current prohibition on the 3D printing of firearms. We do not need to add even more enforcement responsibilities to the Dept. of Commerce when it currently has a hard time regulating current export controls. This provision transfers gun export licensing from an agency with a mission of promoting stability, conflict reduction, and human rights, to an agency with mission to promote trade. I, as a private citizen and a taxpayer am against all potential changes which the Department of State has proposed with regards to the exporting of firearms and munitions.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I opposed this proposed rule for the following reasons:

- >Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- >Eliminates Congressional oversight for important gun export deals.
- >Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- >Removes statutory license requirements for brokers, increasing risk of trafficking.
- >Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- >Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- >The Commerce Department does not have the resources to enforce export controls, even now.
- >Reduces transparency and reporting on gun exports.
- >Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I urge you to oppose this legislation.
Thank you!

I totally disagree with moving this to the Commerce Dept! We cant control the massive amount of guns and killings here and to make it easier to export puts other people and countries at risk. Its shameful to want to profit more by causing deaths! What has this administration become?? Ruthless, heartless, immoral, NOTHING like the Republican Party I once knew! Below are additional reasons why this shouldnt happen.

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I oppose the proposed rule primarily because it eliminates congressional oversight, transparency and reporting of gun export transactions. Further the proposal would enable unchecked gun production in the U.S. and uncontrolled exports abroad by removing the restriction on 3D printing of firearms.

Further, there is no valid or rational reason for the proposed rule's treatment of semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Statutory license requirements for brokers, an important check on trafficking of the regulated categories of weapons, would be eliminated by the proposed rule with no alternative means of such control to replace the present licensing system.

The proposed rule, if enacted, would serve only the commercial interests of weapons manufacturers, not the interests American gun owners, the general public in the U.S. or those in other countries and regions experiencing or at risk of civil wars, criminal gang violence and intimidation by unpoliced civilian actors.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

I am writing in opposition to the proposal for the U.S. to become a major international weapons dealer. The proposed rule changes are wrong and dangerous for many reasons including:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Please do not go forward with this proposed change in rule.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain

rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to de

I wish to comment on the proposal making it easier to export U.S. guns and ammunition globally.

As a parent and a grandparent, this is an issue I feel very strongly about.

I have read that this proposal classifies semi-automatic assault rifles as non-military when they are used by our army. They are also used by opposing forces in armed conflicts, and are prohibited for civilian possession in many countries.

It would remove Congressional oversight for important gun export deals.

Taxpayers would have to pay processing licenses instead of gun manufacturers.

It removes statutory license requirements for brokers, increasing risk of trafficking.

I understand that the Commerce Department does not even have the resources to enforce export controls, as it is.

It reduces transparency and reporting on gun exports.

There are many other reasons that I know the above proposal is a very bad idea that will cost untold lives. Please reconsider this ill timed and very unwise proposal.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

The last thing the U.S. needs is to make it easier for businesses to supply powerful assault weapons to the world's most unstable munitions buyers. Do not enact this legislation because it:

- *Treats semi-automatic assault rifles - developed for wartime use - as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
 - *Eliminates Congressional oversight for important gun export deals.
 - *Transfers the cost of processing licenses from gun manufacturers to taxpayers.
 - *Removes statutory license requirements for brokers, increasing risk of trafficking.
 - *Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
 - *Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have the resources to enforce export controls, even now. This exemption for a new manufacturing technology cannot be applied to weapons production, if we are to consider ourselves as Americans responsible world diplomats.
 - *Reduces transparency and reporting on gun exports.
 - *Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.
- Do not re-direct us on a path to a more violent world, particularly not with taxpayer dollars.

In a moment of history when a majority of Americans are in favor of stronger gun law, this?

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. When the first murder using a 3D printed weapon that you facilitated through this rule happens, I hope that you notice, and remember that you could have prevented it. Do better for the people. The taxpayers, the parents, the students, the teachers, the international community, need the US government to do better for humans, not corporations and lobbyists. Step up and lead.

Is this really a good way to export American values around the world?

Isn't this just yet another result of powerful lobbying activities by gun manufacturers to increase sales?

What possible good can come of this other than increasing the profits of the gun industry?

Wouldn't it be better to promote American values in the form of diplomacy, educational exchanges, artistic exchanges?

We should be making it more difficult to obtain these weapons rather than easier if we are truly interested in a more peaceful world.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I oppose re-classifying these regulated weapons from where they are now: "military", under export regulation by the State Department, to the regulation by the Commerce Department. The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. That means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

As "military", these regulated weapons are under the regulation of the State Department, and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

1 It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2 It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

NATIONAL RIFLE ASSOCIATION OF AMERICA
INSTITUTE FOR LEGISLATIVE ACTION
11250 WAPLES MILL ROAD
FAIRFAX, VIRGINIA 22030

July 6, 2018

Mr. Robert Monjay
Office of Defense Trade Controls
United States Department of State
2401 E Street, Northwest
Washington, District of Columbia 20226

Via Online Submission: <https://www.regulations.gov/docket?D=DOS-2017-0046>

**Re: Docket No. DOS-2017-0046; RIN 1400-AE30; International Traffic in Arms
Regulations: U.S. Munitions List Categories I, II, and III**

Dear Mr. Monjay:

I am writing on behalf of the National Rifle Association (NRA) to provide the association's comments on the above proposed rule (the proposal). With some six million dues-paying members, the NRA is America's premier defender of the civil right protected by the Second Amendment. Our members include individuals and businesses that would be directly affected by the changes in the proposal, including gunsmiths, firearm instructors, journalists and writers covering firearm technology and development, hunters, competitive shooters, and manufacturers.

The NRA is very pleased to see that the project of Export Reform has finally circled back to the place where it began, with proposed amendments to Categories I, II, and III of the U.S. Munitions List (USML). These were among the first of the changes planned for the large-scale undertaking to update export controls on dual-use items, and rightly so. The Second Amendment protects an individual right to possess and carry firearms in case of confrontation, extending to

arms in common use among the population for lawful purposes.¹ America boasts hundreds of millions of privately-owned firearms² and a robust “gun culture” that has produced countless books, magazine articles, videos, websites, online forums, etc., that exhaustively detail firearm technology and use. It is difficult to imagine any information about the design, development, production, manufacturing, and use of firearms that is not already within the public domain. This same information is commonly available overseas, as are the types of firearms and ammunition the proposal would move off the USML and onto the Commerce Control List (CCL). Meanwhile, the might and sophistication of the U.S. military – as well as America’s armed populace – ensure that no foreign enemy wielding the type of arms at issue in these proposed amendments to the USML could pose a serious threat to this nation’s security.

Of course, movement of commonly-available firearms and ammunition to the CCL would not leave their export unregulated. America already has one of the most well-established and closely-administered systems of regulation for commercial production and distribution of firearms and ammunition in the world, and the proposal would not change that. It is clear from the companion rulemaking published by the Commerce Department that items moving off the USML would remain closely controlled, with the necessity of export licenses remaining the norm. Foreign individuals’ access to firearms and ammunition would also remain regulated under the federal Gun Control Act and the National Firearms Act. Furthermore, the Commerce Department has long regulated exports of various shotguns, as well as their parts, components, accessories, and ammunition. Thus, it has existing knowledge of and relationships with many of the entities the proposal will affect. Those entities, in turn, will also have some familiarity with the Department’s regulatory environment and procedures.

The NRA believes that, on the whole, the proposal correctly balances the imperatives of national and global security, allocation of oversight resources, and promotion of American industry, innovation, and competitiveness. We do, however, think it could be improved in several particulars. We also believe that the timing for the implementation of the rule deserves careful consideration.

Specifically, our concerns involve the following:

- **The retention of firearm sound suppressors on the USML is contrary to the guiding principles of Export Reform and does not serve its purposes.** Suppressors should also be moved to the CCL, unless they are specifically designed for use only with firearms that remain on the USML.

¹ *District of Columbia v. Heller*, 554 U.S. 570, 592, 624-25 (2008). *See also McDonald v. Chicago*, 561 U.S. 742 (2010) (Second Amendment right to keep and bear arms is fully incorporated against state and local action by virtue of the Fourteenth Amendment).

² The Small Arms Survey estimates that as of the end of 2017, there were 121 firearms for every 100 residents in the U.S., for a total of some 393.2 million guns. The program director for the Small Arms Survey Institute notes, however, that “there is no direct correlation at the global level between firearm ownership and violence.” *See* Edith M. Lederer, “Global survey shows more than 1 billion small arms in world, mostly owned by civilians and mostly in the U.S.,” *ChicagoTribune.com*, June 18, 2018, <http://www.chicagotribune.com/news/nationworld/ct-survey-small-arms-world-civilians-20180618-story.html>.

- The designation of “high capacity magazines” that would remain on the USML is based on an arbitrary number, rather than any qualitative difference in the technology or military character of the item. The governing consideration should be whether they are specifically designed for use only with firearms that remain on the USML, not their capacity.
- Where manufacturers and exporters need to implement new compliance procedures for items moving from the USML to the CCL, the final rule should have a delayed implementation date; where requirements that once pertained under the International Traffic in Arms Regulations (ITAR) have no analogues under the Export Administration Regulations (EAR), the changes should take effect immediately.

For these reasons, and as detailed below, the NRA supports the proposal but advocates for minor revisions before its publication as a final rule.

I. Firearm Sound Suppressors, As Such, Do Not Meet the Prerequisites for Control on the USML Articulated by the Proposal and Therefore Should be Controlled Under the CCL.

As noted in its supplementary information, the proposal is part of a longstanding effort to “revise the U.S. Munitions List so that its scope is limited to those defense articles that provide the United States with a critical military or intelligence advantage or, in the case of weapons, are inherently for military end use.” Whether or not sound suppressors for firearms are characterized as “weapons,” there is no plausible argument that the devices meet these standards.

A firearm sound suppressor is basically a metal cylinder surrounding internal baffles that slow and cool escaping gas to decrease the volume of the firearm’s muzzle report. The devices reduce, but do not eliminate, the sound of gunshots.³ Suppressors have been commercially available since the first decade of the 1900s.⁴ The technology necessary to produce them is simple and well-understood throughout the developed world. Detailed design, development, production, and manufacturing information for firearm sound suppressors is pervasively available in the public domain, including on the Internet.⁵ Similar devices are used to moderate the sound of various other consumer products powered by internal combustion, including automobiles, chainsaws, and lawnmowers.

³ Glenn Kessler, “Are firearms with a silencer ‘quiet’?” WashingtonPost.com, March 20, 2017, https://www.washingtonpost.com/news/fact-checker/wp/2017/03/20/are-firearms-with-a-silencer-quiet/?noredirect=on&utm_term=.301e14951dd4.

⁴ Stephen Halbrook, “Firearm Sound Moderators: Issues of Criminalization and the Second Amendment,” 46 Cumb. L. Rev. 33, 42 (2015).

⁵ A quick web browser search will reveal numerous webpages and videos offering detailed instructions on constructing suppressors of various levels of sophistication, from products produced with lathes and other machine tools to improvised models made from such materials as PVC, flashlight tubes, oil filters, and solvent traps. There’s even a detailed suppressor schematic on the ATF’s own website: <https://www.atf.gov/file/silencer-cut-away>.

Suppressors do not provide the United States with any critical military or intelligence advantage. They are not unique to the United States and are in fact the rare type of firearm-related product that historically has been regulated more closely in this country than in a number of other countries with otherwise relatively strict gun control laws. In some foreign countries, there are no special requirements to acquire or possess firearm suppressors; in certain others, they are presumptively available to those with a firearm license.⁶ Firearm suppressors are already in use by military forces, law enforcement agencies, and civilian firearm owners across the world. Simply put, any country sophisticated enough to produce firearms is sophisticated enough to produce firearm sound suppressors.

Firearm sound suppressors, by themselves, are harmless and cannot accurately be classified as “weapons.” They are only useful when actually attached to a firearm. Even then, they do not make the firearm any more lethal. Their primary advantage is to protect the hearing of the firearm’s user and to decrease the sound signature of firearms so their use is less noticeable and has fewer collateral effects on those in vicinity of the firearm’s discharge.

And even assuming, for the sake of argument, suppressors could be characterized as “weapons,” they are not “inherently military.” Suppressors are regulated and taxed under U.S. law,⁷ but they are readily available to those who are legally eligible to own firearms. They are lawful for private possession in 42 states and may be lawfully used for hunting in 40 states.⁸ Suppressors adorn the firearms of plinkers, hunters, competitors, and law enforcement officers. According to the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), there were 1,297,670 suppressors registered under the National Firearms Act as of February 3, 2017, with nearly 400,000 such registrations occurring in the 12 months preceding that date alone.⁹ As previously mentioned, suppressors are also commonly used by law enforcement agencies and private firearm owners in other countries as well.

In its current form, the proposal does not differentiate between suppressors for use on firearms that would be regulated under the USML and those that would not. This could mean that firearms that would otherwise be regulated under the CCL will remain on the USML because they have integrated suppressors. It could also mean that firearm instructors would have to refrain from allowing suppressors to be used in their classes for fear of providing unauthorized “defense services.” This is contrary to the spirit and intent of Export Reform and does nothing to further U.S. or international security interests.

Given that there is no special military or national security significance to firearm sound suppressors, there is no convincing argument for retaining them on the USML. Like flash suppressors, they should be generally subject to the CCL. If they are going to be retained on the USML at all, it should only be to the extent that they are “specially designed” for the firearms

⁶ 46 Cumb. L. Rev. at 72-4.

⁷ See National Firearms Act, 26 U.S.C. §§ 5801-5872; Gun Control Act, 18 U.S.C. §§ 921-931.

⁸ American Suppressor Association, Education Webpage, <https://americansuppressorassociation.com/education/> (last visited July 6, 2018).

⁹ Stephen Gutowski, “ATF: 1.3 Million Silencers in U.S. Rarely Used I Crimes,” FreeBeacon.com, Feb. 17, 2017, <http://freebeacon.com/issues/atf-despite-nearly-1-3-million-silencers-united-states-rarely-used-crimes/>.

that would also continue to be so controlled. Because that distinction would be difficult to administer as a practical matter, however, the best option is simply to control the general category of firearm sound suppressors under the CCL.

II. The Proposal's Treatment of Magazines is Arbitrary and Capricious.

The proposal treats magazines as “high capacity” and therefore subject to the USML if they have a capacity of greater than 50 rounds, “regardless of jurisdiction of the firearm.” It offers no explanation for this threshold. Whatever the thinking behind it may be, a 51-round magazine provides no greater critical military or intelligence advantage than a magazine of lesser capacity, nor is it any more inherently for military end use.

Magazines, whatever their capacity, are among the most simple and utilitarian of firearm-related items. In typical form, they consist of a metal box or tube with a floor plate that contains a spring with a follower at the top. A firearm that can accept a detachable magazine can accept a magazine of virtually any size. All that is necessary to create a magazine of greater capacity is a longer box and spring. Drum magazines typically utilize a cylindrical chamber and a wound spring or ratcheting mechanism to allow for greater capacity in a more compact unit, but neither configuration uses sophisticated or closely-held technology. Like firearm sound suppressors, technical data for magazines with capacities above and below 51 rounds is available in the public domain, including online, and has been since at least the early 20th Century.¹⁰

United States law does not limit the capacity of magazines for any sort of firearm available to private citizens (a handful of states, however, do impose magazine capacity limits, typically of 10 rounds). Magazines with capacities in excess of 50 rounds are readily available on the commercial market. They are used by practical shooting competitors, as well as by many gun owners who appreciate the versatility and convenience they provide. Even BB guns for the youth market that use springs or compressed air often have reservoirs that hold hundreds of rounds. While these non-powder guns obviously are not and would not be defense articles under the proposal, their capacity demonstrates the fact that marksmen of all types appreciate the ability to operate their guns without frequent reloading.

Demonstrating the arbitrary nature of controlling magazines based on their capacity is the fact that they can easily be clipped, taped, or otherwise attached to one another, with reloads accomplished in mere moments.

As with sound suppressors, it makes no sense that a given curriculum of firearm instruction that would otherwise be uncontrolled under the proposal could potentially be re-characterized as a “defense service” if it happened to involve a “large capacity” magazine.

¹⁰ See, e.g., European Patent Office Patent No. 8172, “A New or Improved Cartridge Magazine for Small Arms and Machine Guns,” Accepted March 6, 1919 (providing detailed specifications for a drum-type magazine), available at <https://worldwide.espacenet.com/publicationDetails/originalDocument?CC=GB&NR=191508172A&KC=A&FT=D&ND=3&date=19190306&DB=EPODOC&locale=> (last visited July 6, 2018).

For these reasons, we recommend that firearm magazines be controlled under the CCL. If they are controlled under the USML at all, it should only be to the extent they “specially designed” solely for firearms that remain on the USML.

III. The Final Rule Should Take Effect Immediately to the Extent Requirements Are Eliminated and Phase in Other Changes to Allow Regulated Entities Time to Adapt.

When the final rule governing Categories I, II, and III of the USML is published, certain changes should take effect immediately, while others should be phased in to allow regulated entities time to adapt.

Changes that merely eliminate requirements altogether should take effect immediately. For example, there is no justification for continuing to make “manufacturers” of articles that would be moved off the USML register with the Department of State.

On the other hand, where control of an item changes from the USML to the CCL, necessitating new procedures by the regulated entity, implementation of the final rule’s effective date should be delayed to allow for new compliance systems to be established.

Licenses granted under the ITAR should also be grandfathered for all outstanding transactions.

The NRA does not have any specific recommendations for a timeline of implementation for enforcing new requirements and procedures. We will defer to the entities whose day-to-day operations will be directly affected by the changes in the final rule.

Conclusion

The NRA is very pleased to see Export Reform finally turn its attention to Categories I, II, and III of the USML. The proposal charts a positive course that will contribute to national security, enhance the competitiveness of U.S. businesses, and benefit ordinary gun owners by mitigating the potential for the ITAR to burden innocent conduct that does not implicate national security. We hope you will take the suggestions offered herein seriously to further promote the worthy goals of this effort, and we appreciate the opportunity to provide input.

We have also included our submission on the Bureau of Industry and Security’s companion rulemaking and incorporate those comments herein by this reference.

Sincerely,

Christopher Zealand

Re: **Docket No. BIS-2017-0004; RIN 0694-AF47; Control of Firearms, Guns,
Ammunition and Related Articles the President Determines No Longer Warrant
Control Under the United States Munitions List (USML)**

Greetings:

I am writing on behalf of the National Rifle Association (NRA) to provide the association's comments on the above proposed rule (the proposal). With some six million dues-paying members, the NRA is America's premier defender of the civil right protected by the Second Amendment. Our members include individuals and businesses that would be directly affected by the changes in the proposal, including gunsmiths, firearm instructors, journalists and writers covering firearm technology and development, hunters, competitive shooters, and manufacturers.

The NRA is very pleased to see that the project of Export Reform has finally circled back to the place where it began, with proposed amendments to Categories I, II, and III of the U.S. Munitions List (USML). These were among the first of the changes planned for the large-scale undertaking to update export controls on dual-use items, and rightly so. The Second Amendment protects an individual right to possess and carry firearms in case of confrontation, extending to

arms in common use among the population for lawful purposes.¹ America boasts hundreds of millions of privately-owned firearms² and a robust “gun culture” that has produced countless books, magazine articles, videos, websites, online forums, etc., that exhaustively detail firearm technology and use. It is difficult to imagine any information about the design, development, production, manufacturing, and use of firearms that is not already within the public domain. This same information is commonly available overseas, as are the types of firearms and ammunition the proposal would regulate under the Commerce Control List (CCL). Meanwhile, the might and sophistication of the U.S. military – as well as America’s armed populace – ensure that no foreign enemy wielding the types of arms at issue in these proposed regulations could pose a serious threat to this nation’s security.

Of course, movement of commonly-available firearms and ammunition to the CCL would not leave their export unregulated. America already has one of the most well-established and closely-administered systems of regulation for commercial production and distribution of firearms and ammunition in the world, and the proposal would not change that. It is clear from the proposal that items moving off the USML would remain closely controlled, with the necessity of export licenses remaining the norm. Foreign individuals’ access to firearms and ammunition would also remain regulated under the federal Gun Control Act and the National Firearms Act. Furthermore, the Commerce Department has long regulated exports of various shotguns, as well as their parts, components, accessories, and ammunition. Thus, it has existing knowledge of and relationships with many of the entities the proposal will affect. Those entities, in turn, will also have some familiarity with the Department’s regulatory environment and procedures.

The NRA believes that, on the whole, the proposal correctly balances the imperatives of national and global security, allocation of oversight resources, and promotion of American industry, innovation, and competitiveness. We do, however, think that it could be improved in several particulars. We also believe that the timing for the implementation of the rule deserves careful consideration.

Specifically, our concerns involve the following:

- **§ 740.9 Temporary imports, exports, reexports, and transfers (in-country) (TMP) and § 758. 10 Entry clearance requirements for temporary imports – The use of the Automated Export System (AES) is impractical and inappropriate for private travelers exporting a personal firearm they temporarily imported into the U.S. for**

¹ *District of Columbia v. Heller*, 554 U.S. 570, 592, 624-25 (2008). *See also McDonald v. Chicago*, 561 U.S. 742 (2010) (Second Amendment right to keep and bear arms is fully incorporated against state and local action by virtue of the Fourteenth Amendment).

² The Small Arms Survey estimates that as of the end of 2017, there were 121 firearms for every 100 residents in the U.S., for a total of some 393.2 million guns. The program director for the Small Arms Survey Institute notes, however, that “there is no direct correlation at the global level between firearm ownership and violence.” *See* Edith M. Lederer, “Global survey shows more than 1 billion small arms in world, mostly owned by civilians and mostly in the U.S.,” *ChicagoTribune.com*, June 18, 2018, <http://www.chicagotribune.com/news/nationworld/ct-survey-small-arms-world-civilians-20180618-story.html>.

lawful purposes. The current system, which relies upon the ATF Form 6NIA, should be maintained without modification for such persons.

- § 740.14 Baggage (BAG) and § 758.1 The Electronic Export Enforcement (EEI) filing to the Automated Export System (AES) – The use of the AES is impractical and inappropriate for private travelers temporarily exporting a personal firearm for lawful purposes. The current system, which relies upon the CBP Form 4457, should be maintained without modification for such persons until such time as U.S. Customs and Border Protection engages in a public rulemaking process to resolve the current problems.
- § 758.1 The Electronic Export Enforcement (EEI) filing to the Automated Export System (AES) and § 762.2 Records to be retained – Expanding the data elements necessary for AES filings would exacerbate the problems for private travelers temporarily exporting a personal firearm and violate the spirit of Congressional prohibitions against federal firearm registries. Private travelers temporarily exporting personal firearms should continue to be able to use the CPB Form 4457 without the firearm's information being captured by a federal database.
- Where manufacturers and exporters need to implement new compliance procedures for items moving from the USML to the CCL, the final rule should have a delayed implementation date; where requirements that once pertained under the International Traffic in Arms Regulations (ITAR) have no analogues under the Export Administration Regulations (EAR), the changes should take effect immediately.

For these reasons, and as detailed below, the NRA supports the proposal but advocates for revisions before its publication as a final rule.

I. The AES System is Impractical and Inappropriate for Use by Private Travelers.

- A. The AES requirement was introduced without sufficient or accurate notice to the public.

The International Traffic in Arms Regulations historically had included an exemption under 22 CFR §123.17(c) that allowed U.S. persons to temporarily export without a license up to three nonautomatic firearms and not more than 1,000 cartridges therefor. This exemption was geared toward hunters, sportsmen, competitors, and others who travel overseas with firearms to be used for sporting and other lawful purposes.

In 2011, DDTC published a Federal Register notice of proposed rulemaking entitled International Traffic in Arms Regulations: Exemption for Temporary Export of Chemical Agent Protective Gear.³ The supplementary information to that rulemaking focused on amendments to 22 CFR §123.17 pertaining to “the temporary export of chemical agent protective gear for

³ 76 Fed. Reg. 16353 (March 23, 2011).

exclusive personal use ...” It also mentioned that “an exemption for firearms and ammunition is clarified by removing certain extraneous language that does not change the meaning of the exemption.”⁴

In fact, the proposed change to the firearms and ammunition exemption was a material and substantial change to the status quo. It would require for the first time that “the individual must ... present the Internal Transaction Number (ITN) from submission of the Electronic Export Information in the Automated Export System per § 123.22(b)” to use the exemption.⁵

But because the notice only printed the amendments to 22 CFR §123.17 and omitted the existing text of that section, it was not clear from the face of that notice what the context of this new requirement was. The notice’s inaccurate portrayal of the change as a mere “clarification” further contributed to obscuring the significance of this new language. Thus, the new requirement for temporary firearms and ammunition exports went largely unnoticed by relevant stakeholders.

The final rule was published on May 2, 2012.⁶ Its supplementary information included a similarly inaccurate description of the firearm exemption amendment. “Section (c)(3) is revised to remove what is in practice extraneous language,” it stated.⁷ “Subject to the requirements of (c)(1)–(3), the exemption applies to all eligible individuals (with the noted exceptions). Thus, while the text is revised, the meaning of (c)(3) is not changed.”⁸

Unlike the notice for the proposed rule, however, the notice of the final rule included the full text of subsection (c), which made clear the AES filing requirement pertained to those claiming the licensing exemption for temporary firearm and ammunition exports. Of course, it was by then too late for stakeholders to object to these changes, as the rule had been finalized.

For three years, the changes to 22 CFR §123.17 as they pertained to temporary firearm and ammunition exports appeared to be ignored and unenforced by the federal government. Then, in 2015, U.S. Immigration and Customs Enforcement (ICE) and U.S. Customs and Border Protection (CBP) suddenly changed their websites to indicate the AES filing requirements would be enforced against travelers temporarily exporting firearms and ammunition, with penalties that could include seizure of improperly declared items and criminal prosecution.⁹

⁹ See NRA-ILA, “Rule Change May Devastate International Travel for Hunters and Shooters,” <https://www.nra-ila.org/articles/20150320/rule-change-may-devastate-international-travel-for-hunters-and-shooters> (March 20, 2015).

B. The AES was not designed for use by private persons for non-business purposes.

The AES was designed around the needs of commercial exporters and government officials, not private travelers. As CBP's "Introduction" to the AES states:

During AES development, a Trade Resource Group convened regularly. To ensure that all voices were heard, the group was comprised of large and small exporters, carriers, freight forwarders, port authorities, and non-vessel operating common carriers (NVOCC). At the trade's request, separate coalitions for exporters and software vendors were formed.^[10]

It continues, "Whatever aspect of the export community you represent - exporter, carrier, freight forwarder, port authority, service center, non-vessel operating common carrier, consolidator - AES has advantages for you."¹¹ Nowhere does this summary recognize that private individuals would also have to navigate a system designed by and for industry compliance specialists.

Individuals attempting to use the AES will need to have compatible hardware and software systems or to enlist the services of an authorized agent. Those who do not wish to purchase or write their own software, or hire someone to complete the filing process for them, have the option of using AESDirect, an online version administered by the U.S. Census Bureau.

That agency, in turn, has a webpage with various resources to acquaint users with the intricacies of the system.¹² Browsers can start, for example, with the 39-page *AESDirect User Guide*¹³ or with any of the one-hour-plus webinars that cover various aspects of the system.

Navigating the filing process requires individuals to create an account and then fill in data fields with various codes that are neither intuitive nor easily reconcilable with the context of an individual traveling with his or her own private property. For example, the system requires the parties to an export to be identified, with required fields that include the U.S. Principal Party in Interest, which must be identified by "Company Name" and an acceptable ID type. Likewise, the Ultimate Consignee also must be specified, again with reference to "Company Name" and an authorized form of identification.

Nowhere does the User Guide or the screens of the system itself explain how these categories are supposed to translate for private individuals declaring temporary exports of their

¹² U.S. Census Bureau, "ACE AESDirect – Resources," https://www.census.gov/foreign-trade/aes/aesdirect/transitiontoace.html?eml=gd&utm_medium=email&utm_source=govdelivery (last visited July 6, 2018).

¹³ Available at <https://www.census.gov/foreign-trade/aes/aesdirect/AESDirect-User-Guide.pdf> (last visited July 6, 2018).

own property. Such persons are not just an afterthought in the system's design. Rather, it appears that the design has not thought of them at all.

The acceptable forms of identification, for example, are an Employer Identification Number (EIN), a Dun and Bradstreet Number, or a foreign passport number (if the foreign entity is in the U.S. at the time the goods are purchased or obtained for export). U.S. individuals making temporary exports cannot use their own passport numbers, nor can they use their Social Security numbers.¹⁴

Using AESDirect, moreover, requires an individual to apply for an account with the Secure Data Portal of the Automated Commercial Environment. The application for an ACE Exporter Account¹⁵ requires users to list "Corporate Information," including an EIN and Company Name.

The Internal Revenue Service (IRS) is responsible for issuing EINs. The IRS website that explains the process for applying online clearly states: "Employer Identification Numbers are issued for the purpose of tax administration and are not intended for participation in any other activities."¹⁶ The online application requires the applicant to identify the "legal structure" associated with the EIN. None of the available options corresponds with a private individual who simply wishes to make an AES filing. The applicant then must specify why he or she is requesting an EIN, with the limited menu choices again offering no option for the private AES filer. Finally, the applicant must certify under penalties of perjury that he or she has "examined this application, and to the best of my knowledge and belief, it is true, correct, and complete."¹⁷

Private individuals using the online application form, in other words, must make a false certification to the IRS about their business need for an EIN as a prerequisite to complying with the legally-mandated AES filing requirement. These individuals are also potentially creating an expectation with the IRS that they are creating a business that should have associated tax filings.

C. The relevant agencies have been aware of the problems private individuals have using the AES, and there has been no apparent progress in resolving them.

In 2015, representatives of the NRA – as well as representatives of hunting and firearm industry associations – met with officials from CBP, the Census Bureau, the Department of

¹⁶ IRS, "Apply for an Employer Identification Number (EIN) Online," <https://www.irs.gov/businesses/small-businesses-self-employed/apply-for-an-employer-identification-number-ein-online> (last visited July 6, 2018).

¹⁷ See IRS Form SS-4, available at <https://www.irs.gov/pub/irs-pdf/sss4.pdf> (last visited July 6, 2018). Note the PDF of the SS-4 has options for "Other (specify)" not available on the IRS's online application form. It does not, however, indicate that EINs may be obtained solely for AES filing purposes.

Homeland Security (DHS), and ICE to discuss the above problems.¹⁸ These discussions emphasized the need for a simple, straightforward, and legal means for private travelers to comply with their AES filing requirements. The discussions also touched on concerns about creating a federal firearm registry via AES filings (a topic that is explored below in greater depth).

Shortly after that meeting, and after additional intervention from members of Congress, CBP announced that it would return to the status quo practice of using the paper CBP Form 4457 to track firearms for temporary export.¹⁹ In this procedure, travelers report to a CBP office during their trip or beforehand at a Port of Entry and present the firearms (and ammunition, if applicable) to be recorded on the 4457. Upon return to the U.S., the traveler will declare the property, which can be checked, if necessary, against the 4457 to ensure the same firearms that left the country have returned. The ATF has also indicated that this procedure will satisfy the re-importation of firearms under its importation jurisdiction.²⁰

We understand that this remains the procedure for temporary firearm exports by private travelers to the present day and that the AES filing requirement is not being enforced against these individuals.

Between 2015 and the present, NRA representatives have had repeated contacts with officials from CBP and the Census Bureau to inquire about any changes or updates to the above-described state of affairs. To date, we have neither seen nor heard of any evidence that the AES system has been in any way modified to alleviate the problems it presents for private travelers. Our review of the applicable websites during the preparation of these comments confirms this impression. The AES remains a complex application geared toward the needs of industry and government, not private persons traveling with their own property for non-business purposes.

D. BIS should omit the AES filing requirement for private persons temporarily exporting their own firearms and ammunition for lawful purposes and codify the Form 4457 procedure.

The NRA is pleased to see that BIS' current proposal is handling the AES issue in a much more transparent and forthright manner than the 2012 DDTC rulemaking that introduced it in the first place. The background information included with the proposal acknowledges:

BIS is aware that U.S. Customs and Border Protection (CBP) has temporarily suspended the requirement to file EEI to the AES for personally-owned firearms and ammunition that are "subject to the ITAR" being exported under 22 CFR 123.17(c), due to

¹⁸ See NRA-ILA, "You Can't Get There from Here: Obama Administration Shrugs Off Woes of International Travelers," <https://www.nra.org/articles/20150417/you-cant-get-there-from-here-obama-administration-shrugs-off-woes-of-international-travelers> (April 17, 2015).

¹⁹ See, e.g., P.J. Reilly, "U.S. Government withdraws confusing new gun rules for traveling hunters," LancasterOnline, April 27, 2015, https://lancasteronline.com/news/local/u-s-government-withdraws-confusing-new-gun-rules-for-traveling/article_e2991fcc-eeec-11e4-8c21-3b622f277d23.html.

²⁰ See 27 C.F.R. § 478.115(a).

operational challenges related to implementation. ... Whether and how BIS includes this requirement in a final rule would be based on whether CBP is able to update its processes, and other agencies as needed, to allow for individuals to easily file EEI in AES by the time a final rule is published. If CBP is not able to do so, then the final rule may direct exporters to continue to use CBP's existing process, which is the use of the CBP Certification of Registration Form 4457, until a workable solution is developed or CBP suggests an alternative simplified solution for gathering such information for temporary exports of personally-owned firearms and ammunition.

As explained above, the CBP and the other relevant agencies have not updated their processes to allow for individuals to easily file Electronic Export Information in the AES. Given that they are aware of the issues, have had more than three years to fix them, and have made no discernable progress in that direction, there is no reason to believe they will do so by the time the proposal is published as a final rule.

The NRA is unaware of any compelling security need to change the status quo. The very fact that the systems have not been updated to address the outstanding issues would seem to indicate CBP and DHS agree. Simply put, there has been no urgency to facilitate AES filings by private travelers. The Form 4457 procedure has proven to be a workable system both before and since the 2012 rule change, and it can continue to suffice for the near term.

The paper Form 4457 also serves an important function for some U.S. travelers to foreign countries that require a valid "firearm license" from visitors' home countries. Neither the U.S. government nor most U.S. states generally license the acquisition or simple possession of firearms, especially long guns. But foreign officials in these countries have historically accepted the Form 4457 as fulfilling this requirement.

It is also relevant that BIS has throughout the relevant time period always allowed for the temporary export of shotguns and shotgun shells under its jurisdiction via the baggage exemption of 15 C.F.R. § 740.14 without requiring a declaration to be filed in the AES. Indeed, that exemption currently does not specifically require the use of the Form 4457 procedure, either. Codifying the Form 4457 procedure would therefore help promote consistency and understanding across the different agencies involved in enforcing the nation's export rules and with the traveling public. The president's determination that certain additional firearms and ammunition no longer warrant control under the USML more strongly argues in favor of BIS adopting its own procedures for their temporary export than for importing procedures from the ITAR into the EAR.

CBP can also issue its own rulemaking on procedures for temporary exports by private travelers, should the state of play change with respect to the practical and technological issues of the AES. The issue could then be fully vetted in its own right. There is no reason, however, to inject this thorny issue into the larger project of Export Reform. It is not necessary nor helpful to the objectives of Export Reform, and it would perpetuate a problem one solution to which has already been identified (i.e., the paper Form 4457 procedure).

- E. Private travelers exporting a personal firearm they temporarily imported into the U.S. for lawful purposes should not be required to use AES for this purpose.

The same problems that arise from requiring U.S. persons to file declarations through the AES to take advantage of the BAG exemption apply to requiring foreign visitors traveling to the U.S. with their own firearms to use the AES to avail themselves of the TMP exception. This is not necessary under the current version of 15 C.F.R. § 740.9, and it should not be added to that section or to § 758.1.

Currently, foreign visitors traveling to the U.S. with their own firearms must apply for an import permit from the Bureau of Alcohol, Tobacco, Firearms & Explosives using ATF Form 6NIA. The individual will also have to substantiate his or her eligibility to possess a firearm in the United States as a non-U.S. person (for example, by obtaining a hunting license from a U.S. state). The travelers must then declare their firearms at the border, provide CBP officials with any required documents, and maintain the required documents during the duration of their stay. Customs officials in the country of re-importation can use the ATF Form 6NIA to confirm that the individual is returning with the same firearms that were brought to the U.S.

We are unaware of any attempt on DDTC's part to enforce a requirement that foreign visitors (including from Canada) declare the "export" of firearms they temporary brought to the U.S. for lawful purposes through the AES when the visitor returns home. Indeed, it is difficult to understand how doing so would contribute to national security. Thanks the Second Amendment and America's unique commitment to individual liberty, the U.S. has by far the largest civilian stock of firearms in the world.²¹ Given the ready availability of firearms in the U.S. as compared to the rest of the world, there is little chance that America's interests are seriously threatened by foreign visitors bringing their own lawfully obtained guns into the country. At the very least, they are not threatened enough to impose a bureaucratic requirement for private foreign travelers that has already proven unworkable for their U.S. counterparts.

For these reasons, we urge BIS to omit from §§ 740.2 and 758. 10 the AES declaration requirement as applied to private foreign travelers temporarily bringing personal firearms into the U.S. Foreign hunters and competitive shooters help contribute to the U.S. economy, and these proposed changes would discourage them from doing so. Meanwhile, reports of foreign travelers committing crimes in the U.S. with firearms they lawfully brought with them are vanishingly rare.

II. The expanded data elements necessary for AES filings exacerbate the problems for private travelers forced to use the system and violate the spirit of Congressional prohibitions against federal firearm registries.

The proposal would "expand the data elements required as part of an AES filing for [firearms transferred from the USML] to include serial numbers, make, model and caliber," including for those wishing to use the BAG and TMP exemptions. This makes the previously mentioned problems with AES filing that much worse. It also runs counter to the spirit of clearly

²¹ Lederer, *supra* note 2.

established Congressional policy against using bureaucratic record-keeping requirements to establish firearms registries.

Firearm registries have long been anathema to gun owners as a tool that can be used to target them for discrimination and for the eventual seizure of their firearms. History is rife with examples of tyrants who used civilian disarmament to further their despotic ends,²² and America's own Revolutionary War began in earnest after a British raid on Colonial arms caches. Against this backdrop, federal gun control laws have consistently maintained a policy against national registries of the sorts of common arms with which Americans typically exercise their Second Amendment rights.²³

Congress, in enacting the Gun Control Act of 1968 (GCA), specifically declined to create a federal firearm registry, despite the urging of President Lyndon B. Johnson to do so.²⁴ Both the House and the Senate voted down proposals to require registration of guns as the legislation made its way through Congress.²⁵ As Sen. James McClure later stated,

The central compromise of the Gun Control Act of 1968—the sine qua non for the entry of the Federal Government into any form of firearms regulation was this: Records concerning gun ownership would be maintained by dealers, not by the Federal Government and not by State and local governments.^[26]

Congress then amended the GCA in 1986 to prohibit any rule or regulation enacted under its auspices from using the records that federal firearm licensees must keep to establish “any system of registration of firearms, firearms owners, or firearms transactions or dispositions”²⁷

When the Brady Handgun Violence Protection Act of 1993²⁸ created the authority for the National Instant Criminal Background Check System (NICS), Congress took pains to ensure the system would not circumvent the GCA's policy against firearm registration. The Act states that if the NICS determines receipt of a firearm would not be in violation of law, it shall “destroy all records of the system with respect to the call (other than the identifying number and the date the

²² See, e.g., STEPHEN HALBROOK, GUN CONTROL IN THE THIRD REICH, DISARMING THE JEWS AND “ENEMIES OF THE STATE” (Independent Inst. 2013).

²³ The National Firearms Act, 26 U.S.C. §§ 5801-5872, requires federal registration of limited categories of arms, but to the extent it covers firearms, those guns— which include machineguns, short-barreled shotguns, short-barreled rifles, and non-sporting firearms greater than .50 caliber — are comparatively rare among the U.S. civilian firearm stock.

²⁴ See Lyndon B. Johnson, “Remarks Upon Signing the Gun Control Act of 1968,” Oct. 22, 1968, available at <http://www.presidency.ucsb.edu/ws/?pid=29197> (last visited July 6, 2018).

²⁵ 114 Cong. Rec. H22267 (daily ed. July 19, 1968); 114 Cong. Rec. S27420-421 (daily ed. Sept. 18, 1968).

²⁶ 131 Cong. Rec. S9163-64 (July 9, 1985).

²⁷ 18 U.S.C. § 926(a).

²⁸ Pub. L. No. 103-159, 107 Stat. 1536 (1993).

number was assigned) and all records of the system relating to the person or the transfer.”²⁹ Section 103(i) of the Act contains additional prohibitions against the use of the system to create a federal firearms registry:

No department, agency, officer, or employee of the United States may—

(1) require that any record or portion thereof generated by the system established under this section may be recorded at or transferred to a facility owned, managed, or controlled by the United States or any State or political subdivision thereof; or

(2) use the system established under this section to establish any system for the registration of firearms, firearm owners, or firearm transactions or dispositions except with respect to person, prohibited by section 922 (g) or (n) of title 18, United States Code State law, from receiving a firearm.”^{30]}

Beginning in 1979, the annual appropriations bills that funded the ATF and its predecessor agency prohibited the Department of Justice from centralizing the records of federal firearm licensees (FFLs), until the prohibition was made permanent in 2011.³¹ Also made permanent in that 2011 appropriations bill was another rider that prohibited the ATF from compiling a searchable registry of gun buyers’ names from business records transferred to the agency by FFLs who ceased doing business.³² A third provision in the same bill permanently created a 24-hour deadline for the destruction of identifying information on those who successfully undergo a NICS check.³³

Even Obamacare contains a number of provisions that prohibit information collected under its authority from being used to create firearm registries.³⁴

Meanwhile, there is no express authority in the enabling act under which this rulemaking is promulgated for BIS to collect and retain detailed information on the firearms owned by law-abiding Americans. Yet BIS is proposing to compel Americans to enter identifying information about themselves and their firearms into a federal database as a precondition of engaging in lawful travel with firearms. Individuals forced to comply with this requirement are given no assurances about how the information will be retained or protected or whether it will be available to other entities, and if so, under what circumstances. This clearly runs contrary to the spirit of congressional policy governing the handling of firearm owner information.

²⁹ 18 U.S.C. 922(t)(2)(C).

³⁰ 107 Stat. at 1542.

³¹ Consolidated and Further Continuing Appropriations Act, 2012, Pub. L. No. 112-55, 125 Stat. 552, 609 (2011).

³² 125 Stat. 552, 610.

³³ *Id.* at 632.

³⁴ Patient Protection and Affordable Care Act, Pub. L. No. 111-148, 124 Stat. 119, 884-5 (2010).

The *de facto* federal firearm registry that would be created by forcing private gun owners to make detailed declarations about themselves and their firearms via the AES is another argument in favor of retaining the current procedure utilizing the paper Form 4457. That procedure vindicates the government's legitimate interest in monitoring the firearms that move in and out of the country but does not require the government to maintain a central registry of firearm owner information.

Going forward, any further attempt to automate the information private travelers must provide about their personal firearms should include express privacy provisions. At a minimum, these should prevent the dissemination or transfer of the information to other entities and require its complete destruction once CBP has verified that the firearms which were temporarily exported have been returned to the U.S.

For all these reasons, the NRA objects to the proposal's use of expanded data elements for private travelers seeking to utilize the BAG or TMP exceptions and urges that those requirements be omitted from the final rule.

III. The Final Rule Should Take Effect Immediately to the Extent Requirements Are Eliminated and Phase in Other Changes to Allow Regulated Entities Time to Adapt.

When the final rule governing Categories I, II, and III of the USML is published, certain changes should take effect immediately, while others should be phased in to allow regulated entities time to adapt.

Changes that merely eliminate requirements altogether should take effect immediately. For example, there is no justification for continuing to make "manufacturers" of articles that would be moved off the USML register with the Department of State.

On the other hand, where control of an item changes from the USML to the CCL, necessitating new procedures by the regulated entity, implementation of the final rule's effective date should be delayed to allow for new compliance systems to be established.

Licenses already granted under the ITAR should also be grandfathered for all outstanding transactions.

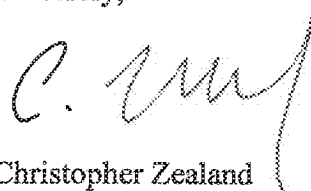

The NRA does not have any specific recommendations for a timeline of implementation for enforcing new requirements and procedures. We will defer to the entities whose day-to-day operations will be directly affected by the changes in the final rule.

Conclusion

The NRA is very pleased to see Export Reform finally turn its attention to Categories I, II, and III of the USML. The proposal charts a positive course that will contribute to national security, enhance the competitiveness of U.S. businesses, and benefit ordinary gun owners by mitigating the potential for export regulations to burden innocent conduct that does not implicate national security. We hope you will take the suggestions offered herein seriously to further promote the worthy goals of this effort, and we appreciate the opportunity to provide input.

We have also included our submission on the Directorate of Defense Trade Control's companion rulemaking and incorporate those comments herein by this reference.

Sincerely,

A handwritten signature in black ink, appearing to read "C. Zealand", with a long, sweeping vertical line extending downwards from the end of the signature.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

U.S. firearms exported to Mexican police have been used in massacres and forced disappearances. We need international background checks to prevent gun exports to military and private groups that use them to commit violence or collude with organized crime.

At the core of these proposed changes is the mistaken belief that firearms do not merit tighter control because they are neither high-tech nor provide unique military advantages. In reality, these are some of the weapons most often used to commit abuses and extend conflict around the world. As such they deserve our highest scrutiny, not an easier path for sale and one without Congressional oversight. The policy continues the wrong-minded approach of the Trump administration to treat weapons as any other trade commodity, threatening to undermine long-term global security and true U.S. national security interests.

"The Trump administration's decision to relax regulations on the export of firearms will make it easier for terrorists, tyrants and criminal gangs to get their hands on the same dangerous firearms that have been used in mass shootings in the United States. This is a victory for the NRA and the gun industry and a loss for everyone else. Relaxing regulations on many firearms by putting them under the jurisdiction of the Commerce Department rather than the Department of State will make it harder to track where these weapons end up, and therefore easier for them to be diverted into the wrong hands. To make matters worse, Congress would no longer even be notified of major firearms exports, making it harder to do things like limit sales to the police in the Philippines who have been involved in assassinations of their own citizens -- as Sen. Ben Cardin, who blocked such sales in the past, has noted.

O, let America be America again --
The land that never has been yet --
And yet must be -- the land where every [one] is free.
Langston Hughes, Let America Be America Again

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting

made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Thank you for taking action to help make our country and our world a safer place.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military yet semi-automatic rifles are used in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns as well as any larger caliber firearm. Six U.S. states, DC, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by Congress to regulate the export of arms as the rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons which will limit its ability to comment on related human rights concerns, as it recently did on Philippines and Turkey. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017 letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. The government taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking which will make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls for gun exports and would eliminate the State Departments

Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale but the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

I generally oppose regs that would make it easier to export guns from the US so I oppose any changes to current rules and regs.

Ex, Congress no longer being notified about large weapons sales is not acceptable.

The changes would present fewer obstacles for crime organizations to purchase large caches of weapons. Removing liscensing requirements is also a problem in my opinion.

None of the rule changes are acceptable and I urge you to oppose them.

Thank you

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

As a pediatrician, parent, and grandparent, I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in, increased health costs, environmental degradation, & lives..

General Comment

I oppose the transfer gun export licensing from an agency (State Department) with a mission to promote stability, conflict reduction, and human rights, to an agency (Commerce Department) with a mission to promote trade and which lacks the resources to adequately enforce export controls. The propose agency is to promote commerce in this case -- weapons. There is enough conflict in the world; there is no need for more weapons.

The proposed rule change:

- * Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- * Eliminates Congressional oversight for important gun export deals.
- * Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- * Removes statutory license requirements for brokers, increasing risk of trafficking.
- * Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- * Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- * The Commerce Department does not have the resources to enforce export controls, even now.
- * Reduces transparency and reporting on gun exports.
- * Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Switching the regulation of firearms would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Please make sure that the proposed rule change DOES NOT:

Treat semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminate Congressional oversight for important gun export deals.

Transfer the cost of processing licenses from gun manufacturers to taxpayers.

Remove statutory license requirements for brokers, increasing risk of trafficking.

Reduce or eliminate end-use controls, such as State Depts Blue Lantern program, or eliminates registration of firearms exporters.

Enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Give the Commerce Department the responsibility to enforce export controls over semi-automatic assault rifles.

Reduce transparency and reporting on gun exports.

Transfer gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. Military style weapons like the AR 15 belong in the hands of US Military personel, not private citizens and not terrorists and crimals abroad.

This is yet another move that puts the profits of the US gun industry ahead of the US people and the people world wide. I thought Presiden Trump was going to drain the swamp rather than relocate it to his administration.

General Comment

If this proposed rule reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and eliminates registration of firearms exporters, a requirement since the 1940s, we will contribute to instability and threats to safety in other countries. That will only add to the need for immigrants and those seeking asylum in our country to flee their dangerous situations. Increasing the risk of arms trafficking is never in our best interests nor those of countries to which we export.

General Comment

This new rule would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international terrorists and criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of the gun industry. I am appalled at this administrations capitulation to the gun lobby which is now turning to the international market as gun sales decline in the US. I am concerned that the proposed rule does not adequately address our national security, foreign policy, international crime and terrorist threats. Congress and the public must be able to understand the impact of these rules on potential firearm exports. The proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

We shouldn't have assault style weapons available to individuals at home or abroad as they were designed as weapons of war, and as such should be restricted to military use. Why facilitate deranged parties acts of mass murder whether it be at home ore elsewhere?

I oppose the proposed change of export licencies from the State Department to the Commerce Department. This transfer includes assault weapons and other powerful firearms and will make it easier to export U.S. guns and ammunition globally. These exported firearms are already being used in crimes, attacks and human rights violations in many other nations.

A change to the Commerce Department will increase the number of export applicants by 10,000 annually, according to the Dept. of Commerce estimates. This change will only benefit the arms business, and cause many more deaths and destruction worldwide.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Our country is flooded with weapons already and now we want to flood the world with even more. Obviously this is about profit for the weapons industry and does nothing but make our already dangerous world more dangerous. This rule change is unacceptable and I expect someone there knows it.

Dear sir

I am writing to oppose the proposed changes to the regulation of domestic Firearm sales to foreign purchasers. The United States has supplied weapons to foreign groups in the past only to have those same weapons used against our own military personnel. Mistakes were made in the past but I would rather arms sales were regulated by the State Department whose aim is to protect the safety of our nation. The Commerce Department has a goal of increasing our sales and isn't tasked with determining whether those sales constitute a future danger to our country.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

I am disgusted that the United States seems to be determined to share its gun problem with the rest of the world! I am strongly opposed to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rule's elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one else asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobby's influence in the rule's description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my power peacefully and democratically to hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The public needs MORE information not less about firearms both domestically and internationally.

The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I think the level of criminality in Central America and Mexico has been partially enabled by guns from the USA ending up in gangs and drug cartels. This has also encouraged the surge in Asylum seekers. Lets not make gun sales easier.

I join all those Americans who ask you to reject this proposed rule.

This proposal would make it easier to export U.S. guns and ammunition globally, even though U.S.-exported firearms are already used in many crimes, attacks and human rights violations in many other nations.

There are many problems with this proposal, including it:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

PLEASE REJECT THIS PROPOSAL!

General Comment

I am a retired social worker, mother of three and active voter and community member. I am all too aware of the devastation that gun violence has exacted on our communities here in the US. I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

Can we please be a model for the world to look to on matters of peace and justice, beginning with our policies on gun exports:

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

The State Department should continue to control firearms.

Firearms are classified as "military" for a good reason, and their regulation is much more appropriate under the State Department than the Department of Commerce.

Firearms are in need of much more regulation that they are currently, and that regulation should remain under the State Department.

The Commerce Department does not have the resources adequately to enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Firearm exports should continue to be regulated by the State Department. There is a compelling reason they are, and have long been, regulated by State.

General Comment

I am a parent, educator, retiree and my wife and I oppose the proposed rule for the following reasons: The proposed rule treats semi-automatic assault rifles as non-military. But many groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, DC, and several large retail chains also prohibit retail sale of semi-automatic assault rifles.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. Senators have explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. Taxpayers will absorb the cost of reviewing applications and processing licenses.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

The rule reduces controls for gun exports. It would eliminate the State Departments Blue Lantern

program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Government's information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.

Thank you.

General Comment

I respectfully request that this proposed rule change be defeated. Among the reasons are that it

1. Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
2. Eliminates Congressional oversight for important gun export deals.
3. Transfers the cost of processing licenses from gun manufacturers to taxpayers.
4. Removes statutory license requirements for brokers, increasing risk of trafficking.
5. Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
6. Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
7. The Commerce Department does not have the resources to enforce export controls, even now.
8. Reduces transparency and reporting on gun exports.
9. Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Points 1 and 9 above are especially compelling. We definitely should not export our gun violence problems to the rest of the world.

This country cannot even control what is going on here with our homegrown terrorists & these guns, especially the weapons used by our military & designed for our military like the AR-15. The President appeases the gun lobby with these ideas, but that is just a fraction of the population & only serves his political purposes. We need to get our house in order. Contrary to Mr. Trump's opinion the United States does not need to be like Russia. He wouldn't even need to come up with schemes like this for trade, had he not alienated our closest allies like Canada who we had a trade deficit with, they spent more money here than we did there. I'm praying that someone who works in this government now & has control, uses common sense in this case & acts responsibly.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world as this is how they make money. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

With the proposed rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns. Moreover, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. Thus, firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Additionally, the rule change would make the world a more dangerous place for the following reasons: It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

In summary, firearms are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

The problem with indiscriminately arming nations is like the weather: If you like a current regime, wait a decade or two and it will change--often to one opposed to the United States. Accordingly, the decision whether to arm a regime is better assessed by the State Department than the Commerce Department, whose emphasis is promoting trade. The proposed rule is short-sighted and should be rejected.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

- by eliminating the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- by removing licensing requirements for brokers, increasing the risk of trafficking.
- by removing the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please leave the regulation of firearms exports under the jurisdiction of the State Department.

Thank you.

I want to make these points about the proposed rule:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

I am opposed to moving the authority to regulate export of firearms from the State Department to the Commerce Department. I think the State Department is better equipped to review proposals to ship exports of firearms and is in a better position to block such exports to rogue countries where they could be used by the authorities to stifle people's right to protest against the government. We need to be very careful of whom we export dangerous firearms to and the State Department is better equipped to do that.

General Comment

I oppose the NRA-proposed rule change to move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department.

The State Depts mission is to safeguard our nation; the Dept of Commerces mission is to promote American business.

Firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Additional threatening effects of the rule change:

1. It will eliminate the State Departments Blue Lantern program, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them;
2. It will remove licensing requirements for brokers, increasing the risk of trafficking;
3. It will remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe.

PLEASE DO NOT LET THIS RULE CHANGE TAKE EFFECT. Our national security is more important than the profits of gun manufacturers.

General Comment

This seems like a particularly bad idea to me. These firearms are not only for the hunting enthusiast and hobbyist, but are used as weapons of conflict across the world. That would be the purview of the State Department, not the Commerce Dept. I respect the right of American citizens to own guns, but I do not want to provide the gun industry any greater latitude in their lucrative business of selling weapons around the world.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

As a taxpaying, American citizen I am vehemently opposed to this proposed rule change to move the handling of export licenses of semi-automatic assault-type weapons and other powerful firearms to the US Commerce Department.

This is foolhardy and clearly not in the interests of national security. Such a move would mean Congress would not be automatically informed of the sale of large caches of firearms to foreign countries. No prudent person would think giving private arms companies the go-ahead to sell dangerous weapons overseas without proper vetting is a good idea.

Largely unregulated arms sales could endanger our national interests and security. Lack of oversight would permit arms sales to anyone, including our enemies. Furthermore, why would we want to threaten world stability and undermine our own global diplomacy as well as that of our allies?

I think that trail leads to the National Rifle Association and its lobbyists. This transfer of authority must not be approved; to do so, is to embrace an unethical and inhumane practice which will only smear our international reputation and harm our diplomatic efforts for peace. Please retain administration of export licenses with the State Department. Peace over profits.

he bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This is a matter of national security and should be treated as such by remaining under the control of the US State Department.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Extensive trafficking in firearms contributes to violence around the globe. The world is awash in firearms, particularly military style weapons. Many weapons end up in the hands of pirates, terrorists, criminals and poachers. Wildlife poaching is a major cause of loss of wildlife. We do not need to make it easier to transport firearms around the world. We should be making it more difficult.

Firearms exports are increasing the danger that people and animals face around the planet. We need to work to actively reduce the amount of firearms not make it easier to export them.

I oppose this proposal for all the following reasons as well as those I have outlined above.

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic

assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control.

General Comment

I strongly oppose moving oversight of firearm export licensing from the Department of State to the Department of Commerce.

The proposed rule change treats semiautomatic weapons as "non-military," which is absurd. Moreover, the proposed rule eliminates Congressional oversight of gun export deals, transfers the cost of processing licenses from gun manufacturers to tax payers, and enables unchecked gun production in the U.S. and exports abroad by removing the block of 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I am writing in response to the proposed policy to make it easier to export U.S. guns and ammunition globally and the move of export licensing from the State Department to the Commerce Department. We do not need to make it easier to export guns. There are enough in the world. The only reason for this proposed changes is to benefit the gun lobby. Here are other reasons why this should not happen:

- It treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- It eliminates Congressional oversight for important gun export deals.
- It transfers the cost of processing licenses from gun manufacturers to taxpayers.
- It removes statutory license requirements for brokers, increasing risk of trafficking.
- It enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- It reduces transparency and reporting on gun exports.
- It transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

All of these reasons make this policy change ridiculous and terrifying. Please please do not allow this policy to go through. We have enough gun violence all over the world. Why create an even easier path to gun violence and human rights violations?

Thank you,
Meredith Roach

I OPPOSE the proposal. It would make America LESS SAFE. The proposal weakens controls over semiautomatic assault weapons including AR-15s and AK-47s, 50 caliber sniper rifles, and high-capacity ammunition magazines. It may also deregulate 3D printing of guns and could ultimately weaken controls on firearm imports. The proposed transfer will likely lead to more U.S. guns getting into the hands of criminal organizations, human rights abusers, and terrorist groups. The proposed rules are a priority for the National Rifle Association and the National Shooting Sports Foundation (the official trade association for the firearms industry) who want to open up international markets to compensate for lagging domestic gun sales.

I am writing to voice my strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms more dangerous by transferring controls to an agency that prioritizes business interests over national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also concerning. This rule seems designed to create profits for the U.S. gun industry. The rules description of semiautomatic assault rifles like the AR-15 as civilian products is also concerning. These weapons were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. Please do not go forward with this dangerous policy.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Arms sales need to be carefully regulated so we do not sell weapons to terrorists and others who pose threats to our national security. The US Commerce Department does not have the resources for this and will undoubtedly favor sales over security.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I am speaking out against the proposed policy of exporting ammunition and guns globally from the United States. We have a culture of war. Providing weapons to facilitate the ease of war is not in anyone's best interest. The proposed rule changes do the following, and are of grave concern:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

This is a dangerous proposal and should be squashed immediately.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

General Comment

I am opposed to the Trump administration proposed to make it easier to export U.S. guns and ammunition globally, even though U.S.- exported firearms are already used in many crimes, attacks and human rights violations in many other nations. These are the reasons that I am concerned:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

The Trump administration proposal applies to assault weapons and other powerful firearms, moving export licenses from the State Department to the Commerce Department. The U.S. gun lobby has advocated for these policies. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually. The fact that this proposal applies to assault weapons and other powerful firearms typically used in the military is concerning in that terrorist organizations may be able to easily get their hands on these weapons. We do not need to increase the potential use of weapons whether they are here or exported abroad. Thank you for your consideration of this serious matter.

I am writing in support of this proposal. The current ITAR regulations, as imposed upon gunsmiths, are stifling to business. The modern gunsmith will perform tasks such as barrel replacement, muzzle threading, and other tasks that do not make him a manufacturer by the common definition of the word, but subject him to manufacturer regulations and fees. The overwhelming majority of these small businesses operate on very thin margins as a general rule anyway, and most will never export a single product outside the US. To include common sporting rifles like the Remington 700 or even the semi-automatic AR15 under this regulations is simply ludicrous and needs to be changed. Ignore the comments in opposition, not one of them knows what they are talking about, they simply oppose this common sense measure because it will benefit 2nd Amendment advocates.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Hello,

If you're being mugged and you have a gun, would you hand it over to them? President Trump's proposal to lift the current regulations exports seems to be doing the same thing. I believe the the inherently military nature of these firearms means that the sale of them is an issue of national security. I feel very strongly that the gun export laws should stay as they are. Why would we make it easier for potential terrorists or international criminals to obtain lethal weapons?

Thank you for your time.

I am opposed to this rule change because:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do everything you can to stop this proposed rule change.

Thank you.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The proposed changes in the rule regarding international arms regulations are RECKLESS. Lives around the world will be endangered by international and domestic criminals. It boggles the mind that an American administration can be so blind to the effect of these changes on the freedom of the traveling public to go anywhere without fear of gun violence; on the freedom of Americans to go about their business in their own country; and on the general safety of the world at large.

Please do not change these rules so drastically. They've been in place since 1940; they still work. You are hurting us, your constituents, whom you promised and swore an oath to protect against all enemies, foreign and domestic. These rule changes violate that oath on every ground.

I oppose this proposed rule for the following reasons, and for my belief that will make our world even for violent. Congress is shirking their responsibility in protecting the American people.

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I am concerned that this proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Everything Ive heard from this administration is that they want to protect citizens from terrorists and that focus has been on immigration. Ive also heard the NRA say they fully support keeping weapons out of the hands of dangerous people but this rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I strongly oppose this proposal to transfer the oversight of weapons export from the State Dept. to the Commerce Dept. The change is only for the benefit of the gun manufacturers to increase their profits and to weaken law enforcement over firearms trafficking to shady gun dealers. The security of civilian citizens here and abroad would be at risk for the following reasons.

The proposed change treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

General Comment

I adamantly oppose the proposed rule change because of its negative impact on both the domestic and international fronts.

The proposed rule would dramatically change the regulatory structure for firearm exports--in a way that makes it appears to be largely driven by the interests of industry.

It's complexity raises the concern that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. In addition, I am concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Specifically, these the rule changes that would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Deregulation of weapons sales allows the use of secondary purchases giving a path for military supplies to reach the terrorists we are trying to defeat.
This contributes to the never-ending war.

General Comment

I oppose.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

The Trump Administration has formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. I am concerned that the proposed rule does not adequately address our national security, international crime, or terrorist threats.

The administration should not move forward with the proposed rule, but should consider other alternatives to better balance the important interests at stake.

This is pure greed on display. The gun industry serves the purpose to kill. International sentiment seeks to reduce weapons of mass destruction even as the United States attempts to mass distribute guns. The quantities of guns being distributed for profit will eventually rival the same mass destruction as large weapons. This must be stopped.

General Comment

I am a citizen of the USA and resident of the state of Michigan.

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

More reasons exist to stop these unwise changes.

General Comment

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The Trump administration has proposed changes to the agreements affecting the sale of weapons abroad that I believe would make the world a more dangerous place. Please don't value commercial gain as more important than keeping all of us safe.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not dismantle important protections that have served us well and that we still need.

General Comment

To Whom It May Concern:

It would ask that you preserve the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. Eliminating these licensing requirements for brokers will increase the risk of illegal firearm trafficking.

Please also preserve the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The government's first job is to protect the people. Opening the door to the spreading of unlicensed firearms to whomever, wherever is inconsistent with the spirit of firearms laws and your obligation to protect the safety of the American people.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I am very OPPOSED to the proposed regulation to move the firearms exports from the State Department of Commerce.

The State Departments oversight and regulatory authority is critical to our countrys safety by monitoring weapons domestically and those coming into this country. Since most types of firearms can be used for military and terrorist activities and they should remain under the scrutiny of the Department of State for our protection rather than Department of Commerce for promoting export of our goods with little oversight.

If the regulatory rule is changed, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

Additionally, the Commerce Department just does not have the resources to adequately enforce export controls which means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The end result is firearms will be exported to anyone with money.

For the safety of the people of our country and the world, PLEASE DO NOT approve this move.

We know that gun violence spreads like a virus, from one person/family to another and across communities and states. Simply being close to a gun increases the chances that you will be harmed, domestic violence, suicide or accidentally. Gun violence is an epidemic in America, spreading like a wildfire in California. Please don't export this violence to other countries which would make gun violence a pandemic, like the deadly flu in 1918. It was not a disease that could be controlled. This violence will circle back through America ten-fold and may revisit it's deadly effect on you or your family.

As a physician, I stabilize patients using the ABCs first, Airway, Breathing, Circulation, the most necessary functions to keep one's body alive. Sometimes that means we don't treat the cause of their emergency first. We stabilize the airway so they can get air in, we ensure they can oxygenate effectively and then we make sure their heart is working and their blood pressure is adequate to perfuse the brain. Once we know those major organs are taken care of, we can begin to search for a cause. First, we have to buy ourselves time to work. We can continue to talk about the causes of gun violence but first we have to stop the gun deaths and stabilize the situation to give ourselves time to come up with reasonable plans. For now, stop spreading the gun violence by making more guns, transporting more guns and making it easier to get guns, even temporarily.

Ideally, if at least temporarily, HALT gun sales. There are more than enough guns on the market for people to sell to each other. Let's discuss this without all the rhetoric, without the NRA. Let's look at the science. Don't spread this epidemic. ABCs, stop the bleeding.

It is appalling to hear that our gov't wants to make selling weapons easier which will help the terrorists even more. It's a well known fact our gov't has created or emboldened terrorist organizations due to lack of foresight and/or corruption.

It is ludicrous to ease sale of weapons which will empower and strengthen terrorist organizations. Trump's plan is a terrible plan and must not proceed.

Im Nick Britten and Im for increased gun safety around the world. For that reason Im against this proposal. More specifically Im against this proposal because it does the following things:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

There should be no relaxation of laws and regulations around exporting or traveling with firearms. The United States has one of the worst rates of gun violence in the world and we should not allow that to flow over into other countries. Eased exports will only support terrorist organizations. Do not enable gun manufacturers to spread their business through terrorism.

General Comment

There are two major problems with this rule change moving the handling of export licenses of semiautomatic assault and other firearms from the U.S. State Department to the U.S. Commerce Department. First, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security. Second, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere.

This rule change would, therefore, make it much easier for firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous groups and organizations to obtain large caches of American guns and ammo with which to commit their horrendous crimes.

This rule change should not take place in the best interests of both American security and moral conscience.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted on line instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Submitter Information

Name: Ryan DeRouen

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain

rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies

I have the following concerns about the rule change. Specifically, it

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

None of these changes is beneficial to the broader public, in the US and abroad.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

First, we should not be exporting anything to any country where it is currently against the law to own or possess such an item. This action would undermine that country's right to their own sovereign rule. Second, we have become the leading nation in the world in gun deaths, and we do not want to export that disease to any other country in the world. Third, exporting these items will create enemies and the US at this point needs friends, not new enemies.

General Comment

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

General Comment

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

Good afternoon,

My name is Andres R. Quiroga, current resident of New York. Im writing to oppose this amendment based on the overwhelming amount of evidence we have on the horrific results American weapon exports have had around the world.

If moral grounds are not enough, please remember that we have directly armed terrorist organizations in the past, which resulted in loss of life of allies and American soldiers.

I know there are other plenty factually supported reasons not to, but human life has no cost, and those 2 should suffice.

Thank you

As a human rights advocate for the last decade and a half, I am writing to express my concern about, and voice my opposition to, the reclassification of semi-automatic weapons as commercial items.

Due to my extensive work on gross human rights abuses in sub-Saharan Africa, I understand the role the semi-automatic weapons play in increasing fatalities in areas of Africa affected by conflict.

For example, in the Democratic Republic of Congo, the large-scale presence of automatic and semi-automatic weapons increases the toll on civilians at the hands of armed actors inside and outside of government. According to the 2012 Amnesty International Report, "If You Resist, We Will Shoot You!" (available online at http://www.amnesty.eu/content/assets/ATT_DRC_report.pdf), members of the Congolese Republican Guard used AK-47 rifles to disperse a crowd of pro-democracy demonstrators in the capital city of Kinshasa in late 2011.

The use of semi-automatic weapons like the AK-47 in the dispersal of protesters led to the death of 12 opposition activists as a result of this excessive force.

As such, I strenuously oppose the any federal steps to make these weapons easier to export across national borders.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. Please note that I am a supporter of the Second Amendment and consider myself a rational moderate on the issue of guns. That being said, the proposed rule change eliminates necessary Congressional oversight for gun export, which stops an important check. I fear that we are placing the desires of the gun industry over the responsibilities of our Congressional leaders. I fear guns will proliferate and fall into the wrong hands. Mostly, I am disturbed that this action feels like it is taking place in secret, like so many changes lately, which seem to me to diminish the transparency and authority of the people to make wise, reasoned policy through their elected representatives. Please do not make this change.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays in the cost in lives.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are by design highly portable danger. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Their lethality should be subject to more controls, not fewer.

Thank you for helping to secure our country and world as a safer place.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

General Comment

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

Name: Alicia McClintock

General Comment

My name is Alicia McClintock and

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2]

Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that

firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. I hope this is taken seriously and not politicized.

General Comment

As a gun-owning taxpayer, I am very concerned about this proposed change in policy. I'm especially concerned that this change eliminates Congressional oversight for important gun export deals. It reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and eliminates registration of firearms exporters, a requirement since the 1940s.

The Commerce Department does not have the resources to enforce export controls, even now. It reduces transparency and reporting on gun exports. It transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade. This does not seem to be in humanity's or our country's best interests.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Please leave the regulation of firearm exports with the US State Department.

General Comment

I vehemently oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. International firearms sales must remain classified as "military" and therefore under regulation by the State Department, so that Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, or to countries where there are serious human rights concerns.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. This would create an unacceptable proliferation of firearms in the hands of dangerous groups. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Further, the rule change would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Given the issues with gun violence and the trump Administration's attitude against immigration, this rule change would make two extremely bad situations much worse.

I vehemently oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

There is more than enough bloodshed and personal and community devastation in the United States from these ghastly weapons - please don't be responsible for spreading the worst of who America is to the rest of the world. Do the right thing and think of something besides profits.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is too complex and driven by the interests of industry.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Here are details on how the rule change would make the world a far more dangerous place:

- 1 It would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Name: Amanda Wilcox

General Comment

My 19 year old daughter was killed in a rampage shooting in 2001, so I know full well the tragic toll of gun violence. I also know that Americas gun homicide rate is more than 25 times the average of other high-income countries.

An analysis of gun homicide rates in developed countries those considered high-income by the World Bank found that the United States accounted for 46 percent of the population but 82 percent of the gun deaths.

The current proposal by the Trump administration would it easier to export U.S. guns and ammunition globally. I strongly object to America arming the world, especially with assault weapons and other powerful firearms. The proposal would move export licenses from the State Department to the Commerce Department. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually.

I object to the proliferation of weapons used in war and crime in other countries. Specifically, I oppose the proposal for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

2. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue

Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

3. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

4. This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

5. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Thank you for considering my objections and concerns. I ask that this proposal be rejected.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

General Comment

Corporate profits from the sale of guns should never take priority over sensible gun laws and protection for the world's citizens. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! I strongly oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Do not eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. Do not remove licensing requirements for brokers, which increase the risk of trafficking. And do not remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Stand up for the safety of American citizens and citizens of the world. Do not switch the regulations of firearms export from the US State Department to the US Commerce Department. Thank you.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

Thank you for the opportunity to comment on the Proposed Rule: International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III.

I am a citizen and taxpayer extremely concerned about gun violence and national security, and feel strongly that the handling of export licenses of semiautomatic assault weapons and other powerful firearms should remain with the U.S. State Department rather than move to the U.S. Commerce Department, for the following reasons:

This rule would transfer gun export licensing to an agency whose principle mission is to promote trade. Both assault weapons and non-semi-automatic weapons are used in large numbers by criminals around the world. Their export should continue to be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The proposed rule would transfer the cost of processing licenses from gun manufacturers to us, the taxpayers. Registration fees that are used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So, we the taxpayers will absorb the cost of reviewing applications and processing licenses when it should remain a cost that gun exporters pay.

The rule reduces end-use controls for gun exports in several ways. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would eliminate registration of firearms exporters, which allows the State Department to check on an exporters history. Without use of this database, enforcement against arms trafficking will be seriously weakened. The Commerce Department does not compile information on human rights violations, so this rule would make it harder to deny weapons licenses to international human rights violators

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. Furthermore, Congressional oversight for important gun export deals would be eliminated. Congress will no longer be automatically informed about sizable sales of these weapons. This would violate Congressional intent and effectively eliminate Congress proper role.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

What is perhaps scariest is that the proposed rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Please do not make it easier to export U.S. guns and ammunition globally by moving export licenses of semiautomatic assault weapons and other powerful firearms, given that U.S.-exported firearms are already used in countless crimes, attacks and human rights violations in many nations. This seems to be a rule that would only benefit gun manufacturers, and that is just plain wrong.

I want all guns to be regulated just like cars. All have to take a mental stability test and use of firearm tests. All need to be insured and close all the loop holes at gun shows. No one should sell a gun with out a paper trail. The data base will be paid for by gun owners through their fees and this data base is live, all law enforcement and courts should see complete history from every state. No more guns in public places or schools. End open carry, no one needs to take a gun to the movies or to concerts.

I think this is a terrible idea.

The proposed rule would consider semi-auto assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Civilian trade does not need need assault rifles of any sort.

This rule removes Congressional oversight for important gun export deals, reduces transparency and reporting on gun exports (which increases the risk of trafficking along with the removal of of statutory license requirements), shifts the cost of processing licenses from gun manufacturers to taxpayers, gets rid of or decreases many existing gun control efforts, encourages 3D printing of firearms, and transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

It seems practically designed to make gun trafficking more likely, harder to control, and more of a problem than it already is without expanding the resources for any agency to combat all these clear downsides.

Here are my concerns about the change to these policies:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

Treating semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries is unconscionable.

Do NOT:

- eliminate Congressional oversight for important gun export deals;
- transfer the cost of processing licenses from gun manufacturers to taxpayers;
- remove statutory license requirements for brokers, increasing risk of trafficking;
- reduce or eliminate end-use controls, such as State Depts Blue Lantern program, nor eliminate the registration of firearms exporters -- a requirement since the 1940s;
- enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms

As you know, the U.S. Commerce Department does not have the resources to enforce export controls, even now, so do NOT reduce transparency and reporting on gun exports. DO NOT transfer gun export licensing from an agency with mission to promote stability, conflict reduction and human rights, to an agency with mission to promote trade, for God's sake!

General Comment

Maintain control of International Traffic in Arms Regulations with the State Department where it resides currently.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

This change would make the world a far more dangerous place for these reasons:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[

Easing restrictions on the export of firearms -- including types already banned in several U.S. states -- does a disservice to the U.S. and the world. The United States is already the #1 exporter of small arms and light weapons, many of which end up in the hands of drug cartels and militias from Bogot to Jakarta. These transfers are documented in detail by wide-ranging research, including the Small Arms Survey and the U.N. Office for Disarmament Affairs. We will only be shooting ourselves in the foot (pun intended) if we choose to give gun manufacturers more freedom to contribute to instability abroad. We will also be repeating the same travesty our government has condoned for decades: putting firearm industry profits over human lives.

I urge the Department to reconsider this and any other relaxation of existing restrictions on small arms exports.

I am submitting this comment in support of DOS-2017-0046 to remove many items from the USML and transfer them to regulation under Export Administration Regulations. It makes sense for American industry and it makes sense to allow the Dept of State to concentrate on regulating arms that are truly military in origin and impact.

Removing gunsmiths from the purview of ITAR is a good change.

Moreover, it will remove the State Department from the regulation of ideas such as the 3D printing instructions of Defense Distributed. That horse has left the barn years ago and further regulation will never get it back.

General Comment

After reviewing the proposed regulations under the Federal Register for the revision of Category 1, we have noticed some irregularities in the overall objective of the transition.

Industry has been told that the shift from USML to CCL would be beneficial for the following reasons.

1. No export fees
2. Less Documentation For Exports of Commercial Type products

The issues, which are not clearly addressed in the Federal Register, are listed below.

In the proposal on Page 24198, titled Revision of Category 1, the FR indicates that items, which are inherently military will continue to be controlled under the USML. One could argue that inherently military can be applicable to any modern firearm depending on the End Use of the defense article. An End User in country X for example can use a commercial product for military applications regardless of original design and manufacture of the product. What will be the determination for the split between USML and CCL for an inherently military firearm?

Secondly, is Category I(G). I(G) will continue to cover many parts for commercial firearms such as Bolt Carriers, Slides, and Sears, which can be interchangeably used by commercial and military firearms. If a commercial customer wants to order a semi-automatic rifle and parts, such as replacement bolt carrier group or a upper receiver, barrel etc., then the applicant has to file an application with Commerce and State Department. This is a huge cost on industry and major cost to Commerce and the State Department. Right now the applicant could just file one application with State Department. The proposal would force applicants to get two different sets of documentation from the Consignee and then submit two applications. The cost associated to submit an application has now doubled since manpower is required to submit two licenses, and the cost to the US Government has increased since two applications now need to be reviewed by two different organizations. What about firearms such as Glock, Sig Sauer or Beretta etc.? Who will cover the parts since the United States military has used these products in the past? Will third party aftermarket accessories be considered as inherently Military parts and require a

State Department license?

DDTC has certain threshold guidelines for case processing times. What is the current, and projected processing times for Commerce to process applications? It is not uncommon for Commerce to staff out cases back to State Department for Referral further adding to the total time for processing. There is little to benefit industry if the average processing time for a case takes longer than current DDTC performance.

In addition, presently DDTC will RWA a case with explanation if there are certain factors contained within the case that may jeopardize national security interests. This allows industry to take corrective measures. What will be the RWA measure with Commerce? One major benefit of having a case RWA with explanation is the case officer has acted as a subject matter expert to accurately decide if a defense article contains features that will not be allowed for export to a certain country or individual. This safety net limits the liability of the applicant. When a case officer can act as a secondary set of eyes, it always is in the benefit of the applicant.

In the proposal on page 24200 under Regulatory Analysis and Notices there is little to indicate if Commerce will implement fees at a later date for applications of export. Although there will be a cost savings to the State Department what will be the cost implications to Commerce? How will Commerce accommodate the influx of applications without charging a fee to hire new personnel? Specifically, on page 24201 the Department of Commerce indicates it is unable to estimate the increase in costs. How will this impact case applications and timelines?

Perhaps, State Department could adopt a sliding fee structure for organizations that do not export or export very little. Under the proposal most manufacturers will still have to register with State Department.

In summation, as the proposal stands, there is blurred lines between inherently military items, many applicants will need to file two export licenses for parts and firearms with Commerce and State, increase in processing times, liability, and potential fees later on. We support changes in making the process more efficient, more effective and giving US Companies more advantageous positions to be competitive internationally. Many companies will benefit but many companies will also be significantly disadvantaged by the proposed changes.

I am seriously concerned that any transfer of authority from the Department of State to the Commerce Department regarding the sale and shipping of any kind of firearms will bring a world of trouble to our country and to the rest of the world as well. The State Department has the resources and oversight to keep lethal weapons out of the hands of terrorists where the Commerce Department is all about supporting U S business without a keen focus on where the guns will go and what will they be used for. Our world is already awash in guns of all types and we don't need less oversight - we need much more. I would demand that the State Dept. should be given further powers to monitor overseas firearm sales. Commerce should be concerned with non lethal products and commodities and supporting our businesses who trade in products other than firearms.
NO to the transfer of authority from State to Commerce regarding fire arms sales.

General Comment

I do not support the changes to the rules for International Traffic in Arms Regulations.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Comments Re: Proposal for the United States to move oversight of export licenses for semi-automatic assault weapons, sniper rifles, and other powerful firearms from the State Department to the Commerce Department

I am a female senior citizen who, over a span of 76 years, has seen the sale and use of fire arms, especially assault-style weapons designed for military use, proliferate and the loss of life due to gun violence increase to a sickening and almost unimaginable level.

I vehemently oppose the proposal to move oversight of such weapons semi-automatic assault weapons, sniper rifles, and other powerful firearms not meant for use in hunting or other gun-related recreational sport, nor ever meant for self-defense from the State Department to the Commerce Department. Such weapons of war rightfully and logically belong under the purview of a military-oriented department. Further, removal of such weapons from the domain of the State Department is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. If this proposal is allowed to be enacted, Congress will no longer be automatically informed about sizable sales of these weapons, weakening controls on who ends up with such weapons even lifting restrictions on 3D printing of guns and inevitably leading to people making their own how powered weapons.

This proposal is really a sop to the gun industry and the NRA, aiding them in opening international markets and exporting U.S. guns and ammunition globally without regulation, and will likely lead to more U.S. guns ending up in the hands of criminal organizations, human rights abusers, and terrorist groups. It is a cynical move that wholly ignores the needs and rights of American citizens to live free of the fear of gun violence. It will take the country backward in the fight to reduce gun violence rather than move us forward in our efforts to promote and secure the safety of our citizens.

Further, the new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. The gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and

light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will also reduce transparency and reporting on gun exports. It would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

It is high time we stop kowtowing to the NRA and the gun lobby and start protecting our citizens rights to live free of fear of gun violence. I urge you in the strongest possible way to reject this proposal.

Ann H. Armstrong

Specifically:

I am opposed to the elimination of the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

I am opposed to the removal of licensing requirements for brokers because it will increase the risk of trafficking.

I am opposed to the removal of the State Departments block on the 3D printing of firearms. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I am concerned about the proposed changes. While I want our Second Amendment rights protected, I am also concerned that dangerous weapons don't get into the hands of the wrong people, which threatens public safety.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I live in Oregon and have advocated for gun laws enforcing safety requirements for the sake of those who want to live in a peaceful society. I disagree and disapprove of the transfer of licensing fees from gun manufacturers and I disapprove of guns leaving this country capable of being weapons of war and going to other countries where they could harm civilians. We are a country which still struggles to treat women as equal to men, and whose violent crimes are largely committed by men, possibly due to a prevailing worldview where men are the center of that world view. And so it is illogical to me to hear people declare this country the greatest country in the world and then permit weapons of war to leave our country and go to other countries where the oppression of women or minority groups might be even worse or more unpredictable. We have a moral obligation to not let destructive weapons leave our control as a country because we have not yet reached equality nor perfection in social behavior or control, and even if we say we have no morals to account ourselves to we still have the inescapable desire to call ourselves the greatest nation on earth. And that would be a lie if we did not protect others from the very failings, or worse, we ourselves have. Transferring fees from businesses who make a tool of death is only putting in 'bronze' the pervasive man centered world view as if it is here to stay and will never be lifted up from up off of the people. If the companies want to make a tool of death let them pay the associated costs. They should not be allowed to use other people to bear their responsibilities.

Subject: Do not switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department -- International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III (Docket ID: DOS-2017-0046-0001)

To: Secretary of State Mike Pompeo, Secretary of Commerce Wilbur Ross, Under Secretary of Commerce for Industry and Security Eric L. Hirschhorn, and Assistant Secretary for Export Administration Richard E. Ashooh,

I strongly oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

As you are aware, firearms exports are currently classified as "military and are under the jurisdiction of the State Department. Congress can also block sales of large batches of firearms to foreign countries. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines, Saudi Arabia, and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have sufficient staff, let alone staff in every nation around the world. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The rule change would also make the world a far more dangerous place because:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.

3) It would remove the State Departments block on the 3-D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3-D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3-D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3-D printing of firearms in the U.S. and around the globe.

I strongly urge you to reject this proposed rule change.

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,
Christopher Lish
San Rafael, CA

I am strongly against letting US gun manufacturers sell weapons abroad. Those guns will be purchased by criminal gangs and used against law enforcement and US soldiers. Selling US guns abroad is being promoted by Trump so the NRA and gun manufacturers will support Trump and give him money to support his campaign in 2020.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake. I would like our legacy, as the United States of America, to be that we made the world a safer place to live rather than create an increase in the level of violence in which the world is already dealing.

I believe the changes proposed would make gun trade too open and unregulated, endangering not only U.S. Citizens but countries receiving more guns as a result.

Sincerely,
John B. Coyle, M.S. Ed

I oppose the rules change that would move the handling of export licenses of powerful firearms from the U.S. State Department to the U.S. Commerce Department. The Commerce Department does not have the experience and resources to adequately enforce export control. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I am against this because it:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I am completely opposed to the proposed rule change. This proposed rule change seems extremely ill conceived. We have so many problems with guns in our country. Why do we want to make things more difficult for the US and the world in relationship to arms?

It will do the following if passed:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I am writing to express my vehement opposition to moving export license oversight for firearms from the U.S. Department of State to the U.S. Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is clearly inconsistent with the undeniable reality that our troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries.

Our government should not be making it easier to trade/export weapons that are likely to be used in other countries by organized crime, terrorism, human rights violations, and political violence. It is inappropriate and shameful that the proposal would, in effect, use the Commerce Department to promote trade in such weapons to kill human beings abroad. Abroad, our country already has the reputation as being overrun with guns; so our solution is to make it easier to export these weapons? The current gun export licensing oversight under the State Department is appropriate as that agency's mission is promoting stability, conflict reduction, and human rights.

In addition to reducing transparency and reporting on gun exports, the proposed rule also would: eliminate Congressional oversight for important gun export deals; transfer the cost of processing licenses from gun manufacturers to taxpayers; and, enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Shameful.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

The last thing we need to export is America's love of guns and the devastating slaughter that results from that love affair!

Leave firearms export license oversight in the State Department.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

1 It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2 It would remove licensing requirements for brokers, increasing the risk of trafficking.

3 It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please take all this into consideration before you would take the extremely dangerous step.

Thank you.

I am not in agreement with the proposed changes to the International Traffic in Arms Regulations. Intending to revise these three categories indicates a commercial pursuit not considering the deadly impact it could have on recipient countries. Widening this market with a more diverse selection will spur more international trade with international armies and polices infamously recognized for their human right repression.

I fear this will allow the United States Department of State to give clearance to gun shops across the South West to offer a wider selection for our governments and armies south of the border. I fear for that for the pursuit of commercial growth, unworthy and untrusting armed forces across the world will have access to this deregulating market.

The Federal Register of Munitions should be more mindful of who their customer base is, on an international level, and spend more time investigating the international trafficking of arms. It is no coincidence that Border Patrol Agent Brian Terry was killed with a gun supposedly monitored by the ATF's Fast and Furious Operation.

I understand the economic concerns some gun shop owners and employees and the industry as a whole may have, but the potential for US-manufactured, commercially-approved, gun-fueled violence in the world should not be overlooked due to the loss of some revenue.

As an entrepreneur and skilled maker who is capable of creating performance parts and custom sporting firearms for use in shooting competitions, I am unable to enter this market without significant financial backing. I cannot create a hammer, trigger sear, disconnector, any part. I cannot tune and improve handguns and sell them as signature upgraded firearms. Not unless I register with the DDTC, and stay registered with them annually at a great expense for a one-man show.

I support the elimination of the annual \$2,250 fee required by the Department of States Directorate of Defense Trade Control. I believe this imposed requirement was done to choke innovation and advancement in the firearms industry.

General Comment

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Semiautomatic assault weapons and other powerful firearms are clearly military and as such must continue to be under the regulation of the State Department and to allow Congress the ability to block sales of large batches of firearms to foreign countries in the name of national security, and to countries where there are serious human rights concerns. The Commerce Department just does not have the resources to adequately enforce export controls; firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The rule change would remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe, which is a terrible idea. This rule change would make both the US and the world a far more dangerous place.

Thank you.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military and therefore are under the regulation of the State Department, and thus Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Come on -- it is obvious our national security implicated. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world as this is how they make money. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I oppose the rule change that would shift the handling of firearm exports from the U.S. State Department to the U.S. Commerce Department because I believe that leaving this responsibility to the U.S. State Department maintains the safety of Americans, as opposed to the best interests of corporations and their shareholders.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military and therefore are under the regulation of the State Department, and thus Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Come on -- it is obvious our national security implicated. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world as this is how they make money. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I oppose this rule change. I believe the US State Department should continue to have control over foreign arms sales. This could otherwise become dangerous especially if weapons get into the wrong hands. Gun sales to foreign entities should remain as military sales that are carefully controlled by the US State Department. Otherwise, this could become a major security risk for our nation. The US Commerce Department is focused on promoting American business. This is not about American business. This is about American safety. The US State Department is focused on safeguarding our nation. It is the right entity to continue having control over foreign arms sales.

I am writing to oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. Firearms are a weapon of war and tight restrictions should be maintained on which foreign entities can have access to these.

The current rules automatically informing Congress about sizable weapons sales is critical to keep military-grade hardware from falling into the hands of regimes which pose serious human rights concerns towards their people, or those which would pass these weapons along to terrorist organizations.

The Commerce Department does not have the resources to adequately enforce export controls as its Bureau of Industry and Security does not have staff everywhere. This means we will be relying on the same industry self-regulation which has produced the disastrous US domestic firearms policy. In short, profit will be placed over national security.

While not perfect, the State Departments Blue Lantern program is a much better alternative to this giveaway to the gun industry.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I am a retired person concerned about the cost shift that will happen with these changes. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

General Comment

My name is Victoria Chance from Greenville, SC. I oppose this proposed rule. As a Franciscan and a citizen, we should not export semi-automatic weapons. These firearms should be dismantled and recycled. Congress needs to maintain oversight over ALL guns sales. Exporters should pay for licenses. We should never remove the block on printing 3-D firearms.

We are all responsible for the safety of one another. Passing this proposed rule would simply jeopardize the rest the world as we export our propensity for violence for the sake of money. Profit is not a justification for increasing the violence in the world. Our government should be exporting humanitarian aid, education, and our justice system NOT weapons.

General Comment

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. I am afraid of the use of assault rifles by non-military troops such as guerillas.

Eliminates Congressional oversight for important gun export deals. Congressional oversight is essential.

Transfers the cost of processing licenses from gun manufacturers to taxpayers. We taxpayers do not want to pay the cost of processing gun licenses.

Removes statutory license requirements for brokers, increasing risk of trafficking. This point suggests a complete lack of control over who will ultimately receive and use the weapons we transport. This is very dangerous.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade. This is a very good point. Guns are weapons of war and killing and should be used only as necessary in order to promote peace.

General Comment

I am a teacher within the Chicago Public Schools district. I am opposed to amending the International Traffic in Arms Regulations (ITAR) to revise Categories I (firearms, close assault weapons and combat shotguns), II (guns and armament) and III (ammunition and ordnance) of the U.S. Munitions List (USML) to describe more precisely the articles warranting export and temporary import control on the USML. Items removed from the USML would become subject to the Export Administration Regulations (EAR).

The firearms industry is hurting financially - revising these rules to benefit the fire arms industry's bottom line is NOT in the best interest of Americans or any global citizens.

We do not need more guns in the hands of those that wish to cause us harm. These high powered weapons belong in the hands of our military and not civilians.

Also, the amendments proposed would limit Congressional oversight on important gun export deals and drastically increases the possibility for gun trafficking. This is unacceptable.

I respectfully ask that the Department of State does not amend the International Traffic in Arms Regulations (ITAR).

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department vigorously oppose the rule changes that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Such trade must be factored into international interactions and diplomacy. It is not simply a matter of commerce. Further, the proposals to cease licensing would make arms too easily trafficked, especially without at least as much inspection as has been conducted with State Department oversight. And there should never be 3D reproduction of guns of any size of fire-power.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security.

General Comment

I am a 60 year old American citizen who is sickened by the unnecessary violence perpetuated by the availability of weapons.

I am opposed to the proposed rule change for the following reasons:

The proposed rule change treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

The proposed rules are bad policy and encourage bad conduct.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

General Comment

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Furthermore, it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose the proposed rule as explained in the attached.

Attachments

I oppose the proposed rule for the following reasons

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as “non-military.” But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] <<http://www.vpc.org/the-trump-administration-proposes-making-gun-exports-easier-heres-how-to-submit-your-public-comment-on-this-dangerous-proposal/?eType=EmailBlastContent&eId=2af87259-df55-4a4a-bd29-35ea1d658f42>> Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress’ proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government - i.e., taxpayers - will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3] <<http://www.vpc.org/the-trump-administration-proposes-making-gun-exports-easier-heres-how-to-submit-your-public-comment-on-this-dangerous-proposal/?eType=EmailBlastContent&eId=2af87259-df55-4a4a-bd29-35ea1d658f42>>
5. The rule reduces end-use controls for gun exports. It would eliminate the State Department’s Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S.

Government's information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter's history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

6. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.
7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.^[4] <http://www.vpc.org/the-trump-administration-proposes-making-gun-exports-easier-heres-how-to-submit-your-public-comment-on-this-dangerous-proposal/?eType=EmailBlastContent&eId=2af87259-df55-4a4a-bd29-35ea1d658f42> The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.
8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.
9. This rule would transfer gun export licensing to an agency - the Commerce Department - whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.
10. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.^[5]

General Comment

I OPPOSE this rule change. The proposed rule would dramatically change the regulatory structure for firearm exports. Further, the proposed rule is being driven by the interests of the gun industry.

I am concerned that the proposed rule will not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

The rule change would make the world a far more dangerous place in the following ways:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Rather than moving forward with the proposed rule, the Administration should SCRAP this rule and consider other alternatives to better balance the important interests at stake.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

We should not be exporting more guns especially guns of the same type that our military uses and the licensing should not be transferred to an agency the Commerce Department that already cannot fulfill its responsibilities. Licensing needs to stay with the State Department which is more focused on the harm that these weapons do to our citizens abroad and citizens of other countries.

A 2nd reason I am strongly opposed to these proposed changes is that congressional oversight would effectively be eliminated. This is extremely important because without such oversight nobody would have been aware of the scope of recent human rights violations in the Philippines or in Turkey.

We as a country need to continue to stand up for the dignity of each person - a dignity that is far more important than a few people or companies making money off of an increase in violence and killing.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

RE: RIN 0694-AF47 (Commerce) and RIN 1400-AE30 (State)

Dear Mr. Ross and Mr. Pompeo,

Catholic Health Initiatives appreciates the opportunity to comment on the proposed rules to address the Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML). Catholic Health Initiatives (CHI) is a faith-based nonprofit health system operating in 18 states with 100 hospitals and numerous other services and facilities that span the inpatient and outpatient continuum of care. As a Catholic organization, we feel a special call to reduce violence in our communities and around the world.

While these proposed rule touches many aspects of firearm regulation, sales and oversight, CHI is particularly concerned about the transfer of weapon sale regulation from the State Department to the Commerce Department and the negative effect this may have on violence around the world. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Catholic Health Initiatives

July 9, 2018

Rather, the rule proposes to transfer gun export licensing to the Commerce Department, whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The types of weapons being transferred to Commerce Department control—including the AR-15, AK-47, and other military-style assault rifles and their ammunition—are among the deadliest personal-use weapons produced in the United States. We also understand they are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

We should not export American violence solely to boost economic development, competitive advantage, or other commerce-related goals. We strongly urge the Departments of Commerce and State to rescind this proposed rule.

Thank you for consideration of our comments on this important issue. If you have any questions, please contact me at 303-298-9100 or contact Laura Krausa, Director of Advocacy, at laurakrausa@catholichealth.net.

Sincerely,

A handwritten signature in cursive script, appearing to read "Colleen Scanlon".

Colleen Scanlon, RN, JD
Senior Vice President and Chief Advocacy Officer

The US arms makers are a major source of small arms originally designed for and supplied to our military. Since 1970 or so they have hit the civilian market in vast numbers, and we are seeing the totally expected abuse with mass shootings in the

US. Really, do we want more of the same with these same guns in the hands of foreign gangsters, despotic governments, terrorists, etc.,etc? The NRA's only concern is to sell as many guns as possible, not only here, but across the world. Isn't there anyone in our government. who has the courage to push back on this insanity? Please do. General Comment

Americans Against Gun Violence opposes the transfer of oversight for regulation of firearms exports from the State Department to the Commerce Department, as proposed by the Trump Administration in the ITAR amendment, categories I, II, and III. The new proposed changes would have numerous adverse effects, including, but not limited to, the following:

Reclassifies semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime,

political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

The ITAR amendments proposed by the Trump Administration are clearly an effort to boost lagging domestic gun sales without regard to the safety of civilians in other countries. The epidemic of gun violence in the United States is a national disgrace. We should not be in the business of exporting this epidemic abroad.

Yours truly,

Bill Durston, MD

President, Americans Against Gun Violence

I am opposed to the transfer of firearms regulation from the State Department to the Commerce Department. It would open far too many opportunities for terrorists to get their hands on weapons we produce so as to use them against us.

I am a registered Republican from Kansas and I always vote. I stand with the students from Parkland and want to limit gun violence with common sense laws and regulations. Let's not follow the bad practices of Ollie North (the criminal) head of NRA.

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military.

The proposed rule would eliminate Congressional oversight for important gun export deals.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons.

The rule reduces end-use controls for gun exports.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.

The proposed change will reduce transparency and reporting on gun exports.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Organization: Amnesty International USA

General Comment

For thirty-five years I have been a member of Amnesty International USA and currently chair our Women's Human Rights Coordination Group. Amnesty International is the world's largest grassroots human rights organization, and our global movement consists of millions of members and activists who defend justice, dignity and freedom for everyone without exception. The Women's Human Rights Coordination Group's particular area of interest is in the human rights of women and girls.

We are concerned about recent proposals to move responsibility for oversight of licensing of international sales of some small arms and light weapons from the Department of State to the Department of Commerce and the removal from the US Munitions List (USML) of several semi-automatic firearms, including AR-15s, some AK-47s and high capacity ammunition cartridges. Since 2014, the U.S. has been one of the worlds largest arms dealers, and is responsible for approximately 30 percent of conventional arms transfers with regards to monetary value. Consequently, these changes would make sales of these weapons easier and expand access to them at their destination. They would also reduce accountability for their use in commission of human rights abuses.

It is now recognized that rape and sexual assault are systematically used as weapons of war in conflicts around the world. Attacks on women and girls terrorize families, communities or ethnic groups, humiliating and demoralizing local residents to bring them under control, or causing them to flee from disputed territory

In interviews with women and girls who have survived sexual violence during conflict, a very high number of their stories include descriptions of the torture they endured at the point of a gun. Although the particular models of firearms involved are seldom identified, there is no doubt that a military-style weapon contributed to gross violations of their human rights. Even after a conflict has officially ended, the weapons left behind are used all too often by perpetrators of domestic violence. Colombia receives a large proportion of their weapons from the U.S. These guns are often linked to the patriarchal culture that supports the notion that firearms help men to defend themselves and protect their families. However, these weapons exacerbate violence against women and girls. In Colombia, 2 out of 10 women who are

internally displaced identify sexual violence as the primary cause. The exact model of firearm used in violence against women and girls is irrelevant, and all military-style weapons and ammunition currently on the US Munitions List should remain there.

Amnesty International was actively involved for two decades in negotiating the global Arms Trade Treaty (ATT), which went into force in December 2014. This treaty requires that before authorizing a transnational sale of firearms, governments must assess the risk that the weapons under consideration would be used to commit or facilitate serious violations of international humanitarian or human rights law, undermine peace and security, or to engage in transnational organized crime. An "overriding" risk that the arms would be used for these purposes would prohibit the sale.

After intense lobbying by women's human rights organizations and activists during the drafting of the ATT, it became the first treaty that recognized the link between the international arms trade and gender-based violence. Article 7(4) of the treaty made it mandatory for arms exporting countries to assess the risk that weapons being considered for sale would be used to commit or facilitate gender-based violence and deny authorization in the case of an "overriding" risk.

Moving responsibility for authorizing international sales of additional weapons and ammunition from the Department of State to the Department of Commerce would bypass the requirement to assess the risk that the merchandise in question would be used to commit or facilitate human rights violations, including gender-based violence. It is essential that these standards continue to be upheld, and we strongly urge the Government to maintain responsibility for international sales of weapons and ammunition manufactured in the US with the Department of State.

Sincerely,

Alice Dahle, Chair
Women's Human Rights Coordination Group
Amnesty International USA

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I'm an expert on civilian harm and the arms trade, and I write to urge you to reject this dangerous proposal because:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, and US troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate arms exports.
2. The proposed rule would eliminate Congressional oversight for gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons, which will limit its ability to comment on related human rights concerns. Items moved to Commerce control would no longer be subject to the statutory required congressional notification for sales of firearms regulated by the US Munitions List valued at \$1 million or more. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing, leaving the government i.e. taxpayers to absorb the cost of reviewing applications and processing licenses.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for

brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

5. The rule reduces end-use controls for gun exports. It would eliminate the States Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. End-use controls also are weakened by eliminating registration of firearms exporters. Registration of exporters allows State to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. Transferring licensing to Commerce will remove new exporters and brokers of these firearms from State's database, weakening enforcement.

6. The rule enables unchecked gun production in the US and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the US and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, State has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance the Commerce does not.

8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

9. This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by State, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The export of these weapons should be subject to more controls, not less.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose the the Trump administration proposal to move the make it easier to export U.S. guns and ammunition globally. By transferring the authority from the State Department to the Commerce Department, the number of exports applicant will increase by 10,000 annually. This includes assault weapons and other powerful firearms! This change in policy is problematic because it:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I am opposed to the transfer of oversight of firearms exports from the State Department to the Commerce Department. Firearms are weapons of war. The State Department is tasked with relations with other countries and the reduction of violent conflict in the world. On the other hand the Commerce Department would be responsible for increasing the sale of such weapons in support of US arms manufacturers. The Commerce Department has no responsibility to determine the effect of a particular arms sale on the stability of a country or region.

The State Department is in a position to know the political ramifications of shipping weapons of war to any particular country or region, and therefore should be in charge regulating the sale of such weapons of war. The sale of such weapons should remain under control of the United States Munitions List (USML) .

Right now, firearms exports are classified as military. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. The Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I oppose this, or any other, rule change that would move the regulations of firearms export from the State Department to any other agency. That change would encourage firearms sales to entities that we all agree should not have them, such as oppressive political regimes, criminals and terrorists in other countries. The resulting increase in violence would not only destabilize those countries, but encourage mass migration to the United States, both undesirable outcomes.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2]

Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for

brokers of these weapons to register and obtain a license, increasing the risk of trafficking. [3]

The rule would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4]. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The export of these weapons should be subject to more controls, not less.

I come from many generations of responsible rural gun owners. There are times and places where gun ownership and use are critical; however, I find the proposal to ease restrictions on the exportation of guns and ammunition from the United States to be abhorrent. We struggle enough with gun violence in our own country, that the gun industry and the NRA are pushing to embed that struggle in other communities just to increase sales and profits is poisonous and amounts to nothing more than greed run amuck. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to MORE controls, not fewer.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Please do not switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Firearms are not just merchandise made and sold to profit businesses; they are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I work for a company that makes military life support equipment (helmets, masks). These items are protected under ITAR / EAR regulations - so that they don't fall into the wrong hands. How can we consider GUNS (any!) to be non-military items and not controlled by ITAR? The proposed rules would eliminate Congressional oversight for important gun export deals - Congress would not longer be automatically informed about sizable sales of these weapons. On top of that, the new rules would make taxpayers pay for "licenses" via the Commerce Department- not the manufacturers via the State Department. And depending on the size of the sale- this is a lot of money. In summary: the proposed change will reduce transparency and reporting on gun exports - Congress and the public will not be aware of the total dollar value of firearms sales and where they are delivered.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose a rule change that would switch the regulations of firearms export from the State Department to the Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

Hello, I am writing to express my concern for this proposal. It is inappropriate to make it easier for US guns and assault rifles even easier for other countries to get, especially since many of our guns are already used by "bad guys" across the globe. This treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries which is not ok. This eliminates Congressional oversight for important gun export deals which makes it easier to hide where the guns are going. This transfers the cost of processing licenses from gun manufacturers to taxpayers. This removes statutory license requirements for brokers, increasing risk of trafficking. This proposal reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Additionally this proposal is a bad idea because:

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Please do not allow this policy to go into effect.

Morgan Miles, LBSW

Comment on Proposed Rules on Categories i-ii-iii by Depts. of State and Commerce
John Lindsay-Poland, Global Exchange

The below comment on the proposed rules by the Departments of State and Commerce supplements the comments submitted by the American Bar Association/Security Assistance Monitor and by Amnesty International USA, which we support. Please see the attached version for complete comment, sources, and notes.

The State Department proposed rule states that those weapons that would stay on the USML are inherently for military end use, adding that the items to be removed from the USML do not meet this standard, including many items which are widely available in retail outlets in the United States and abroad. One State Department official reportedly said: We kind of refer to it as the Walmart rule. If its like something you can buy at a Walmart, why should we have control?

The Commerce Departments description of criteria for items to be moved off of the USML concludes: Thus, the scope of the items described in this proposed rule is essentially commercial items widely available in retail outlets and less sensitive military items. (p. 4) It adds that: There is a significant worldwide market for firearms in connection with civil and recreational activities such as hunting, marksmanship, competitive shooting, and other non-military activities. However, the examples given here are not from prospective importing nations, but from the United States: Because of the popularity of shooting sports in the United States, for example, many large chain retailers carry a wide inventory of the firearms described in the new ECCNs for sale to the general public. Firearms available through U.S. retail outlets include rim fire rifles, pistols, modern sporting rifles, shotguns, and large caliber bolt action rifles, as well as their parts, components, accessories and attachments.

Retail availability in the U.S. should not be a criterion, since this is not the market to which exports treated by the proposed rule will be directed. Moreover, the U.S. retail firearms market is qualitatively and quantitatively different from nearly every market in the world: with 4.4% of the worlds population, the U.S. comprises more than 45% of the worlds firearms in civilian possession.

In addition, the statement neglects another significant portion of the worldwide market for firearms: criminal organizations, illegal armed groups, and armed security forces that commit human rights violations.

In many countries, retail availability of all firearms is substantially limited. In Mexico, for example, there is only one retail outlet in the entire country for the legal purchase of any kind of firearm. In the vast majority countries, there is a presumption against civilians owning firearms unless certain conditions and requirements are met. (S. Parker, Small Arms Survey, 2011)

Many nations either do not permit or highly restrict civilian use of some or all types of semi-automatic firearms and high-capacity magazines proposed for removal from the USML, and so cannot be said to have any retail availability of these prohibited firearms. Within the United States, semi-automatic rifles and high-capacity magazines are prohibited for retail sale in six states and the District of Columbia. Certain types of handguns and certain calibers of firearms that are included in Category I are also prohibited and not available for retail purchase in some countries.

That purchase and possession of certain types firearms and ammunition are permitted under national legislation does not necessarily indicate that these items are either widely available or feasible for most people to obtain. Many countries deeply restrict retail availability of all firearms through licensing requirements, which are often extensive and time-consuming.

States impose limitations on the retail availability, types of firearms that may be legally purchased, and licensing process for parties seeking to purchase a firearm because they recognize that guns are not like ordinary commercial items that can be purchased at a store. In many countries, legal markets for firearms blend with illegal markets in vast grey areas of stolen and diverted weapons. The potential and actual negative consequences of the ill use of such firearms are devastating. A coherent, ethical, and politically strategic approach to firearm exports would increase controls to help reduce violent harm by both state and non-state actors that will more easily acquire them under the proposed rules.

The proposed rules do not articulate any requirement for a review by State Department experts on human rights and criminal organizations. If that is the proposers intent, the rule should state it clearly, and spell out the scope of license applications subject to such review, concurrences required, specifying from which bureaus and agencies, and the competencies of experts who shall conduct reviews.

GlobalExchange comment 9july2018

Comment on Proposed Rules on Categories i-ii-iii by Depts. of State and Commerce
John Lindsay-Poland, Global Exchange

The below comment on the proposed rules by the Departments of State and Commerce supplements the comments submitted by the American Bar Association/Security Assistance Monitor and by Amnesty International USA, which we support. This comment focuses on the proposed criterion of wide retail availability for firearms and munitions proposed for transfer from the USML to the Commerce Department, and includes brief comments about inter-agency review and about risks of criminal use.

The State Department proposed rule states that those weapons that would stay on the USML “are inherently for military end use,” adding that the items to be removed from the USML “do not meet this standard, including many items which are widely available in retail outlets in the United States and abroad.” (p. 5) One State Department official was quoted in a press report about the proposed rule: “We kind of refer to it as the Walmart rule. If it’s like something you can buy at a Walmart, why should we have control?”¹

The Commerce Department’s description of criteria for items to be moved off of the USML concludes: “Thus, the scope of the items described in this proposed rule is essentially commercial items widely available in retail outlets and less sensitive military items.” (p. 4) It adds that: “There is a significant worldwide market for firearms in connection with civil and recreational activities such as hunting, marksmanship, competitive shooting, and other non-military activities.” (pp. 6-7) However, the examples given here are not from prospective importing nations, but from the United States:

“Because of the popularity of shooting sports in the United States, for example, many large chain retailers carry a wide inventory of the firearms described in the new ECCNs for sale to the general public. Firearms available through U.S. retail outlets include rim fire rifles, pistols, modern sporting rifles, shotguns, and large caliber bolt action rifles, as well as their ‘parts,’ ‘components,’ ‘accessories’ and ‘attachments.’” (p. 7)

The retail availability in the United States should not be a criterion, since this is not the market to which exports treated by the proposed rule will be directed. Moreover, the U.S. retail firearms market is qualitatively and quantitatively different from nearly every market in the world: the United States, with 4.4% of the world’s population,² comprises more than 45% of the world’s firearms in civilian possession.³

In addition, the statement neglects another significant portion of the “worldwide market for firearms”: criminal organizations, illegal armed groups, and armed security forces that commit human rights violations.

In many countries, the retail availability of all firearms is substantially limited. In Mexico, for example, there is only one retail outlet in the entire country for the legal purchase of any kind of firearm.⁴ In China, firearm purchases are banned for most people, and private gun ownership is almost unheard of.⁵ In the vast majority countries, according to one of the few studies of firearms regulations, “there is a presumption against civilians owning

firearms unless certain conditions and requirements are met.”⁶

Belize, Colombia, Israel, Japan, Kenya, Turkey, and United Kingdom do not permit any civilian use of some or all types of semi-automatic firearms proposed for removal from the USML, and so cannot be said to have any retail availability of these prohibited firearms.⁷ Other nations, including Australia, Canada, Croatia, India, Lithuania, New Zealand, South Africa, Switzerland apply special restrictions to civilian possession of semi-automatic firearms, such as proof that they are needed for self-defense, and so it cannot be said that these firearms are “widely available in retail outlets” there. We emphasize that these examples are from only a selected sample of 28 countries; a full accounting of countries where there is only limited or any retail availability of semi-automatic firearms would certainly show many more.⁸ Brazil also prohibits “assault weapons” for civilian purchase, while Chile and Colombia prohibit civilian possession of semi-automatic weapons entirely.⁹

Moreover, within the United States, semi-automatic rifles and high-capacity magazines such as those proposed to be removed from the USML are prohibited for retail sale in six states and the District of Columbia.

Magazines with a capacity of more than 10 rounds are not permitted for civilians in Australia.¹⁰ Brazil, France, Romania, Slovenia, Spain, and Turkey do not permit purchase by ordinary civilians of high-capacity magazines.¹¹ DDTC policy has reportedly excluded export of high-capacity magazines except to military and law enforcement end users,¹² but nothing in the proposed rule indicates that the Department of Commerce would enact such a policy.

Certain types of handguns and certain calibers of firearms that are included in Category I are also prohibited and not available for retail purchase in some countries. In the Dominican Republic, for example, “certain firearms are considered ‘war weapons’ and can only be used by government forces, including .45 calibre pistols [and] rifles,” according a Small Arms Survey study,¹³ while Spain prohibits civilian purchase of firearms with a caliber of 20 mm or higher, which are considered to be “designed for war use.”¹⁴ More types – in some cases all types – of handguns are prohibited for civilian purchase in Belize, Canada, Colombia, Japan, Kazakhstan, the Russian Federation, the United Kingdom, and Venezuela.¹⁵

That purchase and possession of certain types firearms and ammunition are permitted under national legislation does not necessarily indicate that these items are either widely available or feasible for most people to obtain. In addition to prohibitions or restrictions on retail availability of types of firearms, many countries deeply restrict retail availability of all firearms through licensing requirements, which are often extensive and time-consuming. In India, for example, obtaining a license to acquire a firearm requires the applicant to demonstrate training in use of a gun, and often takes years.¹⁶ Japan requires gun buyers to go through 12 processes before purchasing any type of firearm.¹⁷

States impose limitations on the retail availability, types of firearms that may be legally

purchased, and licensing process for parties seeking to purchase a firearm because they recognize that guns are not like ordinary commercial items that can be purchased at a store. In many countries, legal markets for firearms blend with illegal markets in vast grey areas of stolen and diverted weapons, and of private security companies. The potential and actual negative consequences of the ill use of such firearms are devastating.¹⁸ A coherent, ethical, and politically strategic approach to firearm exports would increase controls to help reduce violent harm by both state and non-state actors that will more easily acquire them under the proposed rules.

Processes for gun exports reflect substantive priorities and as such are integral to policy. The National Sports Shooting Foundation (NSSF) claims that under the proposed rule, “Applications would go through the same interagency review process, including by the Defense Department and the State Department’s human rights and other experts.”¹⁹ However, the proposed rules do not articulate any requirement for such a review by State Department experts on human rights and criminal organizations. If that is the proposers’ intent, the rule should state it clearly, and spell out the scope of license applications subject to such review, concurrences required, specifying from which bureaus and agencies, and the competencies of experts who shall conduct reviews.

I am a U.S. taxpayer, resident, and citizen by birth. I oppose the transfer of oversight of firearms export from the State Department to the Commerce Department. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not fewer. Thank you.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Subject: ITAR Amendment - Categories I, II, and III
EAR Amendment - RIN 0694-AF47

I am writing to submit comments on the proposed changes to ITAR (USML) and EAR (CCL) recently published in the Federal Register. I write in a personal capacity but the views expressed are informed by my research, policy analysis, and teaching as a professor at the University of Michigan, Gerald R. Ford School of Public Policy.

By way of a few introductory remarks, I am familiar with the complexities of US arms export laws and policy, as well as the regulatory framework. There is a legitimate need for periodic updates of the USML and—in view of the labyrinth of entangled laws, regulations, and agencies involved in the current system—I am supportive of the reform initiative. I am generally more concerned about keeping weapons out of the hands of those who would misuse them than in making them easier to procure, but that end is not at odds with the objective of putting in place a single control list and a single administrative agency. The reform effort has not progressed to that point, however, and I am wary about these proposed regulatory changes as an interim step. I will also add that I have been following the export control reform project since it was announced in 2009 and this is the only time I have felt the need to express concerns about the proposed changes. That is largely due to the particular, complete and recognizable, weapons that are being considered for change.

1. I urge you to delay the effective date of the proposed changes until the Government Accounting Office or the Library of Congress has publicly reported to the Congress their impact on numerous statutes referring to “defense articles.”

If enacted, the changes would have implications for several provisions of law. From my reading of both sets of proposed regulations, I am not reassured that the implications have been fully considered. The USML is formally defined in the AECA (22 USC 2778) as a definitive list of defense articles,¹ and from a quick search of US statutes the term “defense article” appears in some 45 sections,² in many instances (but

¹ 22 USC 2778(a)(1).

² Office of the Law Revision Counsel, United States Code, <http://www.uscode.house.gov>.

not always) explicitly linked to the USML. In addition, several provisions of the AECA itself are explicitly linked to an item's presence on the USML (without necessarily referring to "defense articles"). On a separate statutory track, the Foreign Assistance Act was recently amended to include CCL 600 series items as defense articles, along with all items contained on the USML [22 USC 2304.(d)(2)(C)], but the legislation did not anticipate the new 500 series so there is likely a gap there with regards to Congressional intentions. To complicate things further, the US Munitions Import List (USMIL) makes liberal use of the term "defense article," defined as articles on the USMIL—which currently include the same items that are slated to lose the "defense article" designation that extends from inclusion on the USML – so that items designated as defense articles on the USMIL will not be considered defense articles for purposes of export.³

It is very challenging to sort out the tangle. Some of the instances where terms and definitions are at variance may not prove significant, but others may have far-reaching implications. Due to the disparate definitions and linkages, the proposal to remove specified firearms from the USML raises some important questions about the continuing applicability of provisions of law that refer to "defense articles," a term that currently encompasses such firearms. In numerous situations the current statutory treatment of non-automatic firearms would be altered – or at least become ambiguous—as a result simply of moving these weapons from Category I of the USML to the 500-series on CCL. Statutory provisions that could be affected by the proposed change range from Export-Import Bank financing of defense article sales to human rights conditionality on security assistance, to the provisions for third-party transfer of grant-supplied defense articles, and various reports to Congress. (See references in the footnote below.⁴) In some cases, the law in question is not directly linked to arms exports, but the relevant statute refers to defense articles and links the definition to items on the USML. In this way, removing specified firearms from the USML is likely to have a host of unintended and unanticipated repercussions.

Further, if semi-automatic weapons and other non-automatic firearms are removed from the USML it will impact the ability of law enforcement to charge weapons traffickers with violating the AECA as was done in several of the cases cited in a recent report from the Department of Justice on export enforcement.⁵

³ 27 CFR 447.11 and 27 CFR 447.21.

⁴ The numerous places where the meaning of "defense article" would be called into question by the proposed rules include:

- Export-Import Bank financing of defense article sales, including multiple end use considerations and other conditions (12 USC 635);
- Requirement to give Congress notice of commercial firearms sales of \$1,000,000 or more (22 USC 2776)
- Annual report to Congress on military assistance, and specifically on transfers of USML Category I firearms (22 USC 2415)
- Provisions for supplying defense articles on a grant-basis, and multiple restrictions (22 USC 2314)
- Conditions for third-party transfer of defense articles provided on a grant basis (22 USC 2314)
- Certification of end use as a condition of sale or lease of defense article (22 USC 2753)
- Post-delivery verification of credible reports of misuse of weapons (22 USC 2753)
- Brokers of items included on the USML are required to register and activity must be licensed; exporters of USML items must identify all consignees and freight forwarders in license application (22 USC 2778)

⁵ Department of Justice, "Summary Of Major U.S. Export Enforcement, Economic Espionage, And Sanctions-Related Criminal Cases," January 2018, <https://www.justice.gov/nsd/page/file/1044446/download> .

As Acting Assistant Secretary for Political-Military Affairs Tina Kaidanow explained to the House Foreign Affairs Committee last June,⁶ the US arms export architecture is very complex and involves what her predecessors have described as “cradle to grave” oversight of exported US *defense articles*. Removing that designation *defense article* from weapons that are not fully automatic has the effect of detaching them from the US Munitions List and the regulatory framework built around it: there may well be significant unintended consequences.

In the event that consideration of the proposals is not delayed, I would recommend several other changes to the proposed ITAR and EAR revisions.

2. Retain existing USML I(a) and (d) unchanged; retain the existing coverage of USML II(a) unchanged; delete proposed 0A501.a and .b; and limit proposed 0A502 to renumbering existing 0A984.

My concern here is based on principle and definition. Several of the weapons that would be moved to CCL are military-style weapons that are either used in battlefield situations or are substantially comparable to weapons as used in battlefield situations – including semi-automatic assault rifles and bolt-action sniper rifles. All of USML I(a), I(d), and II(a) are currently designated “significant military equipment” due to “their capacity for substantial military utility or capability,” per the ITAR definition.⁷ The prevalence of armed extremists and insurgents who depend on weapons currently included in USML Categories I and II makes the military utility or capability of these weapons as relevant as ever. Due to their size and long shelf life, firearms are easily diverted and resold on black markets around the world. The Department of Justice’s January 2018 summary of major US export enforcement cases noted above includes recent smuggling of semi-automatic assault rifles (and other firearms) to Dominican Republic, the Gambia, Russia via Latvia, Thailand and other destinations. In addition, the report documents the case of two men in Georgia attempting to export firearms to a range of international on the dark net, and another similar case from Kansas.⁸

While the US military may not derive great advantage from most of these weapons, they still have the military utility and capability of threatening the lives and welfare of many people around the world. It is in the interest of the US and American citizens to keep the tightest control on them. Indeed, it is for that very reason that the same weapons being proposed for removal from the US Munitions List are expected to remain on the US Munitions *Import* List, where their entry into the US will remain tightly controlled. It is also for that reason that a growing number of states are imposing limitations on the retail availability of these weapons and many retailers are voluntarily removing them from their shelves. They should remain where they are, on the USML.

⁶ “Foreign Military Sales: Process and Policy,” testimony from Tina S. Kaidanow, Acting Assistant Secretary, Bureau of Political-Military Affairs, Statement Before the Subcommittee on Terrorism, Nonproliferation and Trade, House Foreign Affairs Committee, June 2017. <https://www.state.gov/t/pm/rls/rm/2017/271928.htm>.

⁷ 22 CFR 120.7 at <https://www.gpo.gov/fdsys/pkg/CFR-2004-title22-vol1/pdf/CFR-2004-title22-vol1-sec120-7.pdf>.

⁸ Department of Justice, *op. cit.*.

3. Before proposed regulatory changes are adopted, an opinion should be obtained from the Department of Justice concerning the legality of applying ITAR brokering restrictions to exports of firearms transferred from the USML to the CCL. Furthermore, Congress and the public should be informed as to how the proposed arrangements will address the risk of diversion.

There are several reasons to be concerned about the proposed rules pertaining to brokering. From their origin in the 1930s, a major intent of efforts to regulate arms exports has been to curtail illicit and undesirable trafficking in weapons. In the 1980s and 1990s, illicit flows of small arms flooded international markets, with calamitous effects in every region of the world. The rate of flow may have slowed since the 1990s, but as the 2018 Justice Department report attests, the efforts to supply contraband firearms are very much alive in our own time. From a global perspective, brokering laws are considered a weak link in the regulatory apparatus, to the extent that in the 1990s there was some talk of negotiating an international treaty focused entirely on arms brokering. Provisions written into US law around that time were considered some of the strongest in the world. With the transfer of specified semi-automatic and non-automatic weapons to CCL, the brokering laws would no longer be applied to these weapons (or would be applied only in a much-weakened version) and they would not be available to law enforcement for prosecution purposes.

My specific concerns with the proposal to apply existing AECA/ITAR brokering rules to items intended for transfer to the CCL are twofold, related to the dubious statutory underpinnings of the proposed rule change and to its practical implications.

(a) The first concern is a matter of statutory coherence and proper statutory authority. The brokering clauses of the AECA require commercial brokers involved in the transfer of defense articles to register with the State Department and apply for their transactions to be licensed (22 USC 2778).⁹ The AECA brokering provisions are explicitly linked to defense articles on the USML (and by implication, ITAR). Because the proposed changes to ITAR and CCL would remove specified non-automatic and semi-automatic firearms from the USML, on the face of it, it would seem that commercial brokers of these items would be released from ITAR registration and brokering requirements. To prevent this outcome, the State Department proposes a patch, by asserting that the AECA brokering provisions will also apply to the US Munitions *Import* List (which, as noted above, will continue to include the items that—for export purpose—are deemed no longer to warrant control under the USML). The intended effect is that brokers wanting to *export* items included on the list of items controlled as defense articles for *import* (but not for export) will be subject to the rules pertaining to the export of such items. The logic is convoluted at best, and it raises questions about the statutory grounding for requiring brokers who are exporting items “no longer warranting control under USML” to register with the State Department and comply with related ITAR requirements. Given the complexity of the issue and the risks associated with brokering activities, it would seem advisable and prudent to seek a legal opinion within the Executive Branch to ensure that the provisions of the AECA pertaining to brokers—including the registration requirement-- can be applied

⁹ Per 22 USC 2778 (b)(1)(A)(i), “...every person (other than an officer or employee of the United States Government acting in official capacity) who engages in the business of brokering activities with respect to the manufacture, export, import, or transfer of any defense article or defense service designated by the President under subsection (a)(1), or in the business of brokering activities with respect to the manufacture, export, import, or transfer of any foreign defense article or defense service (as defined in subclause (IV)), shall register with the United States Government agency charged with the administration of this section, and shall pay a registration fee which shall be prescribed by such regulations.

robustly to all involved in the wide range of brokering activities associated with the *export* of items on the US Munitions Import List.¹⁰ Such a legal opinion should be obtained and considered before the regulatory changes are adopted.

(b) The second issue about brokering rules relates to the practical effects of the numerous proposed changes to ITAR section 129. It is hard to imagine, in the first place, the steps by which the licensing of a transaction will be handled by Commerce and any brokering aspects (including completion of information required by 22 CFR 129.6) will be handled by State. It boggles the mind to consider how this might actually amount to a time-saving simplification of rules. I am primarily concerned about the proposed amendment 129.2(b)(2)(vii), however, which appears to negate the controls on brokering for transactions subject to EAR and open a significant loophole for unscrupulous brokers. If I have understood the proposed changes to Section 129.2 correctly, if a Michigan-based retail sports outlet licensed to sell firearms in the US wanted to sell, say, AR-15 semi-automatic rifles to clients in another country, then so long as the Michigan retailer could secure approval via the BIS licensing process, the various parties involved in shipment, financing, and possibly transshipment would be exempt from any registration and approval requirements. Nor would they necessarily be known to licensing and enforcement agents based in the Commerce Department. What in this scenario would deter an unknown and independent handler from diverting the weapons to unauthorized end-users? I would like to assume that government officials in the State and Commerce Departments have thought through the implications of the proposed rules as they might be bent for nefarious purpose as well as their service for industry cost and convenience, but the published rules do not provide assurance in that regard. **More clarification is needed about how the brokering regulations will be applied, how the inter-agency process will be managed, and the extent to which the proposed arrangements for registering and licensing brokers involved in acquiring, financing and transporting exported firearms will address the risk of diversion to non-authorized end-users.** One effect of transferring non-automatic firearms from the USML to the CCL is to remove them from the remit of the State Department's Blue Lantern program, which otherwise might be engaged to make post-shipment checks. It is not clear whether Commerce has a comparable program or what resources it will assign to monitoring the commerce in semi-automatic firearms.

4. Amend proposals for EAR Section 734.

BIS has indicated that items moving “to the CCL would be subject to existing EAR concepts of jurisdiction and controls related to ‘development’ and ‘production,’ as well operation, installation, and maintenance ‘technology.’” This approach would appear to give rise to the possibility of widespread and openly sanctioned circulation of open source, non-proprietary instructions for using computer-aided design (CAD) files to produce via 3D-printing technology, or text files to produce via CNC milling the firearms removed from USML. Until now, this development has been blocked in the courts via application of ITAR provisions requiring export license. **Either the Department of Commerce should clarify that it views any software instructions for producing controlled firearms already to be within the ambit of the EAR, or EAR Section 734.7 should be amended to bring circulation of open-source, non-proprietary CAD and other electronic files under EAR control - possibly by establishing that electronic files for producing functional firearms are subject to EAR control as production technology.**

¹⁰ When questions arose in 1996 as to the authority of the President to restrict munitions imports under the AECA, the Office of Legal Counsel in the Justice Department was asked to provide an opinion. A similar request for opinion is warranted here. See https://www.justice.gov/sites/default/files/olc/opinions/1996/02/31/op-olc-v020-p0049_0.pdf.

5. Amend provisions for License Control – Crime Control

Shotguns controlled under 0A502 are subject to the Crime Control because they are not controlled by Wassenaar. It is not evident, however, why items 0A501a are controlled for Regional Security but not Crime Control, as firearms are a main element of crime control equipment used by police and security forces. Moreover, federal statutes explicitly prohibit the export of crime control equipment to police and security forces in countries whose governments have a consistent pattern of gross violations of internationally recognized human rights, with exceptions requiring Presidential certification. **To bring the proposed regulations into alignment with provisions of the Foreign Assistance Act [22 USC 2304(a)(2), which makes explicit reference to crime control equipment under the aegis of the (expired) Export Administration Act], items in 0A501A should be subject to Crime Control.**

6. Include information from enhanced reporting on certain firearms exports in annual 655 Report.

Enhanced reporting of items in the 501 series is potentially one bright spot in the proposed regulations. Several proposed changes are welcome, including: proposed changes in EAR part 748 requiring information about required import licenses; proposed changes in reporting mandated in EAR part 758; the required use of EEI filing for 0A501.a firearms; and the proposed recordkeeping requirement in part 762.

If the proposed rules are ultimately accepted, the information provided to the Wassenaar Arrangement and the UN Register of Conventional Arms will provide more granular information about US commercial exports of firearms, which seemingly could be included without significant additional effort in the annual 655 report mandated by the Foreign Assistance Act, 22 USC 2415.

7. The balance of costs and benefits significantly favors industry over the taxpayer.

The two sets of proposed rules include calculations of expected costs and benefits of the changes. Having invested several hours parsing the proposed rules, I suspect that one major benefit of the changes will accrue to the attorneys who help clients wend their way through federal regulations. The registration system as it was initially set up was intended to pay for itself, via modest registration and licensing fees that covered the costs of recording and updating information on US arms manufacturers and reviewing details for proposed transactions. In some sense, it has been a fee-for-service arrangement. The proposed changes significantly alter that approach with regards to firearms proposed for transfer to the CCL.

Except for the presumably few brokers unable to qualify for the firearms registration exemption outlined in proposed changes to ITAR section 129.2, no registration or license fees will be collected. Some of the transactions may be straightforward, but the workload promises to be substantial, with 4000-10,000 applications and virtually every 0A501 transaction subject to at least regional security controls, with no license exceptions available. **Whereas under the current system fees paid by industry and brokers help offset the costs of processing the license applications, under the proposed system the expenses associated with reviewing license applications will be charged to the taxpayer.** In the current political environment where government hiring is anathema, unless a streamlined new process delivers extraordinary returns, it is difficult to imagine how the tally could come out in the taxpayer's favor without

significant sacrifice of quality control. With respect to firearms exports, taxpayers and the public at large should be concerned about pressures to cut corners that could result in authorization of irresponsible transfers. **In my view as a taxpayer, the ITAR fee structure is yet one more reason for retaining non-automatic and semi-automatic firearms on the USML, and should these weapons ultimately be transferred to the CCL, I urge public officials at the Commerce Department to explore charging a service fee for processing export license applications.**

Conclusion

I appreciate the opportunity to comment on these rules. I am disappointed, however, that by and large they downplay the lethality of the weapons currently controlled in ITAR categories I and III. I realize that these documents were prepared for a different purpose than the materials posted to inform the global public about US government programs and policy, but **the difference between the tone and emphasis of the proposed rules and the public presentation of US policy on the export of small arms and light weapons over the past twenty years is striking.** By contrast to the public statements and documents, including the 2017 Congressional testimony by a State Department official, the emphasis in these regulations is on reducing transaction costs for industry rather than promoting the public good, including national security and public safety.

In response to public comments on the proposed regulatory changes, I hope that the Departments of State and Commerce will reconsider the proposal to transfer any complete weapons from the USML to CCL. In the event that the proposed regulations go forward substantially unchanged, I can only hope that other countries will tighten and strictly enforce their own import restrictions to reduce the risk of diversion and misuse.

Thank you,

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I oppose the proposed rule for the following reasons:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

On May 24, the Trump Administration formally proposed a new rule to loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The rule change would make the world a far more dangerous place because:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The idea that exporting and selling guns to other countries is just another sale seems absolutely ridiculous to me. This is not like shipping apples overseas. Apparently farmers of some products are now being impacted with tariffs, but we want to make it easier to sell guns?? How does this make sense? It's also looking like Russians may have made political contributions to our elections via the NRA. I'm sure I have a lot of company in thinking that this is crazy.

Thank you for your time and consideration. I hope you will vote against this change in rules.

General Comment

I strongly OPPOSE the proposed rule.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Loosening the regulations over gun exports increased the risk that dangerous weapons could end up in the hands of international criminals. The proposed rule does not adequately address our security needs, terrorist threats, and the need for transparency so Congress and the public may understand the impact of these rules.

The administration should consider other alternatives to better balance the important interests at stake. The rule change removes licensing requirements for brokers, increasing the risk of trafficking, and removes the State Dept. block of 3D printing of firearms. effectively enabling such printing of lethal weapons in the US and around the world.

American citizens want more regulations on firearms especially concerning shipments that could make terrorism even more likely. We do not want less regulatory action, we want more regulations on guns and selling guns.

The rule change would make the world a far more dangerous place:

1 It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2 It would remove licensing requirements for brokers, increasing the risk of trafficking.

3 It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The Commerce Dep't is ill equipped to handle the technicalities that make arms exports a reasonably safe endeavor.

Please do NOT approve the change

I am deeply troubled by loss of all reasonable controls of articles which may be used to kill human beings. Of particular concern are:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

The Commerce Department does not have the resources to enforce export controls.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

One is merely offensive - the cost of licenses should be borne by end users and not transferred to the rest of us.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Comments re: ITAR Amendment - Categories I II, and III; EAR Amendment - RIN 0694-AF47

Jeff Abramson

July 9, 2018

I have worked in the nonprofit sector for more than a decade in efforts to promote more responsible trade in conventional weapons and find these proposed regulatory changes to be irresponsible and dangerous. They continue the wrong-minded approach of the Trump administration to treat weapons as any other trade commodity, threatening to undermine long-term global security and true U.S. national security interests. While my comments below are as an individual concerned U.S. citizen, they are informed by my work as a senior fellow at the Arms Control Association, coordinator of a global network of professionals engaged on these issues –the Forum on the Arms Trade--, and former leader within the international Control Arms campaign that championed the creation and now implementation of the Arms Trade Treaty.

In addition to these comments, I commend to reviewers the comments by experts listed by the Forum on the Arms Trade, including: Colby Goodman, William Hartung, Christina Arabia; Adotei Akwei (on behalf of Amnesty International USA); and John Lindsay-Poland, which delve into many of these points in much greater detail.

Specific concerns include:

Loss of Congressional oversight

In 2002 Congress amended its notification threshold so that it would be informed of potential commercial sales of firearms under USML category I when they were valued at just \$1 million, as opposed to \$14 million for other major weapons sales. Such notifications have been instrumental in forestalling unwise sales, including last year to Turkey and the Philippines. No similar statutory requirement of congressional notification exists for most arms sales under the CCL, meaning Congress would lose its oversight role on these weapons.

Public reporting should be improved, not weakened

The public gains some insight into the transfer of weapons via Congressional notifications, and also through the State Department's 655 report and Blue Lantern investigations report. Those reports could provide much more detail, such as the number of specific weapons involved and other data, rather than broad categorical details (655 report). Commerce reporting provides even less data, with similar reports covering around 20 countries per year. We deserve better transparency, not worse. If this transfer of authority moves forward, the Commerce department should be required to improve its reporting.

Non-sensical to no longer consider these military weapons/defense articles

The transfer of regulatory authority to the Commerce Department is claimed to be wise because these weapons no longer "provide the United States with a critical military or intelligence advantage or, in the case of weapons, are inherently for military end use," and further because many "are widely available in retail outlets in the United States and abroad."

Applying this general approach--taken from the larger export reform initiation--falls apart when we are looking at firearms and their ammunition. These weapons are and should be controlled because a

significant amount of violence that occurs, including against U.S. military and law enforcement personnel, is inflicted by small arms. Research indicates that the types of weapons being transferred to Commerce control—AR-15s and AK-47 style assault rifles and their ammunition—are “weapons of choice” of drug trafficking organizations in Mexico and other Latin American countries. Many can also be easily converted to fully automatic weapons, which will remain under USML control. U.S. military members often operate their fully-automatic-capable weapons in a semi-automatic or less-than-automatic mode. Plus, many sniper rifles to be moved to Commerce control are in U.S. military use.

In addition, in many of the countries where these weapons are likely to be marketed, they are considered military weapons and tightly controlled. As currently proposed, they would also remain on the US Munitions Import List (USMIL), which is proper. Why they would therefore not remain on a similar export list is illogical.

Being commercially available in the United States is not a good indicator of whether these weapons merit the oversight of the State Department, which is better tasked with weighing non-commercial concerns. Nor is it proper to consider these weapons somehow safer than others on the USML.

Upsetting norms on human rights as relates to the arms trade

The United States maintains strong laws against the provision of arms where certain human rights abuses are of concern (even if we do not always live up to those laws). Some of those laws may not apply to items in the 500 series. And although the State Department will be consulted in licensing decisions, it is difficult to see how this new approach would strengthen the ability of DRL and others concerned about human rights to forcefully insert human rights into arms sales decisions.

At a time where the global community must make the arms trade more responsible, these proposed changes would make its largest arms dealer, the United States, appear less responsible and less concerned about the human rights implications of the arms trade.

Making 3-D printing easier is dangerous

It is unfathomable how allowing untraceable 3-D printing of firearms serves U.S.-recognized goals to combat illicit trafficking of firearms. Our country has agreed to support the Program of Action (PoA) on small arms and light weapons and the International Tracing Instrument (ITI), has signed accords on arms transfers and tracing in the Americas, and argued for why these efforts are so important. The United States also is the world’s largest donor, as I understand it, to helping countries build their ability to trace weapons, secure weapons stockpiles, and to destroy those stocks when warranted. Yet, this transfer of authority to Commerce appears to open the door to unfettered 3D printing, which threatens to undermine nearly all those efforts.

Overall

At a fundamental level, U.S. arms are not like any other commodity and should not be treated as such. These are first and foremost killing machines. The over-emphasis on economic security threatens to jeopardize higher priorities, including peace and security concerns. If more weapons flow to countries with poor human rights records, norms around responsible weapons use and transfer will be harder to build and uphold.

General Comment

My name is Suzanne and I'm a voter in San Diego, CA. As a victim of gun violence, I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. T

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

ATTN: Request for Comments Regarding Reform of USML Categories I, II, and III
Public Notice 10094, RIN 1400-AE30, 83 FR 24198

Dear Ms. Heidema:

Esterline Technologies Corporation supports the goals and objectives of the Export Control Reform (ECR) Initiative, and submits the following comments on the reform of USML Categories I, II, and III:

Summary of Comments and Recommendations

This section outlines our main comments, each of which is explained more fully in the remainder of this letter.

1. Keep the Commerce Control List free of AECA brokering.
2. Coordinate changes to USML Categories I, II, and III with changes to the United States Munitions Import List.
3. Clarify classification of propellant containers and combustible ordnance components.
4. Address conflict with companion rule 83 FR 24166.

Comments and Recommendations

1. Keep CCL free of AECA brokering

One of the main advantages of ECR is that items on the CCL are not subject to the brokering requirements in section 38(a)(1) of the Arms Export Control Act (AECA) and 22 CFR 129. This advantage has been highlighted by the U.S. Government in public

remarks, such as Under Secretary Hirschorn's address to the BIS Update 2014 Conference.

Absence of brokering controls for CCL items has more significance than the absence of double licensing. Currently, items subject to the CCL do not require registration or licensing under 22 CFR 129, period. Once an item is determined to be on the CCL, it is clear that it is not subject to brokering, so there is no need to review the USMIL or the requirements in 22 CFR 129 before engaging in business. Knowledge that items on the CCL are not subject to brokering simplifies and streamlines transactions. Addition of brokering requirements for any item on the CCL would be an unwelcome development as it would introduce a significant complicating factor.

Esterline recommends DDTC reform USML Categories I, II, and III without introducing brokering controls to items in the CCL.

2. Coordinate changes to USML Categories I, II, and III with USMIL

The proposed rule would add the need to review the USMIL for activities that are not imports to the United States. Classifying items against multiple control lists for a single transaction increases the cost and complexity of U.S. export controls.

Esterline recommends DDTC coordinate its change to USML Categories I, II, and III with the Bureau of Alcohol, Tobacco, Firearms, and Explosives so that a corresponding change is made to the USMIL at the same time. This would eliminate the need to consider both the USML and the USMIL when deciding whether a transaction involves brokering.

3. Clarify classification of both combustible and consumable case components.

With regard to the proposed paragraph III(d)(7), Esterline suggests changing the text from

(7) Cartridge cases, powder bags, or combustible cases for the items controlled in USML Category II

to

(7) Cartridge cases, powder bags, charges, propellant containers, or combustible cases for the items controlled in USML Category II, or "specially designed" parts and components therefor.

Alternately, include an explanatory note:

Note to paragraph (d)(7): combustible cases include propellant containers for mortar systems and artillery charges, consumable case sets that include both combustible and inert parts and components, and their parts such as closure tabs and interfaces.

This change would more clearly describe the range of articles that DDTC appears to be intending to capture in this paragraph, and would simplify the classification of their parts and components which are inherently for military end use.

4. Address conflict with companion rule 83 FR 24166

The proposed rule is in conflict with the companion Commerce Department proposed rule, 83 FR 24166, Docket No. 111227796-5786-01, RIN 0694-AF47. This leaves items transferred from the USML to the CCL potentially without a controlling ECCN.

Esterline recommends DDTC coordinate with BIS to resolve this conflict.

The BIS proposed rule states:

Category III of the USML, entitled "Ammunition/Ordnance," encompasses ammunition for a wide variety of firearms that may have military, law enforcement or civilian applications. Ammunition that has only or primarily military applications would remain on the USML as would parts, production equipment, "software" and "technology" therefor.

The State Department proposed rule states with respect to USML Category III:

Additionally, paragraph (c), which controls production equipment and tooling, will be removed and placed into reserve. The articles currently covered by this paragraph will be subject to the EAR.

In effect, the BIS proposed would receive specific production and test equipment for conventional ammunition into ECCN 0B505, while the State Department proposed rule would move all production and test equipment for ammunition and ordnance to the CCL, conventional or otherwise.

ECCN 0B505 would only control equipment specially designed for the production of ammunition and ordnance that is controlled in USML Category III if it falls within the list "tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment." This list is less than the scope of production equipment that will no longer be controlled in USML Category VIII(c) by the proposed companion rule, 83 FR 24198.

Similarly, ECCN 0E505 would not control technology for the technology for equipment specially designed for the production of ordnance, or technology for the software specially designed for such equipment.

A number of the articles proposed for USML Category III by 83 FR 24198 are not conventional ammunition, and their specially designed production equipment exceeds the specific list "tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment."

For example, production of combustible ordnance requires specialized production machines that do not fall within the list "tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment." Under the proposed rules, these specialized machines would fall outside both the USML and ECCN 0B505.

Summary

Thank you for the opportunity to comment on the proposed reform of USML Categories I, II, and III. Please feel free to contact me if you have any questions about the comments and recommendations provided.

Regards,

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer. Please help us to protect the lives of innocent Americans. As a student, I am begging you to keep classrooms safe and restrict gun purchasing access, not loosen it. Thank you for hearing your citizen's voices.

General Comment

I strongly OPPOSE switching the regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It would remove the State Department ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally.

It would remove licensing requirements for brokers.

Would stop the program that inspects pre-license guns and issues reports.

Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and fuel increased organized crime and terrorism.

There is NO need switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move.

General Comment

I am an active member of San Diego 4 Gun Violence Prevention and it has come to my attention that the Trump Administration is proposing to transfer licensing and oversight of firearms exports from the State Department to the Department of Commerce. It is my opinion that if this occurs, more firearms will get in the hands of criminal organizations, human rights abusers, and terrorist groups and is being pushed to open up international markets to compensate for lagging domestic gun sales. I am vehemently opposed to this proposed change for these reasons:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.
- Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

Please consider not implementing this proposal.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

ECR Parts Comment

**Comment on Proposed Rule for “International Traffic in Arms Regulations: U.S.
Munitions List Categories I, II, and III”**

RIN 1400–AE30

Comment on Proposed Cat. I(g) and Cat. I Note 1

This law firm, Mark Barnes & Associates, submits this comment on behalf of our clients engaged in the manufacture of firearms and associated parts. The purpose of this comment is to request that the final rule clarifies Cat. I(g)’s applicability to parts such as machinegun barrels that are commonly used in both semiautomatic and fully automatic firearms.

The proposed Cat. I(g) would list: “Barrels, receivers (frames), bolts, bolt carriers, slides, or sears specially designed for the articles in paragraphs (a), (b), and (d) of this category.” The articles in paragraphs (a), (b), and (d) of Category I would encompass firearms that use caseless ammunition, fully automatic firearms to .50 caliber inclusive, and fully automatic shotguns. In other words, Cat. I(g) would control barrels, receivers, bolt carriers, slides, or sears (“Parts”) specially designed for fully-automatic firearms.

The proposed rule includes Note 1 to Category I which clarifies that “Paragraphs (a), (b), (d), (e), (g), (h), and (i) of this category exclude: . . . parts, components, accessories, and attachments of firearms and shotguns in paragraphs (a), (b), (d), and (g) of this category *that are common to non-automatic firearms* and shotguns. The Department of Commerce regulates the export of such items.” (emphasis added).

Aside from a sear and receiver, it is extremely rare for any part or component of a fully-automatic firearm to not be common to a non-automatic firearm. Almost all fully automatic firearms have semi-automatic variants available on the commercial market. For example, FN USA manufactures and sells to the public a semi-automatic variant of the belt fed M249 Squad Automatic Weapon (SAW) with the only distinction from the fully automatic version being the receiver and fire control group. (<https://fnamerica.com/products/rifles/fn-m249s/> “Semi-auto replica of the government-issue FN M249 SAW”). The barrel is identical to the fully automatic version. Accordingly, it would follow that a military M249 barrel would be controlled by the Department of Commerce.

Many companies will buy fully automatic firearms with destroyed receivers (“parts kits”) from the military or police departments to construct and sell semi-automatic variants to the public. These parts kits generally consist of all parts other than the receiver (which is usually cut into three parts with a torch). Additionally, Mil-spec M4 and M16 fully automatic bolt carriers as well as barrels specially designed for fully automatic fire, are often sold with and made for civilian AR-15s.

Based upon the plain reading of the proposed Cat. I Note, some clarification is needed as to whether barrels, receivers (frames), bolts, bolt carriers, slides, or sears are non-ITAR simply because they are incorporated in semi-automatic variants on the civilian market, as almost all firearms parts, especially barrels, can be common to both semi-automatic and fully automatic firearms. We think that unless a part converts a firearm to fully automatic functionality, it should be controlled by the Department of Commerce.

Should you have any questions on this comment, please do not hesitate to contact Michael Faucette at (202) 626-0085 or michael.faucette@mbassociateslaw.com.

Re: Safari Club International Comments on Proposed Amendment to the International Traffic in Arms Regulations: Revision of U.S. Munitions List Categories, I, II and III, Docket RIN 1400 AE30, DOS-2017-0046; and Proposed Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML), RIN 0694-AF47, Docket No. 111227796-5786-01.

Dear Sirs:

Safari Club International (SCI) submits these comments in support of the U.S. Department of State's proposed amendments to the International Traffic in Arms Regulations (ITAR) to revise Categories I, II, and III of the U.S. Munitions List (USML) to describe more precisely the articles warranting export and temporary import control on the USML. SCI also supports the Department of Commerce, Bureau of Industry and Security's proposed determination that these items no longer warrant control under the U.S. Munitions List (collectively referred to as "proposed regulations").

SCI does not support the proposed regulations' finalization and implementation of a modified procedure for the temporary export of firearms and ammunition by individuals who wish to travel outside the U.S. for recreational hunting and shooting purposes. The procedure requires travelers to use the Automated Export System (AES) to register their personal firearms and ammunition. This is an inappropriate and unworkable system for the individual who wishes to temporarily export his/her firearms. As an alternative, SCI requests that the proposed regulations be modified so that they delete the AES registration requirement and formalize and codify the Form 4457 process to ensure its consistency and use by all Customs and Border Protection (CBP) officials.

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms

July 9, 2018

Page 2 of 6

Safari Club International

Safari Club International, a nonprofit IRC § 501(c)(4) corporation, has approximately 50,000 members worldwide, many of whom are U.S. residents who travel with their firearms for hunting and recreational shooting around the world. They are individuals, not businesses, who seek only to bring their own property with them when they travel and return to the U.S. with that same property. Their activities are legal and are regulated by the countries they visit to hunt and shoot.

The Origin of the AES Registration Requirement

The export of firearms is controlled under the ITAR, which is administered by the U.S. Department of State, Directorate of Defense Trade Controls (DDTC). ITAR regulations have historically included an exemption under 22 CFR §123.17(c) allowing U.S. persons to temporarily export without a license up to three nonautomatic firearms and not more than 1,000 cartridges. This exemption is widely used by hunters and other sportsmen, who travel overseas with firearms to be used for sporting and other legal purposes. To use the exemption, the U.S. person must declare the firearms and/or ammunition to CBP, carry the firearms as part of their baggage, and not transfer ownership while abroad.

In 2011, DDTC published a Federal Register notice of proposed rulemaking that principally revised the exemption related to personal protective equipment, but also included a requirement that those traveling with firearms register through the Automated Export System (AES): “The person . . . presents the Internal Transaction Number from submission of the Electronic Export Information in the Automated Export System per §123.22 of this subchapter....” 76 Fed. Reg. 16353, 163534 (Mar. 23, 2011).

The system required those registering to provide an Employer Identification Number (EIN), available only to commercial enterprises. The registration system also involved procedures far too complicated and burdensome than necessary for individuals seeking only to travel with their personal equipment. Because the registration system imposed registration obligations that would have forced hunters and shooters to make false representations to the Internal Revenue Service, jeopardized their ability to obtain permits to import the wildlife they successfully hunted, and imposed burdensome obligations unnecessary and inappropriate for non-commercial importers, CBP agreed to postpone the implementation of the registration requirements and to continue the use of Form 4457 as the mechanism to facilitate temporary firearms export. Even that solution presented problems. Due to the inconsistencies in the way that CBP personnel issued the forms, U.S. residents have encountered difficulties in taking their firearms to foreign countries (e.g. South Africa) that attribute much greater significance to Form 4457 than does the U.S.

Collection of Data Through AES Registration is Inappropriate

Without good reason, the proposed regulations would reactive the AES registration requirement for individuals seeking to temporarily export their firearms and ammunition.

Consistent with the ITAR requirements previously applicable to temporary exports of the firearms and associated ammunition covered by this rule, [Bureau

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms

July 9, 2018

Page 3 of 6

of Industry and Security (“BIS”)] is proposing to modify § 758.1 of the EAR to make clear that exporters would continue to be required to file Electronic Export Enforcement (EEI) to the Automated Export System (AES) for transactions involving such firearms and associated ammunition that are otherwise authorized pursuant to License Exception BAG.

83 Fed. Reg. 24174. The purpose of the registration system is not to facilitate the temporary export and reimport of firearms and ammunition. According to CBP, the collection of export data through the registration is designed to help with the “compilation of the U.S. position on merchandise trade” and is an “essential component of the monthly totals provided in the U.S. International Trade in Goods and Services (FT900) press release, a principal economic indicator and a primary component of the Gross Domestic Product.” <https://www.census.gov/foreign-trade/aes/aesdirect/AESDirect-User-Guide.pdf>

The government has no need to collect this data. The data, provided by individuals who wish to temporarily export and then re-import the same personally owned equipment, has nothing to do with the “U.S. position on merchandise trade” or the “Gross Domestic Product.”

The only purpose for the collection of data from individual hunters who travel with their firearms is likely to enable the government to maintain records on these individuals and their legal activities abroad. In the proposed regulations, the BIS acknowledges that the intention of the AES filing system was to “track such temporary exports of personally-owned firearms and ammunition.” SCI strongly opposes this attempt to “follow” and retain records of the individuals who travel with their firearms for hunting purposes. These individuals have taken no actions meriting the government’s desire or need to collect and maintain data on their activities. The government should remove the requirement to collect such data.

The Proposed Regulations Recognize Flaws in the Registration System

The proposed regulations provide the public with the opportunity to comment on whether CBP has been able to remedy the problems identified when CBP first attempted to activate and implement the new requirement. The drafters also condition the reactivation of the AES registration requirement on CBP’s success in remedying the problems that plagued the introduction:

Whether and how BIS includes this requirement in a final rule would be based on whether CBP is able to update its processes, and other agencies as needed, to allow for individuals to easily file EEI in AES by the time a final rule is published. If CBP is not able to do so, then the final rule may direct exporters to continue to use CBP’s existing process, which is the use of the CBP Certification of Registration Form 4457, until a workable solution is developed or CBP suggests an alternative simplified solution for gathering such information for temporary exports of personally-owned firearms and ammunition. BIS will also take into consideration any public comments submitted on this aspect of the proposed rule regarding imposing an EEI filing requirement in AES, as well as

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms

July 9, 2018

Page 4 of 6

comments on the current practice of using the CBP Form 4457, as well as any other suggestions on alternative approaches for tracking such information.

83 Fed. Reg. 24174. AES registration should not be required as CBP has not remedied the problems that plagued the initial attempted implementation of the system.

The AES Registration System Requires Individuals to Provide False Information to the Internal Revenue Service

The AES registration system continues to require persons temporarily exporting firearms or ammunition to present “the Internal Transaction Number from submission of the Electronic Export Information in the Automated Export System.” The AES system requires an EIN before a user can submit any data. The Census Bureau administers the AES system, and their website still includes the following FAQ:

The Internal Revenue Service (IRS) site states that an Employer Identification Number (EIN) is for use in connection with business activity only. It further states, do not use your EIN in place of a Social Security Number. The information provided by the Census Bureau and the IRS is conflicting.

The IRS publication titled “Understanding Your EIN” which is located on their webpage (<http://www.irs.gov/pub/irs-pdf/p1635.pdf> [external link]) states that “...Employer Identification Number (EIN) is for use in connection with business activity only, do not use your EIN in place of a Social Security Number”.... However, for the purposes of registering or filing in the AES you can and should use your EIN. While it is not specifically stated, an EIN can be obtained for government reporting purposes when a person does not own a business.”

<https://www.census.gov/foreign-trade/regulations/ssnfaqs.html>. The Census Bureau site expressly tells individual exporters to ignore the IRS’s instructions and to misrepresent themselves as businesses, in order to obtain an EIN. The IRS site contains no instructions providing such an exception.

The Census guidelines instruct individuals to select “Sole Proprietorship” as the “type of legal structure applying for an EIN,” which is explained by IRS as: “sole proprietor includes individuals who are in business for themselves, or household employers.” The individual is further required to select “started a new business” as the reason why the sole proprietor is requesting an EIN. For an individual seeking to travel overseas with their firearms, this information is confusing, false and entered only to obtain the EIN.

As nothing has changed to remedy this problem since the AES registration requirement was originally imposed, the regulations should not include this requirement.

The AES Registration System is Designed for Commercial Operations and Is Overly Complicated for the Individual Exporter

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms

July 9, 2018

Page 5 of 6

Despite the years that have passed since CBP's attempt to require individuals to register through the AES system for the temporary export of their firearms, the agency has not made meaningful progress in reducing the overly complicated process for registration. The system is designed for businesses whose repeated use of the system merits the time and patience required for registration. The online AES Direct Users' Guide (which contains no reference to individuals, temporary export, or firearms) is a 39-page manual that an individual would be required to learn in order to register with the system. The registration mechanism is unnecessarily burdensome and complicated for the private individual who does not wish to participate in commercial trade but merely wants to temporarily take his own firearm with him outside the U.S. for a recreational hunt or shoot.

Individuals Identifying Themselves as a Commercial Enterprise Could Jeopardize Their Ability to Import Legally Hunted Animals

The requirement that individual hunters obtain an EIN, recognized by the IRS for business purposes only, could potentially jeopardize the ability of hunters to import some sport-hunted trophies from abroad. The U.S. Fish and Wildlife Service (FWS) prohibits the importation of many sport-hunted species for commercial purposes. A hunter who registers as a business for the purpose of leaving the country and exporting the firearms he plans to use to hunt outside the United States, risks the FWS prohibiting the hunter from importing his trophies and otherwise penalizing the hunter.

The AES Registration System Does Not Replace the Use of Form 4457

As mentioned above, the proposed regulations did not intend the AES registration requirement to replace CBP Form 4457 for the temporary export and reimport of personally owned firearms. Even with the AES registration requirement, temporary exporters of firearms and ammunition will still need to obtain and complete Form 4457 and display it upon re-entry into the U.S. to prove that they did not acquire the firearms abroad. Because (1) the AES registration requirement and its purpose of tracking the activities of law-abiding hunters and recreational shooters are neither necessary nor appropriate for the temporary export activities of hunters and shooters, and (2) these individuals will continue to need to obtain and display Form 4457, the logical solution would be to abandon the AES registration requirement, retain the Form 4457 practice, and improve the mechanisms for issuing the latter.

Future Use of Form 4457 Needs to Reflect the Greater Significance of the Document Outside the U.S.

While CBP has used Form 4457 as primarily a mechanism for determining whether the firearm being imported into the U.S. is the same property the individual exported when he or she left the country, other governments attribute greater significance to the document.

South Africa, for example, treats the form as a pseudo license of a U.S. resident traveling with a firearm. South African police have conditioned import of firearms into their country on the U.S. resident's possession of what South Africa considers to be a valid Form 4457. In 2017, this led

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms

July 9, 2018

Page 6 of 6

to problems for hunters traveling to South Africa when the CBP began issuing Form 4457s with already expired expiration dates. Although CBP explained that the agency attributes little meaning to the form's expiration date, South African officials considered the forms expired and prohibited hunters from entering the country with their firearms due to the apparent expired appearance of the forms.

The problem was exacerbated by different offices of CBP issuing different versions of the form, which also did not match the form available from CBP's website. After representatives of SCI and other organizations engaged in numerous discussions on the issue with CBP personnel, CBP adopted a temporary solution of issuing new forms with a future expiration date. CBP needs to adopt a more permanent solution that addresses the significance of the form in other countries, such as issuing forms without any expiration date.

SCI's Recommended Resolution and Revision of the Proposed Rules

SCI recommends that the drafters delete the AES registration requirement entirely for individuals and make it clear that registration is not required for those who wish to temporarily export their firearms from the United States. No tracking of the legal activities of these hunters and shooters should be conducted and no compilation of data about these individuals should be permitted. Instead, the drafters should formally codify the use of Form 4457 for individuals and should identify a single consistent standard for the form that contains no date that could be interpreted or misinterpreted by anyone as an expiration date.

Thank you for the opportunity to comment on these proposed regulations, and in particular to advocate for the removal of a process that should not be applied to individuals who wish only to temporarily export their firearms in order to engage in legal activities outside of the United States. If you have any questions or need anything further, please contact Anna Seidman, Director of Legal Advocacy Resources and International Affairs, aseidman@safariclub.org.

Sincerely,

Paul Babaz
President, Safari Club International

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

This proposed policy is especially bad in a time when the US government is turning away refugees flee violent conflict and violent gangs.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Giffords Exports Letter 7-9-18

July 9, 2018

SUBMITTED VIA FEDERAL E-RULEMAKING PORTAL

Director of Defense Trade Controls
U.S. Department of State
DDTCPublicComments@state.gov

AND
Regulatory Policy Division,
Bureau of Industry and Security,
U.S. Department of Commerce, Room 2099B
14th Street and Pennsylvania Avenue NW
Washington, DC 20230

RE: Docket Nos. DOS-2017-0046, BIS-2017-0004

ITAR Amendment -- Categories I, II, and III and Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control under the United States Munitions List (USML)

This comment is submitted on behalf of Giffords and Giffords Law Center (“Giffords”) in response to the Proposed Rules published by the Departments of State and Commerce on May 24, 2018 regarding the classification and administration of exports of certain firearms and ammunition. The Proposed Rules are complex and would represent a dramatic change in the regulatory structure governing firearm exports. We are concerned that the Proposed Rules may not adequately address our national security, foreign policy, international crime, or terrorism threats. In sum, we are concerned about potential loss of life. We also believe the Proposed Rules do not adequately address the need for transparency so Congress and the public may understand the impact of these Rules on potential weapons exports.

Giffords is committed to advancing common-sense change that makes communities safer from gun violence. Operating out of offices in San Francisco, New York, and Washington, DC, our staff partners with lawmakers and advocates at the federal, state, and local levels to craft and enact lifesaving gun safety laws, participate in critical gun-violence-prevention litigation, and educate the public on the proven solutions that reduce gun violence.

THE PROPOSED RULES APPEAR DRIVEN BY THE INTERESTS OF THE GUN INDUSTRY

Even the National Rifle Association (NRA) admits that the Proposed Rules were drafted with “the goal of increasing U.S. manufacturers’ and businesses’ worldwide competitiveness.” These Rules are “designed to enhance the competitiveness of American companies in the firearms and ammunition sectors,” allowing firearms and ammunition “to be subject to a more business-friendly regulatory climate.”¹

We are concerned that the Proposed Rules elevate the desire of American gun manufacturers to compete with international arms dealers over the danger that exported firearms will contribute to international gun crime and violence. The United States must not prioritize gun industry profits over human lives.

THE PROPOSED RULES WILL DRAMATICALLY CHANGE THE LAW, RISKING NEW LOOPHOLES

We are concerned that the Proposed Rules, by shifting firearms and ammunition from the United States Munitions List (USML) to the Commerce Control List (CCL), would weaken oversight over exports of these items. As even the NRA has acknowledged, “items on the USML controlled under ITAR are generally treated more strictly,” whereas regulation under the CCL “is more flexible.” The NRA has also admitted that license applications for items on the USML are subject to “more stringent vetting” than items on the CCL.²

The Departments of State and Commerce, in drafting the Proposed Rules, have made some efforts to ensure that exports of firearms and ammunition will still be subject to oversight. But the dramatic nature of the proposed changes, and the complexity of the Proposed Rules raise serious concerns about hidden loopholes. Some areas of potential concern include:

- Congressional notification and the methods for Congress to disapprove of proposed firearm exports;
- The extent to which the Commerce Department monitors the end-users of its products; and the extent to which Congress and the public have access to information about the results of this monitoring;
- The online posting of designs for the production of firearms, and their use in the 3D printing of untraceable firearms;
- Firearms training provided to foreign security forces;
- The reporting of political contributions by gun exporters and related entities;
- The Commerce Department’s bandwidth to properly oversee these exports; and
- The regulation of brokers who act as middlemen in firearms transactions, and the threat that firearms will be diverted by these middlemen to violent ends.

¹ National Rifle Association, *Trump Administration’s Proposed Rulemakings a Win-Win for America’s Firearms Industry, National Security*, <https://www.nra.org/articles/20180525/trump-administration-s-proposed-rulemakings-a-win-win-for-americas-firearms-industry-national-security>

² Ibid.

According to the State Department's Proposed Rules, "The Department of Commerce estimates that 4,000 of the 10,000 licenses that were required by the [State] Department will be eligible for license exceptions or otherwise not require a separate license under the EAR." This statement seems to directly contradict the statement in the Commerce Department's Proposed Rules that "BIS would require licenses to export, or reexport to any country a firearm or other weapon currently on the USML that would be added to the CCL by the proposed rule." The Commerce Department later clarifies, "The other 4,000 applicants may use license exceptions under the EAR or the "no license required" designation, so these applicants would not be required to submit license applications under the EAR." While we recognize that other forms of oversight may be available, this dramatic difference in the number of licenses raises our concern.

We are also particularly concerned that these changes will result in an increase in the number of untraceable firearms in circulation. As 3D printing technology becomes more widely available, the likelihood that it may be used to construct operable firearms that are exempt from serialization requirements increases. Under current law, the proliferation of 3D printed firearms is held in check by the Fifth Circuit's decision in *Defense Distributed v. U.S. Dep't of State*,³ which upheld the State Department's decision that the posting of online data for the 3D printing of firearms fell within the USML. The Proposed Rules would throw that determination into question.

Inadequate gun safety laws cost human lives. When gun purchasers are not properly vetted and laws against gun trafficking are not properly enforced, guns often fall into the wrong hands and are used to perpetrate horrendous crimes and violence. The U.S. experiences this loss of life on a daily basis, with over 90 people killed each day. We do not wish to see a similar effect on an international level from the weakening of our laws regarding gun exports.

THIS CHANGE LACKS SUFFICIENT CONGRESSIONAL NOTIFICATION REQUIREMENTS

We have not seen anything in the Proposed Rules that would continue Congressional notification requirements for any of the Category I firearms that are being moved to the CCL. There are several types of sales controlled under the Arms Export Control Act that require Congressional notification. Under current law, a certification must be provided to Congress prior to the granting of any license or other approval for transactions involving the export of a firearm controlled under Category I of the USML in an amount of \$1 million or more.⁴ Congress then has the ability to enact a joint resolution prohibiting the export, which would prevent the State Department from licensing the sale. Congress generally is given 15 days or 30 days to review the transaction before a license can be granted, depending on the items being exported and the

³ 838 F.3d 451 (5th Cir. 2016).

⁴ See 22 U.S.C. § 2776, 22 C.F.R. 123.15(a)(3).

country to which it is being exported. While there are Congressional notification requirements for certain products that are controlled under the CCL, it seems that such notification requirements would not be as broad that as under the USML.

Congress should continue to receive advance notification of transactions involving firearms and to have the opportunity to prohibit these exports when appropriate. The Proposed Rules should be strengthened to protect Congress's authority in this area.

THE CHANGE MAY RESULT IN LESS TRANSPARENT END-USE MONITORING

We are concerned about a possible reduction in the monitoring of the end-users of exported firearms and publicly available information about this monitoring. The State Department currently monitors the end-users of firearm exports through its Blue Lantern program. Public reporting of Blue Lantern information is mandatory⁵ and there are readily available statistics about the results. While the Commerce Department also conducts end use monitoring, there does not appear to be as fulsome a public reporting requirement for these end use checks as under the Blue Lantern program.

The Proposed Rules do not discuss end use monitoring of the items being moved to the CCL. It is reasonable to assume that these items will fall under the general Bureau of Industry and Security end use check program. This end use check program is not as well-publicized or as formal as the Blue Lantern program, and only a very small percentage of exported items are reviewed. If the Proposed Rules move forward, this program must be strengthened to address the need to monitor the end-users of exported firearms and provide the public with information about the results.

THIS CHANGE IGNORES THE MILITARY NATURE OF MANY FIREARMS

The Proposed Rules are based on an assumption that automatic firearms are designed for and used by the military, and semiautomatic firearms are not "inherently military." This is inaccurate. Consequently, we question the President's determination that semiautomatic firearms and ammunition no longer warrant control under the USML.

In fact, members of the U.S. armed forces routinely use firearms in semiautomatic mode in combat conditions, and the designs of many semiautomatic firearms are inherently military. Assault rifles like the AR-15 were originally designed for military use. Earlier models included a selective fire option that allowed service members to switch easily between automatic and semiautomatic modes. The military included the option to fire in semiautomatic mode because military combat sometimes requires use of a firearm in

⁵ 22 U.S.C. §§ 2785, 2394, 2394-1a

semiautomatic mode. Shooting in semiautomatic mode is more accurate and hence more lethal.⁶ In fact, some members of the military use the semiautomatic mode exclusively.

The fact that some gun enthusiasts “enjoy” shooting these weapons and have labeled this activity “modern sport shooting” or “tactical shooting” does not change the design or purpose of these firearms or the danger they pose in civilian hands. The horrendous rise in mass shootings our country has suffered and the frequency with which these firearms are used in these shootings testify to this danger.

Military-style semiautomatic firearms were used to perpetrate the tragedies that occurred in an elementary school in Newtown, Connecticut, at a music festival in Las Vegas, Nevada, at a workplace in San Bernardino, California, in a movie theatre in Aurora, Colorado, and at a high school in Parkland, Florida, among others. Because of the dangerous nature of these weapons, D.C. and seven states, including the populous states of California and New York, ban them.⁷ Because of the military nature and serious lethality of these weapons; they belong on the USML.

THERE ARE ALTERNATIVES TO THE PROPOSED RULES THAT HAVE NOT BEEN EXPLORED

The real concern that seems to be driving this significant change in the way the U.S. government regulates firearms exports is that firearms and ammunition manufacturers are currently required to register with the State Department and pay a registration fee. According to the NRA, “Any business that manufactures an item on the USML, or even just a part or component of such an item, also has to register with the State Department and pay an annual fee, which is currently set at \$2,250. This registration is required even if the manufacturer has no intent to ever export the items. ... Manufacturers of items on the CCL, or their parts or components, do not have to pay an annual registration fee to the Commerce Department.”⁸

The registration fee appears to be the NRA's primary concern with the current system for regulating the export of firearms and ammunition. The simple solution to this problem might be to waive the fee for manufacturers who do not, in reality, export these items. Waiving the fee would relieve industry of this “burden” without undoing the important policy choices made by the State Department in the regulation of these exports or requiring the Commerce Department to “reinvent the wheel” with respect to these regulations. While we would not necessarily support this proposal (it might shift the costs of manufacturer

Thank you to Mom's Rising for the following information and why I am against the rule change:

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I oppose the proposed rule for the following reasons. The proposed rule change:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

To Whom It May Concern:

At a time of instability in many areas of the world, this is a time to hold fast to the oversight role and responsibilities of the US State Dept. with regards to export of firearms. On May 24th President Trump proposed a new rule that would move this responsibility to the US Dept. of Commerce. This has potential negative consequences for our national security, international crime and terrorist threats. I strongly oppose any effort to move the monitoring of firearm exports from the State to the Commerce Dept. I further oppose any loosening of regulations of firearm exports as it would increase the risk of guns falling into the hands of terrorists and rogue nations.

Respectfully submitted,

Jeannine M. Coyne

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives. Gun sales should not be for profit as their sole purpose is to kill, but weapons of war certainly should not be sold around the world for profit.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake. I am opposed to the way this is being proposed.

Wepon Export

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as “non-military.” But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress’ proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government — i.e., taxpayers — will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]
5. The rule reduces end-use controls for gun exports. It would eliminate the State Department’s Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Government’s information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter’s history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

6. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.
7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.
8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.
9. This rule would transfer gun export licensing to an agency – the Commerce Department – whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.
10. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

General Comment

As the owner of a small gunsmithing operation in rural SC I urge you to transfer control of small firearms and ammunition from the State Department to the Commerce Department. It is imperative to my business that we roll-back the horrible rules that you updated in July, 2016. Effective 22 July 2016, gunsmiths suddenly found themselves subject to the regulatory authority of the Arms Export Control Act (AECA) as administered by the State Departments Directorate of Defense Trade Controls (DDTC). Regulators suddenly determined that traditionally routine gun repair and enhancement services now constitute firearms "manufacturing" and mandatory registration of my small, home-based business under International Traffic in Arms Regulations (ITAR). Tis ITAR directive advises gunsmiths to stop what they are doing and pay up or face fines and prison! (Violations under the ITAR can bring civil penalties of \$500,000 per violation and criminal penalties of up to \$1 million per violation along with up to 20 years in prison).

These rules are terribly confusing. I submitted some very direct questions to you and have never received a reply. I developed a list of typical customer service requests that raise concern with respect to ITAR registration. Specifically, I requested your determination on these examples:

- 1) Drilling, threading and installing sling swivels on rifle forend (and buttstock) for sling and/or bipod (requires drill press and screw threading)
- 2) Fabricating replacement parts - such as firing pins for rifles and pistols (requires lathe turning, milling, grinding, and polishing)
- 3) Installation of Cominoli safety special option on Glock pistols (requires cutting of frame slot with Foredom tool and fixture)
- 4) Rifle barrel setback - to correct headspace and service misfire issues (requires lathe and chambering reamer)
- 5) Slide and frame milling and cuts adding cocking serrations for improved handling, chamfering and dehorning for concealed carry, and enhanced eye appeal (requires mill, surface grinder)
- 6) Installation of gunsmith fit barrel - for accuracy upgrade or to address headspace issues (requires milling and/or TIG welding of hood and foot to precise fit)
- 7) Installation of scope mount on early rifles - for hunting, competitive shooting, and sporterizing

(requires drilling and tapping of mounting holes)

8) Re-crowning barrel - to improve or repair rifle accuracy (using lathe)

9) Installing 1911 Beavertail - to improve comfort and aim (requires precision cutting of frame, typically with mill)

10) Installing Sako-style extractor on Remington Model 700 rifle - primarily for improved reliability (requires milling and drilling of rifle bolt)

The above are, I think, a typical sampling of services that might reasonably be encountered in any gunsmith practice. Under State Department export control rulings all the above would likely constitute manufacturing and are illegal under ITAR absent payment of a large export fee. I urge you to transfer administration over to the Department of Commerce.

Obviously, the ITAR fee is a significant burden on a small gunsmith shop and will be an important factor in determining the viability and directions of my planned endeavor. I am hopeful that you will properly transfer administration and governance to the Commerce Department.

General Comment

I am a former Los Angeles County Deputy District Attorney and a lawyer who has practiced law for over 30 years and represented local governments seeking to address gun violence in their jurisdictions. I serve on the American Bar Association's Standing Committee on Gun Violence and in that capacity have worked on nationwide gun violence prevention issues. I am opposed to the proposed rule changes because both individually and collectively they greatly increase the risk of illegal firearms trafficking in this country and abroad. Small arms are already trafficked at an alarming rate into embargoed countries and into countries where they are used in conflicts in which children have been forced to be soldiers. (1) The proposed Treatment of semi-automatic assault rifles as "non-military" despite their use by U.S. troops and their use in non state and state armed conflicts, their easy conversion to fully automatic firearms, and their prohibition under the laws of many U.S. states and other countries, is contrary to the statutory framework enacted by Congress to regulate export of firearms. (2) The proposed rule would eliminate Congressional oversight for important firearms export deals and removal of Congressional oversight is directly contrary to the congressional intent of the statutes the proposed rule is meant to implement. (3) The proposed rule changes would relieve gun manufacturers of the cost of processing their licenses and imposed on taxpayer. (4) The proposed rule changes moving many approval functions out of the State Department to Commerce reduces control over firearms exports by eliminating the State Department's Blue Lantern program and the oversight that the State Department has been able to effect in denying licenses to international human rights violators through the registration system and its database. (5) The proposed rule changes enable unchecked firearms production in the U.S. and exports by removing the block on 3d printing. (6) The proposed rule changes transfer firearms export regulation to Commerce whose primary mission is to promote trade, which is contrary to congressional intent with respect to the statutes governing export of firearms. Firearms are used to kill thousands of people every year in acts of organized crime, drug trafficking, and human rights violations. We need more controls over the export of these weapons, not less.

The changes that are proposed here will make it easier to transfer highly lethal weapons into the hands of people who may use them against defenseless civilians worldwide as well as, ultimately, against the United States and its citizens. It appears to have been written for the benefit and enrichment of manufacturers of arms, not for the benefit of the American people. Please reject these proposed changes.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I am a retired teacher who had to go through numerous lock-down drills with my students. How horrible that students and teachers now must be afraid for their safety due to the accessibility of firearms. This never occurred when I was a child, nor when my children were young. It started in the mid-90's and it has only grown worse. It is appalling.

General Comment

I am an individual who happens to work for a USML I firearms manufacturer, & am one of the principal members of its Compliance Department. I am not authorized to speak on behalf of my company, but will comment as an individual who has had "direct contact" with the ITAR, 7 days a week for the past 6 years.

In the years that I have interfaced with the firearms licensing unit of the DDTC for my applications, I have had relatively few problems and have been witness to some amendments which have resulted in positive changes. In terms of the everyday reality of working within this system, the ability to track the status of licenses in ELISA and if need be communicate directly with the licensing agent assigned to the application has been a productive process. I have also learned a great deal from working with the personnel of the DDTC unit charged with handling Category I firearms and accessories applications. The unit has proven to be both knowledgeable and helpful in achieving my licensing goals. Other than the occasional EAR99 shipment, my involvement with the BIS regulations has been minimal and I have yet to utilize the SNAP-R system, so I cannot directly judge exactly what real improvements would result from this migration, if any. The devil you know is often preferable to the one you don't.

Given that the licensing process under this proposed migration from DDTC to Commerce will still involve inter-agency review and the same staffing out to DOD and State Dept. Agencies, I don't see a clear indication of improvement, especially not in terms of processing times. This change represents a shift from one entity receiving an application to another. (Yes, we will save a few thousand dollars in registration fees.) The metric cited of 43.8 minutes for a BIS application vs. 60 minutes for DDTC application and the extrapolations of that metric to conclude a result of major savings fails to capture the true cost of the existing process or any nuances of how the process actually works. It certainly does not address the substantial burden created by the proposed the data capture for AES filing which will be amended to include make, model, and serial number.

The migration of non and semi-automatic firearms from USML I to BIS 0A501 will also initially create a substantial burden in terms of time and money for reclassifying product, retraining personal and revising all the SOPs associated with our exporting processes. I am not seeing a demonstrated case of either paperwork reduction or person-hour savings. Complicating the AES process at the end of the exporting chain is going to increase burdens for companies and place more burden on an already overloaded CBP. I do see areas where relief could and should be granted. While the change from the fee-based registration

and licensing structure of State to the no-fee structure of Commerce, will provide much needed relief for smaller companies, I have to believe that simply changing the definition of a manufacturer by including a minimum size requirement for registration could easily produce the same result and reduce the number of small businesses which are currently being caught in the net of the existing manufacturing definition and its fees which they cannot easily afford.

Also, major improvement could be easily achieved by raising value of the exemption in 123.17(a) from \$100 to \$500. While the proposed changes within LVS do increase this amount, they then reduce it by shifting the definition of value from wholesale to selling price, thus giving with one hand while taking away with the other. Permitting the export of receivers and breech mechanisms could be achieved by simply amending the "Canadian Exemption" within the ITAR. Also helpful, would be an increase in wholesale value from \$500 to \$1000 for Canada. The proposed LVS change with its "selling price" definition is not genuine relief.

I appreciate the reduced controls on technical data and the elimination of the concept of defense services which would be achieved by the migration, but given that there has been relatively little substantive change in basic firearms technology over the decades, a simple amendment to or exemption from the existing controls for firearms technology within the ITAR could likely achieve the same result without having to totally move to a new process. (I have watched competitors place manuals online-which we believe to be in violation of ITAR regulations-without repercussion.) A change in this area would level the playing field and eliminate an unfair competitive advantage and also improve our ability to market and repair firearms. Likely this type of improvement could be achieved without a major overhaul of the entire system.

In conclusion, speaking as someone who deals with ITAR functionality, I am quite certain positive relief could be achieved by judicious and minimal amendment to what already exists as opposed to a major overhaul which is certain to create a messy transition.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

We support the Export Control Reform Initiative reforms that have been implemented to date. These changes have rationalized and streamlined a cumbersome and opaque U.S. Munitions List (USML) in ways that make it more useful for American exporters and make non-militarily-sensitive exports easier to process and more competitive internationally.

However, the Department of State has published draft regulations that would remove small arms, light weapons, and associated equipment and ammunition from Categories I, II, and III of the International Trafficking in Arms Regulations, to be subject instead to the Commerce Control List (CCL) of the Department of Commerce. This will result in less rigorous oversight of the export of these deadly weapons.

Small arms and associated ammunition are uniquely lethal; they are easily spread and easily modified, and are the primary means of injury, death, and destruction in civil and military conflicts throughout the world. As such, they should be subject to more not less rigorous export controls and oversight. We strongly oppose any changes to Categories I, II, and III that do not adequately reflect the life-and-death impact such changes will have, including by maintaining congressional oversight over these sales before export. Specifically, combat rifles, including those commonly known as sniper rifles should not be removed from the USML, nor should rifles of any type that are U.S. military-standard 5.56 (and especially .50) caliber. Semi-automatic firearms should also not be removed, and neither should related equipment or ammunition or associated manufacturing equipment, technology, or technical data.

The Arms Export Control Act (AECA) enables congressional review of exports of these articles to ensure that they comport with U.S. foreign policy goals and values. Congress took action in 2002 to ensure that the sale and export of these weapons would receive close scrutiny and oversight, including by amending the AECA to set a lower reporting threshold (from \$14 million to \$1 million) specifically for firearms on the USML. Moving such firearms from the USML to the CCL, as is being proposed, would be directly contrary to congressional intent, made clear in 2002, and would effectively eliminate congressional oversight of exports of these weapons.

Congressional oversight has proven important on multiple occasions. Over the last several years, the Executive branch has considered and proposed sales to countries and foreign entities that have engaged in human rights abuses and atrocities. In May 2017, for example, the Administration sought to sell semi-automatic pistols to the bodyguard unit of President Erdogan of Turkey, despite the fact that members of that unit had viciously attacked peaceful protestors near the Turkish Embassy in Washington, DC. The sale was only halted because congressional notification was required by law. In addition to the proposed Turkey sale, State proposed the export of 27,000 automatic rifles to the Philippine National Police in August 2016, some members of which have been credibly alleged to have committed extrajudicial killings as part of President Duterte's so-called war on drugs, which has targeted mostly low-level drug users.

The Departments of State and Commerce have noted that State will still review the sales for human rights concerns if licensing is moved to the CCL. However, as demonstrated by the above examples, State has at times fallen short of its responsibility to prioritize such concerns in its consideration of such sales. Therefore, while we oppose this transfer of licensing authority to the Department of Commerce, we will also seek to ensure that congressional oversight is maintained if the proposal is implemented.

Transferring the regulation of exporting firearms to the Commerce Depart makes the sale of firearms about money rather than safety. History has shown time and again that US exported firearms will be used against US citizens here and abroad.

Here are some of the many reasons rational people are opposed to this change:

- *Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- *Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- *Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- *Eliminates Congressional oversight for important gun export deals.
- *Removes statutory license requirements for brokers, increasing risk of trafficking.
- *Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- *The Commerce Department does not have the resources to enforce export controls.
- *Reduces transparency and reporting on gun exports.
- *Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

The State Department is the appropriate agency to regulate the exporting of firearms. The Commerce Depart is not.

Greetings from Cincinnati, Ohio

I am James A. Myres, I served in the U.S. Coast Guard (1966-70), I am currently 73 years old and I am a Franciscan. I can not understand how you can consider transferring control of the export of firearms to the Department of Commerce's Bureau of Industry and Security. This will directly put members of the U.S. military in harms way and will put U.S. citizens traveling abroad in harms way. Our own gun manufacturers will be killing U.S. citizens.

Firearms are used to kill a thousand people every day around the world, this policy will just make it easier for the "bad guys" to get their hands on weapons that rival what our military uses. This may create hundreds of jobs but at what cost?

Military firearms are specifically useful in acts of organized crime, political violence, terrorism, and human rights violations. We can certainly supply these weapons but is it the right thing to do? I personally do not think it is. We would be better off as individuals and as a country supporting the middle class in third world countries, not corrupt ruling classes or lawless gangs operating in the name of the governments.

The types of weapons being transferred to Commerce control, including military-style assault rifles and their ammunition, these are weapons of choice for criminal organizations in Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. These weapons and the violence they bring are driving our immigration crisis.

The export of these weapons should be subject to more controls, not less.

Peace

Jim Myres, OFS

General Comment

I am against the proposed rule change to make it easier for U.S. gun manufacturers and dealers to export guns and ammunition globally. This rule would basically be helping to arm those who want to do Americans harm; exported guns and ammunition will almost certainly fall into the hands of terrorist groups, criminal organizations, human rights abusers, and other dangerous groups. Given world events, how can we even consider shipping more arms abroad? The profit gains for American gun and ammunition manufacturers is simply not worth the risk.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

It is dangerous and foolhardy to treat weapons as simple commodities to be sold on the open market. Do we really want to arm any faction that can pay? This proposal is based rooted in greed and eliminates sound policy assessment. While 3D printing of firearms may not be preventable in the long run, it is wantonly careless to enable it. Nothing in this proposed rule change reflects sound judgement.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. I object to the proposed rule change. I believe the types of firearms exports currently under the control of the U.S. Department of State should remain so, because if the new rule were to take effect, Congress would no longer be automatically informed of the exports of large amounts of weaponry to foreign countries even foreign countries with horrendous human rights records.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit the retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively

condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I am opposed to loosening regulations related to the export of firearms. This is so dangerous, who could be for this, except those who are in the gun manufacturing industry and others who stand to make money from it? Given our national security concerns and in this age of international terrorism, loosening regulations on the export and sale of firearms is just about the worst thing we could do. This measure could potentially increase the chance of dangerous weapons ending up in the hands of international criminals. I do not think this proposal adequately addresses our interests with regards to national security, foreign policy, international crime and terrorist threats. The administration should NOT move forward with this reckless proposal.

General Comment

I am writing to oppose the proposed rule that would shift the responsibility of monitoring exports and import of firearms and ammunition from the State Department to the Department of Commerce. The shift would change a lot of current programs and make it far easier for weapons to be exported and divert to areas of conflict throughout the world. The State Department has a mission to reduce arms trafficking and promote peace and has successfully been doing this for years. The Commerce Department is by its name interested in increasing commerce. That is important but not in the area of providing more firearms, including semi-automatic weapons, to countries where they can be easily diverted into areas of conflict.

For instance, taking this monitoring out of the State Department would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. And It would remove licensing requirements for brokers, increasing the risk of trafficking.

It might also have an adverse effect on controlling the 3D printing of firearms. Why would we want to make it easier for gun traffickers and terrorist to get weapons. For the safety of our armed forces and our citizens we should keep the monitoring of exports/imports and of weapons brokers in the Department of State.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would allow firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

The State Departments Blue Lantern program would be eliminated, which has been in effect since 1940. The Blue Lantern programs carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. If Commerce were responsible for exporting of firearms, then public would likely not know any information about these firearms -- what firearms are going to which countries, regimes, etc. Licencing requirements would be removed for brokers increasing the risk of trafficking -- again what firearms to which countries/regimes.

Another issue is that 3D printing of firearms would be allowed, enabling 3D printing of firearms in the US and around the world.

If firearms regulations remain with the State Department, then Congress can oversee their sales, block sales of large batches of firearms to foreign countries. Congress would not be automatically informed about weapons sales, could not stop exports for national security concerns or to countries where there are serious human rights concerns.

The world would be a more dangerous place if Commerce were to have oversight of firearm exports.

General Comment

I strongly oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world.

The rule change increases the profits to the American gun industry while the entire world pays the cost in lives!

If this is enacted, America's reputation will be further tainted from spreading violence. Please do not move this oversight from the State Department.

Thank you.

General Comment

I oppose transferring regulation of firearms exports from the State Dept to the Commerce Dept. The political and humanitarian consequences of arms sales are far too grave to not subject these sales to foreign policy review. The free market is designed to be impervious to these important considerations, and is therefore inadequate to protect US interests.

General Comment

I oppose the transfer of oversight of firearms export from the state to commerce department. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

General Comment

Firearms are a matter of security not of commerce. Let the state department handle matters of security and the sales of firearms rather than transferring that oversight to commerce.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

For the following reasons I strongly protest the following provisions of The U.S. Department of State (DOS) Proposed Rule: International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III : This proposal

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I object to the proposed changes in the International Traffic in Arms Regulations: U.S. Munitions List, Categories I, II, and III because I believe it will be more dangerous for our troops, U.S. Border Patrol and our Coast Guard. I want to know what the Defense Department thinks of taking regulation of these currently tightly restricted weapons sales and licensing of dealers away from the State Department and transferring this responsibility to the Commerce Department whose main goal is to making it easier to trade in these lethal weapons. For example, we now have troops in every country in Africa. We are fighting nonstate groups, paramilitary forces, terrorist organizations, and individuals waging war on the citizens and government security forces in Africa now. In Mexico, Central and Latin America, refugees are fleeing violence and terror from rich and powerful Narco groups and corrupt police and ineffectual governments. What do our neighbor countries and allies think of the changes will put more weapons into the hands of thugs and despots internationally? Permanent wars are profitable for arms dealers. I now understand what was at stake in keeping assault rifles and high capacity magazines available for sale in the U.S. Domestic market.. they can now be classified as nonmilitary and trafficked internationally. That is the payback for the \$30,000,000 investment in the 2016 election. I do no agree that profits for arms dealers supersede the security of our own children, citizens and security forces. I will continue to stand up for the lives of my grandchildren and to build a better future for them as citizens of this country and the world.

Organization: BORDERVIEW International Firearm Logistics

General Comment

BORDERVIEW appreciates the opportunity to comment on the long-awaited transition of firearms and related items from the jurisdiction of the Department of State to the Department of Commerce. We have closely followed the efforts since the early days of the Obama administration to complete this phase of Export Control Reform, and applaud the publishing of these proposed rules.

Broadly speaking, we are very supportive of the proposal and would like to underscore the well-laid justifications made in your proposed rule, and the companion Department of Commerce proposed rule, in addition to the 'Myths vs. Facts' release posted on your website. BORDERVIEW looks forward to your publishing of the Final Rule and completion of these longstanding and bipartisan efforts to simplify our nation's export control infrastructure to better control the most military-sensitive items, while maintaining appropriate controls on Dual Use items such as firearms.

We submitted a detailed comment letter to the U.S. Department of Commerce as their proposed rules would cover a supermajority of our sporting firearm export activity going forward. Nonetheless, we offer here our affirmation of the broad transition affected by these companion rules. Furthermore, we encourage a split effective date where a delayed effective date of 180 days is given so larger companies can align IT systems, etc, and an immediate effective date is allowed for smaller companies or those prepared to make the immediate shift to the EAR. This would directly impact smaller companies and especially those non-exporting companies such as gunsmiths required to register under the ITAR, who may be facing costly renewals during an extended delayed effective period. While not standard practice, there is precedent in the July 2014 notice of FR 79 37535, which gave two effective dates for that Final Rule.

Regardless of the effective date published in the Final Rule, we respectfully request that DDTC and BIS complete their review of comments and publish a Final Rule as soon as is reasonably possible. Given the long-awaited nature of these rules, prompt publishing of the Final Rule after appropriate review and consideration of all relevant comments by impacted parties would be greatly appreciated and beneficial to both industry and government.

The justification provided is clear and absolutely sensible. This is not a de-controlling as some are wrongly asserting. Regardless of recent politicization by some in Congress and the media, this has truly been an historic bipartisan effort over many years, starting in the earliest days of the Obama administration and now coming to fruition under the current administration.

Thank you for your consideration and we look forward to review of the final rule.

I strongly urge the State Department to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing one thousand people around the world every day, we certainly should be making it harder, not easier, to export U.S. made weapons of war.

I oppose this proposed rule that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Moving the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

Dear U.S. Department of State,

I am a U.S. Citizen and oppose the transfer of gun exports to the Commerce Department.

This transfers the cost of license processing to taxpayers and removes statutory license requirements for brokers, increasing The risk of trafficking and decreasing the tracking of mass weapon accumulation.

This reduces or eliminates end-use controls, such as State Department's Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since 1940's.

This says semi-automatic weapons are not military weapons yet these are the weapons used by military around the world and are used in massive world conflicts that harm millions of people.

The Commerce Department does not have the resources nor expertise to enforce export controls, even now. They will not be able to enforce tracking necessary for mass weapon sales.

This reduces the transparency and reporting on gun exports.

This transfers gun export licensing from agency with a mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade and profit.

This is not a move in the best interest of U.S. safety and citizens. It is in the interest of gun manufacturers whose mission is to boost sales at the risk of lives and stability.
